AERONAUTICAL ENGINEERING

A CONTINUING BIBLIOGRAPHY WITH INDEXES

(Supplement 223)

A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in January 1988 in

- *Scientific and Technical Aerospace Reports (STAR)*
- *International Aerospace Abstracts (IAA).*

Scientific and Technical Information Division 1988
National Aeronautics and Space Administration
Washington, DC

This supplement is available from the National Technical Information Service (NTIS), Springfield, Virginia 22161, price code A07.

INTRODUCTION

This issue of *Aeronautical Engineering -- A Continuing Bibliography* (NASA SP-7037) lists 423 reports, journal articles and other documents originally announced in January 1988 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA)*.

The coverage includes documents on the engineering and theoretical aspects of design, construction, evaluation, testing, operation, and performance of aircraft (including aircraft engines) and associated components, equipment, and systems. It also includes research and development in aerodynamics, aeronautics, and ground support equipment for aeronautical vehicles.

Each entry in the bibliography consists of a standard bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged by the first nine *STAR* specific categories and the remaining *STAR* major categories. This arrangement offers the user the most advantageous breakdown for individual objectives. The citations include the original accession numbers from the respective announcement journals. The *IAA* items will precede the *STAR* items within each category.

Seven indexes -- subject, personal author, corporate source, foreign technology, contract number, report number, and accession number -- are included.

An annual cumulative index will be published.

Information on the availability of cited publications including addresses of organizations and NTIS price schedules is located at the back of this bibliography.

TABLE OF CONTENTS

	Page
Category 01 Aeronautics (General)	1
Category 02 Aerodynamics Includes aerodynamics of bodies, combinations, wings, rotors, and control surfaces; and internal flow in ducts and turbomachinery.	2
Category 03 Air Transportation and Safety Includes passenger and cargo air transport operations; and aircraft accidents.	19
Category 04 Aircraft Communications and Navigation Includes digital and voice communication with aircraft; air navigation systems (satel- lite and ground based); and air traffic control.	19
Category 05 Aircraft Design, Testing and Performance Includes aircraft simulation technology.	23
Category 06 Aircraft Instrumentation Includes cockpit and cabin display devices; and flight instruments.	25
Category 07 Aircraft Propulsion and Power Includes prime propulsion systems and systems components, e.g., gas turbine engines and compressors; and onboard auxiliary power plants for aircraft.	28
Category 08 Aircraft Stability and Control Includes aircraft handling qualities; piloting; flight controls; and autopilots.	35
Category 09 Research and Support Facilities (Air) Includes airports, hangars and runways; aircraft repair and overhaul facilities; wind tunnels; shock tubes; and aircraft engine test stands.	39
Category 10 Astronautics Includes astronautics (general); astrodynamics; ground support systems and facilities (space); launch vehicles and space vehicles; space transportation; space communications, spacecraft communications, command and tracking; spacecraft design, testing and performance; spacecraft instrumentation; and spacecraft pro- pulsion and power.	40
Category 11 Chemistry and Materials Includes chemistry and materials (general); composite materials; inorganic and physical chemistry; metallic materials; nonmetallic materials; propellants and fuels; and materials processing.	40

Category 12 Engineering	43
Includes engineering (general); communications and radar; electronics and electrical engineering; fluid mechanics and heat transfer; instrumentation and photography; lasers and masers; mechanical engineering; quality assurance and reliability; and structural mechanics.	
Category 13 Geosciences	57
Includes geosciences (general); earth resources and remote sensing; energy production and conversion; environment pollution; geophysics; meteorology and climatology; and oceanography.	
Category 14 Life Sciences	57
Includes life sciences (general); aerospace medicine; behavioral sciences; man/system technology and life support; and space biology.	
Category 15 Mathematical and Computer Sciences	58
Includes mathematical and computer sciences (general); computer operations and hardware; computer programming and software; computer systems; cybernetics; numerical analysis; statistics and probability; systems analysis; and theoretical mathematics.	
Category 16 Physics	61
Includes physics (general); acoustics; atomic and molecular physics; nuclear and high-energy physics; optics; plasma physics; solid-state physics; and thermodynamics and statistical physics.	
Category 17 Social Sciences	62
Includes social sciences (general); administration and management; documentation and information science; economics and cost analysis; law, political science, and space policy; and urban technology and transportation.	
Category 18 Space Sciences	N.A.
Includes space sciences (general); astronomy; astrophysics; lunar and planetary exploration; solar physics; and space radiation.	
Category 19 General	62
Subject Index	A-1
Personal Author Index	B-1
Corporate Source Index	C-1
Foreign Technology Index	D-1
Contract Number Index	E-1
Report Number Index	F-1
Accession Number Index	G-1

The Highly Maneuverable Aircraft Technology (HiMAT) program consisted of design, fabrication of two subscale remotely piloted research vehicles (RPRVs), and flight test. This technical memorandum describes the vehicles and test approach. An overview of the flight test results and comparisons with the design predictions are presented. These comparisons are made on a single-discipline basis, so that aerodynamics, structures, flight controls, and propulsion controls are examined one by one. The interactions between the disciplines are then examined, with the conclusions that the integration of the various technologies contributed to total vehicle performance gains. An assessment is made of the subscale RPRV approach from the standpoint of research data quality and quantity, unmanned effects as compared with manned vehicles, complexity, and cost. It is concluded that the RPRV technique, as adopted in this program, resulted in a more complex and costly vehicle than expected but is reasonable when compared with alternate ways of obtaining comparable results.

TITLE → **SYNTHESES OF REDUCED-ORDER CONTROLLERS FOR ACTIVE FLUTTER SUPPRESSION**

AUTHORS → ATSUSHI FUJIMORI and HIROBUMI OHTA Japan Society for ← JOURNAL TITLE
Aeronautical and Space Sciences, Journal (ISSN 0021-4663), vol. 35, no. 402, 1987, p. 353-362. In Japanese, with abstract in English. refs

Reduced-order controllers for active flutter suppression of a two-dimensional airfoil are studied using two design approaches. One is based on the generalized Hessenberg representation (GHR) in the time domain, and the other, called the Nyquist frequency approximation (NFA), is a method in the frequency domain. In the NFA method, the reduced-order controllers are designed so that the stability margin of the Nyquist plot may be increased over a specific frequency range. To illustrate and to make a comparison between the two methods, numerical simulations are carried out using a thirteenth-order controlled plant. It is to be noted that the GHR method can yield quasi-optimal controllers in the sense of minimizing quadratic performance indices. The designed controllers, however, do not have enough stability margin, and the order reduction resulting from full state controllers may not be satisfactory. On the other hand, reduced-order controllers in the NFA method can be designed with increased stability margin at the expense of the performance index. For all simulation cases, the NFA method yields second-order controllers with a better stability margin than those by the GHR method. Thus, the NFA method provides an effective method for synthesizing robust reduced-order controllers.

AERONAUTICS (GENERAL)

A88-10370#

AN ORIENT EXPRESS TO CAPTURE THE MARKET

RICHARD DEMEIS Aerospace America (ISSN 0740-722X), vol. 25, Sept. 1987, p. 44-47.

The development of a high-speed aircraft for travel to the Orient is discussed. The economic benefits and commercial applications for an SST are investigated. A number of designs for an SST are presented and analyzed; fuel, safety, and environmental concerns are addressed. The National Aerospace Plane and the X-30 project are examined. I.F.

A88-10657

NEW SOVIET HELICOPTER TECHNOLOGY AND ITS POTENTIAL FOR INDUSTRIAL USE [NEUE SOWJETISCHE HUBSCHRAUBERTECHNIK UND DEREN EINSATZPERSPEKTIVEN IM INDUSTRIEFLUG]

EKKEHARD SCHEER (Interflug Gesellschaft fuer Internationalen Flugverkehr mbH, Berlin, German Democratic Republic) Technisch-oekonomische Information der zivilen Luftfahrt (ISSN 0232-5012), vol. 23, no. 3, 1987, p. 113-116. In German.

The new Soviet helicopters Ka-32 and Mi-26 are described, and the potential spectrum of their uses in the economy of the DDR is considered. The configurations, components, and equipment of these helicopters are described, their particular advantages are mentioned, and the values of their parameters are listed in comparison with those of the Mi-8. The applications of the helicopters in the construction of facilities for energy generation, harbors and coastal facilities, dams, traffic facilities, coal burning plants, and factory construction and reconstruction are discussed. C.D.

A88-10877

ANTI-TANK HELICOPTERS FOR THE RICH AND NOT SO RICH

MARK LAMBERT Interavia (ISSN 0020-5168), vol. 42, Sept. 1987, p. 921-923, 925, 926.

Current designs and characteristic features of antitank helicopters are discussed. The new and improved capabilities and designs of helicopters manufactured by various companies are described. Particular consideration is given to the location of sights for launching TOW and HOT missiles, observation sights, and light antitank helicopters such as the TOW-firing 500MD and the 406 Combat Scout. I.F.

A88-11672

SCHEDULED MAINTENANCE PROGRAM HELPS DELTA MAINTAIN QUALITY

LENA NIRO Materials Evaluation (ISSN 0025-5327), vol. 45, Sept. 1987, p. 1054-1056.

Delta's quality control program and their Technical Operations Center in Atlanta are described. Magnetic particle, fluorescent penetrant, radiographic isotope, high- and low-frequency eddy

current, and ultrasonic inspection techniques are used at the center; the advantages of these NDT for detecting surface defects are examined. The use of a preventive (scheduled) maintenance concept to maintain engines and aircraft is discussed. I.F.

DESIGN AND FABRICATION TRIAL OF A COMPOSITE FLAP STRUCTURE

KENZO TAKASAKI, NOBUKAZU YANAI, ISAO ISHII, and NAOHITO TSUDA Japan Society for Aeronautical and Space Sciences, Journal (ISSN 0021-4663), vol. 34, no. 394, 1986, p. 614-618. In Japanese.

The design and fabrication trial of the composite flap structure of a medium-size commercial transport aircraft are described. An integrated fabrication method involving the combination of steel and rubber components is applied to the construction of the flap structure. The integrated composite structure results in a lightweight and low-cost design as compared with the honeycomb sandwich structure. S.H.

THE HISTORY OF AEROELASTICITY RESEARCH IN GERMANY FROM THE BEGINNING UNTIL 1945

PETER BUBLITZ Dec. 1986 319 p In GERMAN; ENGLISH summary Report will also be announced as translation (ESA-TT-1082)

(DFVLR-MITT-86-25; ISSN-0176-7739; ETN-87-90444) Avail: NTIS HC A14/MF A01; DFVLR, Cologne, West Germany DM 98

Twenty years elapsed between the beginning of powered flight and the comprehension of such aeroelasticity problems as static divergence and flutter. The way in which the first aeroelasticians overcame the difficulties and founded this field of research is described. ESA

N88-10986# Joint Publications Research Service, Arlington, Va. ENSURING THE SERVICE LIFE OF DESIGNS (EXPERIENCE IN AIRCRAFT CONSTRUCTION)

A. F SELIKHOV and ZHUKOVSKIY In its USSR Report: Engineering and Equipment p 1-11 4 May 1987 Transl. into ENGLISH from Mashinovedeniye (Moscow, USSR), no. 5, Sep.-Oct. 1986 p 11-18

Avail: NTIS HC A07/MF A01

The high cost of an aircraft makes it necessary to operate it for 20 to 25 years with ever increasing intensity. Increasing requirements on weight improvement, a significant level of variable loads, long service life and large number of functional and loading cycles results in the fact that the service life of the main load bearing structure of an aircraft is limited, i.e., the design may exhaust its load carrying capacity prematurely. The most frequently encountered and most hazardous due to unexpected causes of possible cessation of operation is structural fatigue due to exhaustion of its load carrying capacity and initial production defects and also damage caused by corrosion and wear. Criteria are enumerated which place limitations on providing the required service life of the design with minimum expenditures of mass. The typical distribution of service life of a design before the first damage in operation is shown. The measures which must be implemented during the very beginning of design, during

02 AERODYNAMICS

manufacture of the aircraft and reliability before beginning of design are briefly discussed. E.R.

02

A NUMERICAL METHOD FOR SUBSONIC UNSTEADY LIFTING SURFACES - BIS. III - SOME ADDITIONAL NUMERICAL RESULTS

MASAMI ICHIKAWA and SHIGENORI ANDO Japan Society for Aeronautical and Space Sciences, Journal (ISSN 0021-4663), vol. 35, no. 402, 1987, p. 339-345. In Japanese, with abstract in English. refs

This paper presents some additional numerical results to previous papers concerning a new computation method for unsteady subsonic lifting surfaces, BIS (box-in-strip). It consists of two parts. One is a comparison between BIS and PCKFM (piecewise continuous kernel-function method); the other is a comparison between BIS and analytical solutions for circular and/or elliptic planform wings in steady incompressible flow. As a result, it is found that PCKFM yields fairly close results to BIS in the case of the rectangular wing with $AR = 10$ and that correlation between BIS and analytical solutions is much better than in the case of VLM. THE FLOW VISUALIZATION ON THE ROTARY WING WITH LOW ASPECT RATIO

TADAHARU WATANUKI, MASAYOSHI MATSUZAKA, HIROTOSHI KUBOTA, KOJIRO SUZUKI, KOUICHI SAGAWA et al. Japan Society for Aeronautical and Space Sciences, Journal (ISSN 0021-4663), vol. 35, no. 402, 1987, p. 346-352. In Japanese, with abstract in English. refs

Flow patterns on a rotary wing with a low aspect ratio of 3.3 are experimentally investigated in the Goettingen type low speed wind tunnel. Single rotation propeller blade with a radius of 0.3 m is used as the model wing for the flow visualization. The flow phenomena on the blade are visualized by means of oil flow, tuft, mini-tuft, and china clay methods and recorded by simultaneous photography. The experimental results clearly show that the mini-tuft method is more suitable for visualizing the flow on the rotary wing. Author

SUPERSONIC FLOW AROUND A SPHERE IN A THERMAL INHOMOGENEITY [SVERKHZVUKOVOM OBTEKANIIE SFERY V TEPLOVOI NEODNORODNOSTI]

V. P. GOLOVIZNIN, G. I. MISHIN, I. U. L. SEROV, and I. P. IAVOR (AN SSSR, Fiziko-Tekhnicheskii Institut, Leningrad, USSR) Zhurnal Tekhnicheskoi Fiziki (ISSN 0044-4642), vol. 57, July 1987, p. 1433-1435. In Russian. refs

The dynamics of flow around spherical models in air in the presence of a temperature gradient was investigated experimentally at a ballistic testing facility using an instrument with a 15-ns laser source to photograph the flow patterns. Flow patterns are presented for a 20-mm-diameter polished duralumin ball moving at a speed of 1.98 km/s through heated air. It is found that the experimentally observed separation of the head shock wave from the model, $\Delta R/R$, differs substantially from the expected values, which is attributed to the nonsteady nature of the flow. NECESSARY OPTIMALITY CONDITIONS FOR THREE-DIMENSIONAL BODIES IN SUPERSONIC GAS FLOW [NEOBKHOODIMYE USLOVIA OPTIMAL'NOSTI PROSTRANSTVENNYKH TEL V SVERKHZVUKOVOM POTOKE GAZA]

I. E. MIKHAILOV Zhurnal Vychislitel'noi Matematiki i Matematicheskoi Fiziki (ISSN 0044-4669), vol. 27, July 1987, p. 1111-1114. In Russian.

The problem of determining the optimal shape of a three-dimensional body in supersonic stationary flow of a gas is analyzed under the assumption that all the flow parameters are continuous in the determinacy region of the body. The necessary extreme conditions are derived by using the method of Lagrangian multipliers. The solvability of the conjugate boundary value problem is demonstrated. V.L.

PRESSURE FIELD DUE TO DRAG REDUCING OUTER LAYER DEVICES IN TURBULENT BOUNDARY LAYERS
 P. R. BANDYOPADHYAY and R. D. WATSON (NASA, Langley Research Center, Hampton, VA) Experiments in Fluids (ISSN 0723-4864), vol. 5, no. 6, 1987, p. 393-400. refs
 (Contract NAS1-17296)

The wall static pressure in the vicinity of drag reducing outer layer devices in flat wall turbulent boundary layers has been measured and compared with an inviscid theory. Symmetric and cambered airfoil devices have been examined at small angles of attack and very low chord Reynolds numbers. Airfoil devices impose a sequence of strong favorable and adverse pressure gradients on the boundary layer whose drag is to be reduced. At very small angles of attack (+ or - 2 deg), this pressure field extends up to about three chord lengths downstream of the trailing edge of an airfoil device. Also examined are the pressures on the upper and lower surfaces of a symmetric airfoil device in the freestream and near the wall. The freestream pressure distribution around an airfoil section is altered by the wall proximity. The relevance of lift enhancement caused by wall proximity to drag reduction has been discussed. The pressure distributions on the flat wall beneath the symmetric airfoil devices are predicted well by the inviscid theory. However, the remaining pressure distributions are predicted only qualitatively, presumably because of strong viscous effects.

EXPERIMENTAL STUDY OF THREE-DIMENSIONAL SEPARATED FLOW SURROUNDING A HEMISPHERE-CYLINDER AT INCIDENCE
 ANDREW J. MEADE, JR. (California, University, Berkeley) and LEWIS B. SCHIFF (NASA, Ames Research Center, Moffett Field, CA) AIAA, Atmospheric Flight Mechanics Conference, Monterey, CA, Aug. 17-19, 1987. 14 p. refs
 (AIAA PAPER 87-2492)

Detailed experimental surface pressure coefficient measurements, obtained for a hemisphere-cylinder-flare model in a low supersonic flow (freestream $M = 1.2$) at various angles of attack (0 deg to 27.5 deg), have been analyzed. The pressure values for each angle of attack were smoothed and checked against their respective oil-flow photographs. The smoothed results were then used to validate a theory which relates the number and type of singular points observed in the oil-flow patterns with local surface-pressure extrema.

MULTIGRID LOCALIZATION AND MULTIGRID GRID GENERATION FOR THE COMPUTATION OF VORTEX STRUCTURES AND DYNAMICS OF FLOWS IN CAVITIES AND ABOUT AIRFOILS

KARL GUSTAFSON and ROBERT LEBEN (Colorado, University, Boulder) University of Colorado and USAF, Copper Mountain Conference on Multigrid Methods, 3rd, Copper Mountain, CO, Apr. 6-10, 1987, Paper. 15 p. refs

A robust multigrid nested subdomain scheme is applied to a Stokes flow in a unit cavity, and the resolution of 25 corner subvortices is reported. The algorithm is shown to be competitive with a near optimum ADI technique, and it is applied to the infinite airfoil domain problem. Results are then presented for full unsteady Navier-Stokes flow about an NACA 0015 airfoil. The solution procedure consists of using the multigrid solver for the stream function computations, using an ADI scheme to advance the vorticity values in time, and using the multigrid grid generation technique to provide the boundary-fitted coordinates. Good resolution of fine vortical detail and temporal correlation between the experimental and numerical studies are noted.

ARBITRARY WINGS OF LOW ASPECT RATIO IN SUBSONIC FLOW

LAZAR DRAGOS (Bucuresti, Universitatea, Bucharest, Rumania) Zeitschrift fuer angewandte Mathematik und Physik (ISSN 0044-2275), vol. 38, July 1987, p. 648-652. refs

The study of the theory of wings of low aspect ratio in incompressible fluids, or compressible subsonic flow, is expanded to include the case of wings of arbitrary planform. Explicit formulas for the calculation of the lift and moment coefficients are derived for wings of arbitrary planform. The fundamental formulas for the lift and moment coefficients are obtained using Green's formula.

NUMERICAL SOLUTION OF STREAM FUNCTION EQUATIONS IN TRANSONIC FLOWS

J. Z. XU, W. Y. NI, and J. Y. DU (Chinese Academy of Sciences, Institute of Engineering Thermophysics, Beijing, People's Republic of China) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 5 p. refs
 (ASME PAPER 87-GT-18)

In order to develop the transonic stream function approach, one of the momentum equations is employed to form the principal equation of the stream function which does not contain the terms of the vorticity and the entropy, and the other one is used to calculate the density directly. Since the density is uniquely determined, the problem that the density is a double-valued function of mass flux in the stream function formulation disappears and the entropy increase across the shock is naturally included. The numerical results for the transonic cascade flow show that the shock obtained from the present method is slightly weaker. It is placed further downstream compared to the irrotational stream function calculation, and is closer to the experimental data.

A SIMPLIFIED METHOD FOR 3-D POTENTIAL FLOW IN TURBOMACHINERY USING VORTEX SHEET BOUNDARY CONDITIONS

H. JIANG, R. CAI, and Y. ZHU (Chinese Academy of Sciences, Institute of Engineering Thermophysics, Beijing, People's Republic of China) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 7 p. Research supported by the Chinese Academy of Sciences. refs
 (ASME PAPER 87-GT-28)

Within the framework of inviscid flow theory, the character of three-dimensional flow in turbomachinery blade row is discussed. One of the important differences between three-dimensional and two-dimensional flow in turbomachinery is the discontinuity of velocity at the two sides of the trailing edge and across the downstream boundary. The inconsistency of the traditional periodicity conditions for the downstream boundary and of the axisymmetric assumption for the outlet flow with the three-dimensionality of turbomachinery flow is discussed also. For three-dimensional potential flow, the vortex sheet boundary conditions (VSBC) for the downstream boundary and a fully three-dimensional condition for outlet flow are presented. A simplified method is developed by implementation of VSBC on a fixed vortex boundary in order to predict the fully three-dimensional flow in blade passage as well as downstream of blade row. In the present investigation two calculations are carried out. In one calculation the traditional boundary conditions are imposed while in another one, the VSBC are used to demonstrate the capability of the newly developed boundary conditions. The agreement between some calculated results and the theoretical analysis is very good.

A NEW METHOD OF CALCULATING OPTIMUM VELOCITY DISTRIBUTION ALONG THE BLADE SURFACE ON ARBITRARY STREAM SURFACE OF REVOLUTION IN TURBOMACHINES

ZIXIANG ZOU and DING YUAN (Chinese Academy of Sciences, Institute of Engineering Thermophysics, Beijing, People's Republic of China) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 5 p. refs

(ASME PAPER 87-GT-30)

A method for calculating the optimum velocity distribution along the blade surface in a two-dimensional incompressible flow is described. This method is based on the theory of boundary layer and the calculation of cascade loss, and it employs the Pontijagin maximum principle and new optimum techniques. The physical model and equations used in the calculation are presented. The procedure involves initially calculating the incompressible steady flow and then extending it to that of the incompressible flow on an arbitrary surface of revolution. This method is also applicable to the optimum design of two-dimensional compressor blades and long thin revolutionary bodies of axial symmetry. I.F.

THROUGH-FLOW ANALYSIS OF A MULTI-STAGE COMPRESSOR OPERATING AT NEAR-STALL CONDITIONS

ROBERT P. DRING and DAVID H. JOSLYN (United Technologies Research Center, East Hartford, CT) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 10 p. Research supported by United Technologies Corp. refs

(Contract N00014-85-C-0657)

(ASME PAPER 87-GT-51)

An assessment of through-flow theory was undertaken based on detailed measurements obtained in a large-scale rotating compressor rig. This assessment is focused specifically on the compressor aerodynamics at near-stall conditions since the three-dimensionality of the flow is at its worst under these circumstances, and the assumptions of axisymmetry in the theory are tested far more severely than at design conditions. This assessment demonstrates that a reasonably accurate prediction can be achieved but that major discrepancies can occur near the endwalls where blockage is high. It is also demonstrated that large errors can be incurred when the spanwise description of blockage is inaccurate in its detailed distribution or in its level. Author

THE DESIGN OF SHOCK-FREE COMPRESSOR CASCADES INCLUDING VISCOUS BOUNDARY LAYER EFFECTS

AHMED A. HASSAN (Arizona State University, Tempe) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 10 p. refs

(ASME PAPER 87-GT-71)

A numerical procedure for the design of shock-free transonic compressor cascades is proposed, taking viscous effects into account and assuming that the boundary layer is fully attached over the blade. A modified inviscid hodograph-based inverse-design algorithm and an inverse boundary layer algorithm (Miner et al., 1971) are iteratively combined. The present method decouples the inviscid subsonic and supersonic regions of the flow, allowing the solution of either an elliptic or hyperbolic-type partial differential equation for the full stream function. The procedure is demonstrated with two examples of shock-free compressor blades. R.R.

THREE-DIMENSIONAL CALCULATION OF WALL BOUNDARY LAYER FLOWS IN TURBOMACHINES

W. L. LINDSAY (Pratt and Whitney, Quebec, Canada), H. B. CARRICK (Imperial Chemical Industries, PLC, Middlesbrough, England), and J. H. HORLOCK (Open University, Milton Keynes, England) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 10 p. refs

(ASME PAPER 87-GT-82)

An integral method is used to calculate the three-dimensional turbulent boundary layer development through the blade rows of turbomachines. Simultaneous equations are solved for the growth of streamwise and cross-flow momentum thicknesses, entrainment, the wall shear stress, and the position of maximum cross-flow. The method is shown to predict flows very successfully for lightly loaded compressor blading (the experiments of Horlock, 1963), but less successfully for a highly loaded compressor cascade (the experiments of Lindsay, 1974). In general, the method was found to overestimate the secondary or cross-flow observed in the highly loaded turbine blades of the Carrick (1975) experiments. R.R.

NUMERICAL SOLUTION OF THREE-DIMENSIONAL TURBULENT FLOWS FOR MODERN GAS TURBINE COMPONENTS

C. HAH (General Electric Co., Schenectady, NY) and J. H. LEYLEK (General Electric Co., Aircraft Engine Business Group, Cincinnati, OH) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 8 p. refs

(ASME PAPER 87-GT-84)

This paper describes the development and assessment of a computer code for three-dimensional compressible turbulent flows in modern gas turbine components. The code is based on a high-order upwinding relaxation scheme with fully conservative control volume. A three-dimensional Reynolds-averaged Navier-Stokes equation is solved with a two-equation turbulence model that has a low Reynolds number modification near the solid wall. The code is applied to the study of compressible flow inside turbine blade rows of modern gas turbines. Measured data and calculations are carefully compared for the production and convection of aerodynamic loss to evaluate the code as an advanced design technique. The predicted aerodynamic performance is further compared with predictions based on current design techniques. Author

EXPERIMENTAL INVESTIGATIONS OF FLOWS THROUGH A PLANE CASCADE AT LARGE ANGLES OF ATTACK WITH SEPARATIONS

CHUAN-GANG GU, LAI-QIN LUO, and YONG-MIAO MIAO (Xian Jiaotong University, People's Republic of China) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 7 p. refs (ASME PAPER 87-GT-96)

Measurements of various parameters in the flows through a cascade at different angles of attack have been performed. The parameters, such as Reynolds stresses, pressure distribution on the blade surface, velocity distribution in the blade passage, and the position of the separation point are measured at a large angle of attack with separations. In addition, the development of the wake is also investigated. A new formula with a second order of accuracy has been developed to analyze the signals of hot wire in flows with high turbulence intensity. The data by a hot wire are compared with those by conventional measurement techniques and by flow visualizations. The results are satisfactory. Author

SHOCK EMBEDDING DISCONTINUOUS SOLUTION OF ELLIPTIC EQUATION FOR INVERSE PROBLEM OF TRANSONIC S2 FLOW

HONGJI CHEN and CHUNG-HUA WU (Chinese Academy of Sciences, Institute of Engineering Thermophysics, Beijing, People's Republic of China) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 8 p. refs (ASME PAPER 87-GT-115)

A simple, accurate and reliable computer code, using a conservative form of the stream-function principal equation and embedding the shock relations into the principal equation, has been programmed in order to calculate the transonic flow over the whole S2 surface containing the discontinuity of a passage shock. The program has application to the solution of the three-dimensional transonic flow in a fan or compressor through iterative computation of transonic S1 and S2 flows. The method is used to calculate the S2 flow in a typical transonic rotor. R.R.

OFF-DESIGN PERFORMANCE OF SUPERSONIC COMPRESSORS WITH FIXED AND VARIABLE GEOMETRY

K.-D. BROICHHAUSEN (MTU Motoren- und Turbinen-Union Muenchen GmbH, Munich, Federal Republic of Germany), H. E. GALLUS, and R. MOENIG (Aachen, Rheinisch-Westfaelische Technische Hochschule, Federal Republic of Germany) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 14 p. DFG-supported research. refs (ASME PAPER 87-GT-116)

The blading and flow path geometry of supersonic axial flow compressors employing combinations of characteristic rotors and stators with fixed and variable geometry is investigated. For the supersonic compressor stages presently investigated, it is shown that the three-dimensional passage geometry has an important influence on the off-design performance. Semiempirical models are obtained that numerically describe flow phenomena including the shock-wall, profile-wall, and end-wall boundary layer losses. These models are incorporated into a streamline curvature calculation method in order to provide information regarding the off-design performance. R.R.

A TRACE GAS TECHNIQUE TO STUDY MIXING IN A TURBINE STAGE

H. D. JOSLYN and R. P. DRING (United Technologies Research Center, East Hartford, CT) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 8 p. refs (ASME PAPER 87-GT-118)

An experimental technique to study mixing in a turbine stage is demonstrated. An axisymmetric, radial temperature profile at the inlet to the first stator of a large-scale, low-speed, single-stage, axial flow turbine model is simulated with a radial trace gas concentration distribution. Mixing or redistribution of the inlet profile by three-dimensional aerodynamic mechanisms is determined from trace gas concentration measurements made in both the stationary and rotating frames of reference at various locations through the turbine. The trace gas concentration contours generated are consistent with flow pitch angle measurements made downstream of the first stator and with surface flow visualization on the rotor airfoil and the hub endwall. It is demonstrated that this trace gas technique is well suited to quantify many aspects of the redistribution and diffusion of an inlet temperature profile as it is convected through a turbine stage. A DISCUSSION OF THE MEAN S2 STREAM SURFACES APPLIED TO QUASI-THREE-DIMENSIONAL CALCULATION PROGRAMS FOR TURBOMACHINERY DESIGN

XUJIN ZHU and ZHONGQI WANG (Harbin Institute of Technology, People's Republic of China) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 11 p. refs (ASME PAPER 87-GT-150)

Various definitions of the S2m surfaces applied to quasi-three-dimensional flow calculations in turbomachinery design are clarified, and an extended version of the true S2 stream surface, the pitch-averaged generalized S2 (PAG S2) stream surface, is considered. The governing equations for PAG S2 are derived through introducing nonorthogonal curvilinear coordinates and nonorthogonal velocity components into the pitch-averaged equations. It is demonstrated that PAG S2 is a more universally applicable model for solving the pitch-averaged flow properties of turbine blade passage flow. Neither S2m nor quasi-S2m (an imperfect version of PAG S2) are predicted to give correct mean solutions of the flow-through. R.R.

NUMERICAL COMPUTATION OF NON-ISENTROPIC POTENTIAL EQUATIONS FOR TRANSONIC CASCADE FLOWS

J. Z. XU, J. Y. DU, and W. Y. NI (Chinese Academy of Sciences, Institute of Engineering Thermophysics, Beijing, People's Republic of China) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 6 p. Research supported by the Chinese Academy of Sciences and Gas Turbine Establishment of China. refs (ASME PAPER 87-GT-159)

Based on the analysis of the momentum equations and the nonisentropic flow, an 'isentropic density', which is computed according to the isentropic relation and is dependent on the temperature only, is separated from the density. The entropy increase across the shock may be directly calculated from the momentum equations in the divergence form. Iterating it with the classical potential equation may solve the nonisentropic transonic flowfield conveniently. It is seen from the calculations of transonic cascade flow on the surface of revolution that the shock in the nonisentropic calculation is weaker and is located further upstream compared to the classical potential solution, and is in agreement with the experimental results. APPLICATION OF ADVANCED COMPUTATIONAL CODES IN THE DESIGN OF AN EXPERIMENT FOR A SUPERSONIC THROUGHFLOW FAN ROTOR

JERRY R. WOOD, JAMES F. SCHMIDT, RONALD J. STEINKE, RODRICK V. CHIMA, and WILLIAM G. KUNIK (NASA, Lewis Research Center, Cleveland, OH) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 15 p. Previously announced in STAR as N87-22630. refs

(ASME PAPER 87-GT-160)

Increased emphasis on sustained supersonic or hypersonic cruise has revived interest in the supersonic throughflow fan as a possible component in advanced propulsion systems. Use of a fan that can operate with a supersonic inlet axial Mach number is attractive from the standpoint of reducing the inlet losses incurred in diffusing the flow from a supersonic flight Mach number to a subsonic one at the fan face. The design of the experiment using advanced computational codes to calculate the components required is described. The rotor was designed using existing turbomachinery design and analysis codes modified to handle fully supersonic axial flow through the rotor. A two-dimensional axisymmetric throughflow design code plus a blade element code were used to generate fan rotor velocity diagrams and blade shapes. A quasi-three-dimensional, thin shear layer Navier-Stokes code was used to assess the performance of the fan rotor blade shapes. The final design was stacked and checked for three-dimensional effects using a three-dimensional Euler code interactively coupled with a two-dimensional boundary layer code. The nozzle design in the expansion region was analyzed with a three-dimensional parabolized viscous code which corroborated the results from the Euler code. A translating supersonic diffuser was designed using these same codes. Author

CHARACTERIZATION OF SHOCK WAVE END WALL BOUNDARY LAYER INTERACTIONS IN A TRANSONIC COMPRESSOR ROTOR

D. C. RABE, A. J. WENNERSTROM (USAF, Aero Propulsion Laboratory, Wright-Patterson AFB, OH), and W. F. O'BRIEN, JR. (Virginia Polytechnic Institute and State University, Blacksburg) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 8 p. refs

(ASME PAPER 87-GT-166)

The passage shock wave end wall boundary layer interaction in a transonic compressor was investigated with a laser transit anemometer. The transonic compressor used in this investigation was developed by the General Electric Company under contract to the Air Force. The compressor testing was conducted in the Compressor Research Facility at Wright-Patterson Air Force Base, Ohio. Laser measurements were made in two blade passages at seven axial locations from 10 percent of the axial blade chord in front of the leading edge to 30 percent of the axial blade chord into the blade passage. At three of these axial locations, laser traverses were taken at different radial immersions. A total of twenty-seven different locations were traversed circumferentially. The measurements reveal that the end wall boundary layer in this region is separated from the core flow by what appears to be a shear layer where the passage shock wave and all ordered flow seem to end abruptly. UNIFIED EQUATION OF MOTION (UEM) APPROACH AS APPLIED TO S1 TURBOMACHINERY PROBLEMS

S. ABDALLAH, C. F. SMITH, and M. W. MCBRIDE (Pennsylvania State University, State College) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 7 p. refs

(Contract N00024-79-C-6043; N00024-85-C-6041)

(ASME PAPER 87-GT-179)

A simple approach is developed for the solution of inviscid blade-to-blade flow in turbomachines. In this approach the

equations of motion are combined into a single elliptic second-order partial differential equation of the streamline field; this equation is referred to as the unified equation of motion (UEM). The UEM is used to trace streamline positions. Then, the velocity field is determined by differentiating the stream function field and the use of the computed streamlines. The method was applied to obtain incompressible blade-to-blade flow solutions for S1 turbomachinery, and the results are compared with experimental data and with results of other numerical methods. STABILITY OF CONICAL AND CURVED ANNULAR DIFFUSERS FOR MIXED-FLOW COMPRESSORS

A. ABIR (Research Products, Rehovot, Israel) and A. WHITFIELD (Bath, University, England) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 7 p. refs

(ASME PAPER 87-GT-191)

The internal flow structures for two curved diffusers, a straight conical diffuser, and a straight radial annular diffuser were measured using a two channel hot wire anemometry system and a five hole pitot static tube. The experimental test facility was composed of two axial flow fans that supplied air to the diffusers via a rotating screen arrangement. All the diffusers tested had an inlet width of 56 mm and inlet and discharge radii of 300 mm and 508 mm, respectively. Profiles of the flow throughout the diffusers are analyzed. It is observed that the straight annular diffuser is the least stable and the radial annular diffuser exhibits the best suitability characteristics. It is detected that the flow stability of the two curved diffusers can be improved by reducing the passage width. I.F.

MODELLING THE UNSTEADY FLOW IN A TURBINE ROTOR PASSAGE

D. J. DOORLY (University College, London, England) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 12 p. Research supported by Rolls-Royce, PLC and SERC. refs
(ASME PAPER 87-GT-197)

The effects of the wakes shed by an upstream blade row in forcing the transition of an otherwise laminar rotor blade boundary layer are well recognized. Previous experiments have demonstrated that the forced transition of the laminar boundary layer may greatly influence the surface heat flux. The effect of the wakes on the surface heat flux when the undisturbed boundary layer is already turbulent have been studied using an experimental simulation technique. The results have been analyzed with a view to establishing how well the effects of the wakes can be described by a model which treats only their turbulence content. The effects of wake-passing at a reduced Reynolds number are also reported. Author

THE BASE PRESSURE AND LOSS OF A FAMILY OF FOUR TURBINE BLADES

L. XU and J. D. DENTON (Cambridge University, England) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 11 p. Research supported by the Royal Aircraft Establishment. refs
(ASME PAPER 87-GT-202)

Measurements of the effect of trailing edge geometry on the base pressure and loss of a family of four turbine cascades are presented. The measurements were made in the transonic range of Mach number from 0.8 to 1.2. It is found that, for blades with typical trailing edge thickness, the trailing edge loss is the major source of profile loss at these speeds and that the base pressure plays a dominant role in determining the loss. For blades with thick trailing edges an accurate prediction of base pressure is crucial to loss prediction. However, it is found that current methods of base pressure prediction are unable to give reliable prediction. Author

UNSTEADY AERODYNAMIC MEASUREMENTS ON A ROTATING COMPRESSOR BLADE ROW AT LOW MACH NUMBER

L. W. HARDIN, R. O. CARTA, and J. M. VERDON (United Technologies Research Center, East Hartford, CT) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 12 p. refs
(Contract F49620-81-C-0088)
(ASME PAPER 87-GT-221)

A heavily instrumented blade row rotating in a realistic compressor model is experimentally investigated to study the unsteady response of a blade row to a prescribed oscillation. Data obtained for steady state conditions agreed with previous pneumatic data at all flow conditions, and agreement was also

found with a steady potential flow solution. The quasi-steady response was found to be in fair agreement with the in-phase part of the measured unsteady response for the lowest oscillation frequency, with progressively worse agreement of the in-phase part for higher frequencies. Data acquired under oscillatory conditions agreed with linearized unsteady potential flow predictions over most of the entire chord for low to moderate incidence, and agreement between theory and experiment was better at higher frequencies. A METHOD FOR CALCULATING TURBULENT BOUNDARY LAYERS AND LOSSES IN THE FLOW CHANNELS OF TURBOMACHINES

LAWRENCE F. SCHUMANN (NASA, Lewis Research Center; U.S. Army, Propulsion Directorate, Cleveland, OH) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 10 p. Previously announced in STAR as N87-15944. refs
(ASME PAPER 87-GT-225)

An interactive inviscid core flow-boundary layer method is presented for the calculation of turbomachine channel flows. For this method, a one-dimensional inviscid core flow is assumed. The end-wall and blade surface boundary layers are calculated using an integral entrainment method. The boundary layers are assumed to be collateral and thus are two-dimensional. The boundary layer equations are written in a streamline coordinate system. The streamwise velocity profiles are approximated by power law profiles. Compressibility is accounted for in the streamwise direction but not in the normal direction. Equations are derived for the special cases of conical and two-dimensional rectangular diffusers. For these cases, the assumptions of a one-dimensional core flow and collateral boundary layers are valid. Results using the method are compared with experiment and good quantitative agreement is obtained. Author

A88-11125#

CALCULATION OF A THREE-DIMENSIONAL TURBOMACHINERY ROTOR FLOW WITH A NAVIER-STOKES CODE

MATTHEW J. WARFIELD and B. LAKSHMINARAYANA (Pennsylvania State University, University Park) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 10 p. Navy-supported research. refs
(ASME PAPER 87-GT-232)

The paper deals with a numerical solution of the full Navier-Stokes equations governing the flowfield in a turbomachinery rotor. A two-equation turbulence model (k-epsilon) coupled with a vectorial eddy viscosity model based on an algebraic Reynolds stress model is used to account for the anisotropic effects of rotation and three dimensionality. The predicted blade to blade profiles of velocity at various radial locations as well as the streamwise velocity profiles in the blade boundary layer show good agreement with experimental data. Author

THEORETICAL AND EXPERIMENTAL ANALYSIS OF A COMPRESSOR CASCADE AT SUPERCRITICAL FLOW CONDITIONS

A. WEBER, M. FADEN, H. STARKEN, and V. JAWTUSCH (DFVLR, Institut fuer Antriebstechnik, Cologne, Federal Republic of Germany) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 11 p. Research sponsored by the Arbeitsgemeinschaft Industrieller Forschungsvereinigungen. refs (ASME PAPER 87-GT-256)

Theoretical and experimental results for profile Mach number distribution, loss behavior, and exit flow angle have been compared for a compressed rotor cascade at $M_1 = 0.85$. A two-dimensional finite element method and McNally's (1970) integral boundary layer method are coupled iteratively by adding the displacement thickness to the metal blade contour. The averaged exit flow properties and the total pressure loss coefficient are determined by using the conservation laws. Good agreement is found between experimental and theoretical results regarding profile Mach number distribution over the whole incidence range. It is suggested that discrepancies for losses at negative incidences can be reduced by more accurately accounting for the shock boundary layer interaction, the shock induced separation, and the strength of the shock wave. AERODYNAMICS AT LOW REYNOLDS NUMBERS - A REVIEW OF THEORETICAL AND EXPERIMENTAL RESEARCH AT DELFT UNIVERSITY OF TECHNOLOGY

J. L. VAN INGEN and L. M. M. BOERMANS (Delft, Technische Hogeschool, Netherlands) IN: Aerodynamics at low Reynolds numbers Re greater than 10 to the 4th and less than 10 to the 6th; Proceedings of the International Conference, London, England, Oct. 15-18, 1986. Volume 1. London, Royal Aeronautical Society, 1986, p. 1.1-1.41. DFVLR-supported research. refs

This paper gives a review of research on low Reynolds number aerodynamics. Typical for this Reynolds number range is the occurrence of significant effects of laminar separation bubbles. Results of flow visualization studies are used to define an empirical relation for the angle γ at which the separation streamline

leaves the wall. The e_{exp} transition prediction method is extended to separated flows. It is shown that a simple bursting criterion is provided by Stratfords limiting pressure distribution for a zero skin friction turbulent boundary layer. A universal description of the laminar part of the bubble is proposed, resulting in a simple bubble prediction method. The effect of tripping devices to decrease the adverse effect of the bubble on drag is discussed. The final chapter presents some results of low Reynolds number airfoil designs and tests. Author

ON MASSIVE LAMINAR SEPARATION AND LIFT ANOMALIES IN SUBCRITICAL RE-RANGE

H. K. CHENG, ED. (Southern California, University, Los Angeles, CA) IN: Aerodynamics at low Reynolds numbers Re greater than 10 to the 4th and less than 10 to the 6th; Proceedings of the International Conference, London, England, Oct. 15-18, 1986. Volume 1. London, Royal Aeronautical Society, 1986, p. 2.1-2.41. Navy-supported research. refs

Lift anomalies arising from massive laminar separation are studied in the framework of steady-state solutions to the problem of a body-scale flow, with the 'triple-deck' as a key element. Existing studies by this approach are summarized; more complete results, representing multiple steady states of the open- and closed-wake models, provide an analytical basis for explaining lift hysteresis, symmetry breaking, and other forms of lift anomalies in a subcritical flow. The importance of time-accurate analyses in providing the data base for the assessment of these bifurcating steady states is discussed. Also noted is the relevance of the development from the triple-deck theory of the marginal stall to an explanation of the anomalous L/D increase of certain airfoils just before stall at a high subcritical Re. Author

A SMOKE-WIRE STUDY OF LOW REYNOLDS NUMBER FLOW OVER A NASA LRN(1) - 1007 AIRFOIL SECTION

S. S. FISHER (Virginia, University, Charlottesville) and J. D. ABBITT IN: Aerodynamics at low Reynolds numbers Re greater than 10 to the 4th and less than 10 to the 6th; Proceedings of the International Conference, London, England, Oct. 15-18, 1986. Volume 1. London, Royal Aeronautical Society, 1986, p. 5.1-5.28. refs

Smoke-filament visualization photographs are presented for two-dimensional flow over a NASA LRN(1) - 1007 airfoil section designed specifically for high-efficiency operation at low chord Reynolds numbers. Results are included for chord Reynolds numbers of 60,000, 100,000, and 220,000 and for angles of attack ranging from 0 to 16 degrees. Two kinds of laminar separation bubble are found to develop in the flow over the airfoil. The sites and characteristics of formation of these bubbles are described, and their dimensional properties are estimated. The transition-to-turbulence Reynolds numbers, surface pressure coefficient distributions, and lift coefficients deduced from the measured coefficients are compared with those obtained by other authors. LOW REYNOLDS NUMBER AIRFOIL DESIGN AT THE DOUGLAS AIRCRAFT COMPANY

R. H. LIEBECK (Douglas Aircraft Co., Long Beach, CA) IN: Aerodynamics at low Reynolds numbers Re greater than 10 to the 4th and less than 10 to the 6th; Proceedings of the International Conference, London, England, Oct. 15-18, 1986. Volume 1. London, Royal Aeronautical Society, 1986, p. 7.1-7.24. refs

Development of low Reynolds number airfoil technology at the Douglas Aircraft Company over the past 15 years is described. This includes an explanation of some fluid mechanical problems, such as control of the omnipresent laminar separation bubble, which are unique to the low Reynolds number flight regime. Performance trades between design $C(l)$, $C(m)$, $C(l)_{max}$, and t/c are discussed and illustrated with wind tunnel results from several example airfoils. Recommendations for future airfoil design and testing are offered. Author

BOUNDARY LAYER AND PERFORMANCE CHARACTERISTICS FROM WIND TUNNEL TESTS OF A LOW REYNOLDS NUMBER LIEBECK AIRFOIL

P. LEBLANCK, R. H. LIEBECK, and R. BLACKWELDER (Southern California, University, Los Angeles, CA) IN: Aerodynamics at low Reynolds numbers Re greater than 10 to the 4th and less than 10 to the 6th; Proceedings of the International Conference, London, England, Oct. 15-18, 1986. Volume 1. London, Royal Aeronautical Society, 1986, p. 8.1-8.19. refs
(Contract N00014-84-K-0500)

Experimental data is presented for an investigation of both global performance parameters and more detailed boundary layer flowfield characteristics of a Liebeck LA2573A airfoil designed for use at low Reynolds numbers. Hot-wire mean velocity and turbulent intensity profiles illustrate the development of a laminar separation bubble through transition and reattachment, while boundary layer spectra highlight the progression of instabilities toward transition. Increases in the free stream turbulence level promote earlier transition and a smaller separation bubble. Author

ATMOSPHERIC TURBULENCE AND GUST ON THE PERFORMANCE OF A WORTMANN FX 63-137 WING

H.-T. LIU (Flow Research Co., Kent, WA) IN: Aerodynamics at low Reynolds numbers Re greater than 10 to the 4th and less than 10 to the 6th; Proceedings of the International Conference, London, England, Oct. 15-18, 1986. Volume 1. London, Royal Aeronautical Society, 1986, p. 9.1-9.25. refs
(Contract N00014-85-C-0214)

The unsteady effects of turbulence and gust on the performance of a full-scale Wortmann FX 63-137 wing with a 3.66 m span and 0.61 m chord are experimentally studied. The chord Reynolds number ranges from 80,000 to 450,000 and the turbulence intensity from 8 to over 40 percent. The spectra of the wind components show that the reduced frequencies experienced by the wing may be up to 0.1 or higher, indicating that unsteady effects are important. The instantaneous angle of attack of the wing is mainly governed by variations in the vertical wind component. Thus, the wing experiences mainly a plunging rather than a pitching motion, together with sweeping and longitudinal oscillations due to the unsteady, three-dimensional wind field. Significant lift overshoot is observed in the full-scale data, resulting in a significant increase in the $C(l)_{max}$ and in the stall angle. A twofold reduction in $C(D)_{min}$ is also observed. C.D.

TRANSITION AND SEPARATION CONTROL ON A LOW-REYNOLDS NUMBER AIRFOIL

S. M. MANGALAM, A. BAR-SEVER (AS&M, Inc., Hampton, VA), K. B. M. Q. ZAMAN (NASA, Lewis Research Center, Cleveland, OH), and W. D. HARVEY (NASA, Langley Research Center, Hampton, VA) IN: Aerodynamics at low Reynolds numbers Re greater than 10 to the 4th and less than 10 to the 6th; Proceedings of the International Conference, London, England, Oct. 15-18, 1986. Volume 1. London, Royal Aeronautical Society, 1986, p. 10.1-10.19. refs
(Contract NAS1-17670; NAS1-17683; NAS1-18235)

The major problem associated with the aerodynamic performance of airfoils at low Reynolds numbers is the presence of extensive laminar boundary-layer separation resulting in a large increase in pressure drag and a decrease in lift. The rapid deterioration in airfoil characteristics can be largely eliminated by artificially controlling the flow through the introduction of suitable disturbances in the boundary layer such that transition occurs ahead of the anticipated laminar separation. This paper presents the results of wind-tunnel tests conducted on a 10-cm model of LRN (1)-1007 airfoil with passive (roughness trips) and active (acoustic excitation) controls to trigger transition and suppress separation. Significant improvements in the aerodynamic characteristics of the airfoil were observed. Results of this study for a chord Reynolds

02 AERODYNAMICS

number range of 40,000 to 250,000 are presented in this paper.

CONTROL SURFACE EFFECTS ON THE LOW REYNOLDS NUMBER BEHAVIOR OF THE WORTMANN FX 63-137

J. F. MARCHMAN, III and V. SUMANTRAN (Virginia Polytechnic Institute and State University, Blacksburg) IN: Aerodynamics at low Reynolds numbers Re greater than 10 to the 4th and less than 10 to the 6th; Proceedings of the International Conference, London, England, Oct. 15-18, 1986. Volume 1. London, Royal Aeronautical Society, 1986, p. 11.1-11.14. refs (Contract N00014-84-K-0093)

The effects of control-surface deflections on the flow around and on the aerodynamic performance of two Wortmann FX 63-137 wings were studied experimentally in the Virginia Tech Stability Wind Tunnel. Tests were conducted at Reynolds numbers from 70,000 to 300,000 on wings of aspect ratio four and nine with various arrangements of 30 percent chord trailing edge control surfaces deflected between angles of \pm or $-$ 40 degrees and used as both plain flaps and ailerons. Positive flap deflection yielded fairly conventional flap behavior and caused no noticeable changes in basic low Reynolds number flow patterns. Negative deflections cause large changes in the flow and marked deterioration of lift and drag. Negative deflections may alter the basic nature of stall at a given Reynolds number. Aileron behavior was predictable and resembles that expected at higher Reynolds numbers. The results include force, moment, and pressure distribution data.

RECENT DEVELOPMENTS IN BOUNDARY LAYER COMPUTATION

R. EPPLER (Stuttgart, Universitaet, Federal Republic of Germany) IN: Aerodynamics at low Reynolds numbers Re greater than 10 to the 4th and less than 10 to the 6th; Proceedings of the International Conference, London, England, Oct. 15-18, 1986. Volume 2. London, Royal Aeronautical Society, 1986, p. 12.1-12.18.

The most important and difficult part of the boundary layer computation for low Reynolds numbers is to simulate the laminar separation bubble. A very simple and successfully applied model is a bubble analogue which can be evaluated from a conventional computational method based upon the integral momentum and energy equation. Recently, it turned out that this model was not sharp enough and yielded a too short analogy of the bubble. Modifications are discussed which improve the model. Comparisons with experiments are presented.

LOW REYNOLDS NUMBER WIND TUNNEL MEASUREMENTS - THE IMPORTANCE OF BEING EARNEST

THOMAS J. MUELLER, STEPHEN M. BATILL, MICHAEL BRENDEN, MARK L. PERRY, DIANE R. BLOCH (Notre Dame, University, IN) et al. IN: Aerodynamics at low Reynolds numbers Re greater than 10 to the 4th and less than 10 to the 6th; Proceedings of the International Conference, London, England, Oct. 15-18, 1986. Volume 2. London, Royal Aeronautical Society, 1986, p. 14.1-14.18. Research supported by the University of Notre Dame. refs

(Contract NSG-1419; N00014-83-K-0239)

A method for obtaining two-dimensional aerodynamic force coefficients at low Reynolds numbers using a three-component external platform balance is presented. Regardless of method, however, the importance of understanding the possible influence of the test facility and instrumentation on the final results cannot be overstated. There is an uncertainty in the ability of the facility to simulate a two-dimensional flow environment due to the confinement effect of the wind tunnel and the method used to mount the airfoil. Additionally, the ability of the instrumentation to accurately measure forces and pressures has an associated uncertainty. This paper focuses on efforts taken to understand the errors introduced by the techniques and apparatus used at the University of Notre Dame, and, the importance of making an earnest estimate of the uncertainty. Although quantitative estimates of facility induced errors are difficult to obtain, the uncertainty in measured results can be handled in a straightforward manner and provide the experimentalist, and others, with a basis to evaluate experimental results.

RECENT DEVELOPMENTS IN THE CALCULATION OF FLOW OVER LOW REYNOLDS-NUMBER AIRFOILS

TUNCER CEBECI, G. S. WANG, K. C. CHANG, and J. CHOI (California State University, Long Beach) IN: Aerodynamics at low Reynolds numbers Re greater than 10 to the 4th and less than 10 to the 6th; Proceedings of the International Conference, London, England, Oct. 15-18, 1986. Volume 2. London, Royal Aeronautical Society, 1986, p. 15.1-15.13. refs (Contract N00014-85-K-0346)

A method developed previously for high Reynolds number flows is extended and used to calculate the flow over low Reynolds-number airfoils and to obtain results which can be compared with measurements. It is based on the interaction of solutions of inviscid and boundary-layer equations and involves the flow around the airfoil and its wake. The inviscid equations are solved by a conformal-mapping procedure and the boundary-layer equations by an inverse finite-difference procedure with an interaction formula. The emphasis of the paper is on transition in low Reynolds number flows with separation and on the influence of the wake which is known to be important with high angles of attack and high Reynolds numbers. A correlation formula based on linear stability theory is developed and used to calculate transition. The results show that the accurate prediction of transition is important and is satisfied by the present formula. They also demonstrate the need to include the wake in low Reynolds-number flow calculations for all angles of attack.

ON THE DETERMINATION OF THE 2-D CHARACTERISTICS OF AEROFOILS AT LOW REYNOLDS NUMBERS

D. I. A. POLL and A. MANSOOR (Cranfield Institute of Technology, England) IN: Aerodynamics at low Reynolds numbers Re greater than 10 to the 4th and less than 10 to the 6th; Proceedings of the International Conference, London, England, Oct. 15-18, 1986. Volume 2. London, Royal Aeronautical Society, 1986, p. 16.1-16.16. refs

This paper describes an experimental investigation of the aerodynamic characteristics of the NACA 23012 aerofoil in the Reynolds number range 200,000 to 400,000. Tests were conducted using a variable aspect ratio rig in an open-jet wind tunnel. Lift

forces and pitching moments were deduced by integrating surface pressures, and the drag force was obtained by the wake traverse technique. Special attention was paid to the attainment of infinite aspect ratio - or two-dimensional - flow conditions. Preliminary data are compared with existing information covering the Reynolds number range 700,000 to 9 million. Guidelines for the investigation of two-dimensional aerofoil characteristics in open-jet wind tunnels are proposed. Author

RECENT WIND TUNNEL EXPERIMENTS AT LOW REYNOLDS NUMBERS

DIETER ALTHAUS (Stuttgart, Universitaet, Federal Republic of Germany) IN: Aerodynamics at low Reynolds numbers Re greater than 10 to the 4th and less than 10 to the 6th; Proceedings of the International Conference, London, England, Oct. 15-18, 1986. Volume 2. London, Royal Aeronautical Society, 1986, p. 18.1-18.42. refs

Work conducted on low Reynolds number aerodynamics at the Institute for Aerodynamics and Gasdynamics of the University of Stuttgart is reviewed. The general characteristics of testing in the laminar wind tunnel and model wind tunnel at the facility are described. Tests to determine the effects of hysteresis in lift and drag on the FX 63-137, the Lissaman 7669, the Miley 06-13-128, the AH 79-100 B, and the E 214 airfoils are reviewed. It is concluded that hysteresis at low Reynolds numbers is caused by two different mechanisms: at low angles of attack by transition from subcritical to supercritical state of flow and vice-versa, and at high angles of attack by bursting and reattachment of a laminar separation bubble near the leading edge. LOW-REYNOLDS NUMBER AERODYNAMICS RESEARCH AT NASA LANGLEY RESEARCH CENTER

WILLIAM D. HARVEY (NASA, Langley Research Center, Hampton, VA) IN: Aerodynamics at low Reynolds numbers Re greater than 10 to the 4th and less than 10 to the 6th; Proceedings of the International Conference, London, England, Oct. 15-18, 1986. Volume 2. London, Royal Aeronautical Society, 1986, p. 19.1-19.49. refs

The present status of various types of low-Reynolds number aerodynamics research being conducted at the Fluid Dynamics Branch of NASA Langley Research Center is reviewed. The facilities, testing techniques, airfoil design, and experimental verification are addressed, and ongoing studies of laminar separation bubbles, boundary layer stability and transition control, and low-Reynolds number juncture flow are discussed. The possibility of improving vehicle characteristics at low Reynolds numbers and the general trends of the most promising research in these areas are examined. C.D.

A88-11197

THE CALCULATION OF FLOW ABOUT AEROFOILS AT LOW REYNOLDS NUMBER WITH APPLICATION TO REMOTELY PILOTTED VEHICLES

B. R. WILLIAMS (Royal Aircraft Establishment, Farnborough, England) IN: Aerodynamics at low Reynolds numbers Re greater than 10 to the 4th and less than 10 to the 6th; Proceedings of the International Conference, London, England, Oct. 15-18, 1986. Volume 3. London, Royal Aeronautical Society, 1986, p. 22.1-22.49. refs

Experimental results from tests on five airfoils (NACA 4412, NACA 64/3/-418, Gottingen 797, Wortmann FX63-137, and GA/W/-2) are compared with calculations by a viscous-inviscid interaction method. Particular attention is paid to flows at a Reynolds number just below one million. It is shown that the theoretical method gives adequate predictions of the variation of lift and drag, and movement of the position of transition from laminar to a turbulent boundary layer with increasing incidence. The paper concludes with some suggestions for improving the viscous-inviscid interaction method, which would allow calculations at even lower Reynolds numbers. Author

A88-11198

PREDICTION OF A MICROLIGHT BIPLANE'S AEROFOIL PERFORMANCE USING A COMPUTER MODEL

P. G. WALTON (Sunderland Polytechnic, England) IN: Aerodynamics at low Reynolds numbers Re greater than 10 to the 4th and less than 10 to the 6th; Proceedings of the International Conference, London, England, Oct. 15-18, 1986. Volume 3. London, Royal Aeronautical Society, 1986, p. 23.1-23.33. refs

A project to design the wing section of the MBA Tiger Cub 440 microlight biplane is discussed. The basic airfoil found on the standard aircraft is evaluated, a high-lift device is studied, and the effect of variable airfoil geometry due to unstable properties of the fabric used to cover the wings is examined. Three approaches are used in the study: semiinverse viscous flow predictions, wind tunnel experiments, and flight tests. The usefulness of these methods is compared. C.D.

THE AERODYNAMICS OF GLIDING PARACHUTES

J. S. LINGARD (G.Q. Defence Equipment, Ltd., Parachute Div., Woking, England) IN: Aerodynamics at low Reynolds numbers Re greater than 10 to the 4th and less than 10 to the 6th; Proceedings of the International Conference, London, England, Oct. 15-18, 1986. Volume 3. London, Royal Aeronautical Society, 1986, p. 26.1-26.41. refs

The development of gliding parachutes is reviewed, and it is shown how simple aerodynamic theory explains the performance of the most successful gliding decelerator to date, the ram air parachute. The use of the same theory to identify the features limiting that performance, thus leading to the development of a parachute giving gliding efficiency considerably better than any previous nonrigid device, is shown. C.D.

A88-11202

THE EFFECT OF GRIT ROUGHNESS ON THE PERFORMANCE OF THE WORTMANN FX63-137 AIRFOIL AT A CHORD REYNOLDS NUMBER OF 100,000

ARTHUR F. HUBER, II and THOMAS J. MUELLER (Notre Dame, University, IN) IN: Aerodynamics at low Reynolds numbers Re greater than 10 to the 4th and less than 10 to the 6th; Proceedings of the International Conference, London, England, Oct. 15-18, 1986. Volume 3. London, Royal Aeronautical Society, 1986, p. 28.1-28.16. Research supported by the University of Notre Dame. refs (Contract N00014-83-K-0239)

An experimental investigation was conducted on the performance and boundary-layer characteristics of the Wortmann FX63-137 airfoil with and without distributed grit roughness. Data were obtained through use of a three-component strain gage force balance and static pressure measuring equipment at a test chord Reynolds number of $R_c = 100,000$. Emphasis was placed on determining the effect of grit placement and size on performance parameters. Prediction of the transition location by the criterion due to Klebanoff et al. (1955) was found to have limited application. In most cases airfoil performance was degraded, but in some instances minimum drag was reduced and maximum lift to drag ratio increased. Author

PRELIMINARY MEASUREMENTS OF THE FLIGHT PERFORMANCE OF AN RPV COMPARED WITH WIND TUNNEL AND CFD ESTIMATES

D. J. DYER and J. L. STOLLERY (Cranfield Institute of Technology, England) IN: Aerodynamics at low Reynolds numbers Re greater than 10 to the 4th and less than 10 to the 6th; Proceedings of the International Conference, London, England, Oct. 15-18, 1986. Volume 3. London, Royal Aeronautical Society, 1986, p. 29.1-29.14. Research supported by the Ministry of Defence. refs

The results of wind tunnel tests on replacement wings for the X-RAE 1 experimental RPV are reported and discussed. The sections used were the Goettingen 797, the Wortmann FX 63-137, and the NACA 64(3)-418. Tests over the Reynolds number range from 300,000 to 1 million showed that the 797 and the Wortmann wing sections have good performance characteristics. Comparisons with the computational model of Williams (1984) revealed that the model shows considerable promise of coping with laminar separation, transition, turbulent reattachment, and turbulent separation likely to occur in the above Re range. The addition of roughness degraded the performance of all three sections, particularly the 797. Full-scale tests on a complete RPV model clearly showed the advantages of fitting a wing of Wortmann rather than flat-bottomed section. C.D.

A88-11204

AERODYNAMICS OF UNMANNED AIRCRAFT AT FULL-SCALE IN THE RAE 24FT WIND-TUNNEL

W. J. G. TREBBLE (Royal Aircraft Establishment, Farnborough, England) IN: Aerodynamics at low Reynolds numbers Re greater than 10 to the 4th and less than 10 to the 6th; Proceedings of the International Conference, London, England, Oct. 15-18, 1986. Volume 3. London, Royal Aeronautical Society, 1986, p. 30.1-30.29. refs

Wind-tunnel tests have been made on full-scale models of the X-RAE 1 and X-RAE 2 unmanned aircraft in the RAE 24 ft wind tunnel over a Reynolds number range $(0.5-1.2) \times 10^6$ to the 6th. The results show that substantial increases in lifting capability could be achieved by choosing a wing section (Wortmann FX63-137) more appropriate to the range of Reynolds number associated with the required airspeed range from 20 m/s to 50 m/s. The UMA stalls from the root trailing-edge so the 1 deg washout provided appears to be unnecessary. The UMAs have adequate stability margins and both have powerful nose-down moments at the stall. Some increase in lift/drag ratio occurs as the Reynolds number is raised. Author

A88-11205

LOW ALTITUDE/AIRSPED UNMANNED RESEARCH AIRCRAFT (LAURA) PRELIMINARY DEVELOPMENT

RICHARD J. FOCH (U.S. Navy, Naval Research Laboratory, Washington, DC) and RANDALL E. WYATT (U.S. Navy, Office of Naval Research, Arlington, VA) IN: Aerodynamics at low Reynolds numbers Re greater than 10 to the 4th and less than 10 to the 6th; Proceedings of the International Conference, London, England, Oct. 15-18, 1986. Volume 3. London, Royal Aeronautical Society, 1986, p. 31.1-31.29. Navy-supported research. refs

The stringent constraints on the design of the Low Altitude/Airspeed Unmanned Research Aircraft (LAURA) requires the development of both highly efficient low Reynolds number airfoils and advanced airframes/systems. The aerodynamic development of multiple planform configurations are presented. Preliminary designs for aft tail twin boom, span-hinged conventional wing/tail, unswept tandem wing, and tip-joined swept tandem wing configurations are provided. Select wind tunnel test results for each configuration are also included. C.D.

A88-11206

THE PERFORMANCE OF MODEL AIRCRAFT USING FLOW INVIGORATORS, GLIDING IN THE CRITICAL RANGE OF REYNOLDS NUMBER

MARTYN S. PRESSNELL (Hatfield Polytechnic, England) IN: Aerodynamics at low Reynolds numbers Re greater than 10 to the 4th and less than 10 to the 6th; Proceedings of the International Conference, London, England, Oct. 15-18, 1986. Volume 3. London, Royal Aeronautical Society, 1986, p. 32.1-32.32. refs

The behavior of the Benedek 6356b airfoil, fitted with a leading-edge turbulator and various combinations of invigorators and operating in the critical range of Reynolds number, was investigated experimentally. The effects observed are attributed to the formation, control, and eventual collapse of vortex bubble flow in the boundary layer. This information is used to predict the gliding performance of free-flight competition models conforming to the FAI International classes F1A, F1B and for Coupe D'Hiver, and A1 glider classes. It is shown that significant advantage may be gained by operating models with an appropriate aspect ratio. Author

A88-11207

SELECTION OF AEROFOIL SECTIONS FOR USE IN MAN-POWERED AIRCRAFT

KEITH SHERWIN (Nanyang Technological Institute, Singapore) IN: Aerodynamics at low Reynolds numbers Re greater than 10 to the 4th and less than 10 to the 6th; Proceedings of the International Conference, London, England, Oct. 15-18, 1986. Volume 3. London, Royal Aeronautical Society, 1986, p. 33.1-33.8. refs

The availability and choice of airfoil sections for use in the design of man-powered aircraft are studied. In particular, the data available on the Lissaman 7769 section are reviewed and comparison is made with the equivalent aerodynamic performance of the Wortmann FX 63-137, FX 76-MP-120, and FX 76-MP-160 sections using two criteria: power/weight ratio, which is suitable for man-powered aircraft used for training, and lift/drag ratio, which is suitable for man-powered aircraft for speed/sports competition. The FX 63-137 is found to have no performance advantage; the 7769 and the FX 76-MP-120 have excellent performance. The latter can operate at higher $C(L)$ values, resulting in a smaller wing area for a given speed and hence a more compact aircraft. On the other hand, the 7769 allows for easier construction due to its simple shape and its tolerance for imperfections. C.D.

A88-11208

WIND-TUNNEL TEST RESULTS OF EPPLER 387 AEROFOILS AND COMPARISONS WITH FLIGHT TEST AND COMPUTATION

T. J. PATRICK (University College, London, England) IN: Aerodynamics at low Reynolds numbers Re greater than 10 to the 4th and less than 10 to the 6th; Proceedings of the International Conference, London, England, Oct. 15-18, 1986. Volume 3. London, Royal Aeronautical Society, 1986, p. 34.1-34.8. refs

Wind tunnel test results on the Eppler Profile 387 are compared with each other and with computational results. Free gliding characteristics of one test model are measured over a Reynolds number range of 49,000 to 68,000. A set of composite characteristics Eppler 387 airfoils is assembled, giving wind tunnel values for Re between 60,000 and 200,000 and Williams code predictions for Re above 200,000. C.D.

SMOKE-WIRE AND THIN-FILM-GAUGE OBSERVATIONS OF LAMINAR SEPARATION BUBBLES ON AN NACA 23012-64 AIRFOIL SECTION

S. S. FISHER and D. C. HORGER (Virginia, University, Charlottesville) IN: Aerodynamics at low Reynolds numbers Re greater than 10 to the 4th and less than 10 to the 6th; Proceedings of the International Conference, London, England, Oct. 15-18, 1986. Volume 3. London, Royal Aeronautical Society, 1986, p. 36.1-36.24. Research supported by the University of Virginia and U.S. Navy. refs

The smoke-wire flow visualization technique and the surface thin-film heat transfer gauge method are used here, together with surface pressure coefficient measurements, to characterize the behavior of laminar separation bubbles as they form on the suction side of a NACA 23012-64 airfoil section. Thin-film gauges are used to follow the development of unsteady flow patterns within these bubbles. Signals from the gauges are shown to be highly sensitive to flow fluctuations occurring within their immediate vicinity, up to frequencies as high as 1000 Hz. With these gauges, it is possible to detect the development of unstable oscillatory wave motions within the bubble-free shear layer which are quite small in magnitude. Signals from these gauges also provide a clear indication of transition to turbulence within this layer. It is possible to deduce the approximate point of boundary layer surface reattachment from these signals. C.D.

NUMERICAL SOLUTION OF COUPLED PROBLEMS OF SUPERSONIC FLOW PAST DEFORMABLE SHELLS OF FINITE THICKNESS [O CHISLENNOM RESHENII SVIAZANNYKH ZADACH SVERKHZVUKOVOGO OBTEKANIIA DEFORMIRUE-MYKH OBOLOCHEK KONECHNOI TOLSHCHINY]

P. N. KOROTIN, I. B. PETROV, V. B. PIROGOV, and A. S. KHOLODOV Zhurnal Vychislitel'noi Matematiki i Matematicheskoi Fiziki (ISSN 0044-4669), vol. 27, Aug. 1987, p. 1233-1243. In Russian. refs

The problem considered here concerns supersonic flow of an inviscid non-heat-conducting gas past a blunt body which simultaneously undergoes elastic deformation. The body is formed by a single-layer or a multiple-layer shell of finite thickness with specified elastic-plastic properties; the shell may be stiffened by ribs. Under the effect of a head shock wave, the body may change its shape through deflections, thus affecting gas flow. The problem is solved by using an explicit grid scheme classified as a positive approximation scheme. V.L.

STRONG GAS INJECTION INTO SUPERSONIC FLOW WITH TURBULENT MIXING [SIL'NYI VDUV GAZA V SVERKHZVUKOVOI POTOK PRI TURBULENTNOM SMESHENII]

I. I. VIGDOROVICH Prikladnaia Matematika i Mekhanika (ISSN 0032-8235), vol. 51, July-Aug. 1987, p. 600-610. In Russian. refs

Strong distributed injection of a gas through a porous plate into supersonic flow is analyzed for the case where the boundary layer is forced away from the plate and the injected gas is separated from the incoming flow by a turbulent mixing layer. A criterion for the detachment of the turbulent boundary layer during injection is formulated, as is a similarity rule reflecting the dependence of flow over the plate on the conditions at the end of the porous region. Pressure and injection layer thickness distribution curves are presented, and the force characteristics of the flow are calculated. V.L.

TRANSONIC EXPANSIONS [O TRANSVUKOVYKH RAZLOZHENIIAKH]

A. L. BREZHNEV and I. A. CHERNOV Prikladnaia Matematika i Mekhanika (ISSN 0032-8235), vol. 51, July-Aug. 1987, p. 688-690. In Russian. refs

The paper is concerned with the problem of finding particular solutions to inhomogeneous linearized transonic equations arising in transonic expansions that are expressed explicitly in terms of the principal solution to the Karman-Falkovich equation. First and second corrections to the solution for the Karman-Falkovich equation are derived. In contrast to the first correction, the second correction is shown to contain curvilinear integrals. V.L.

STABILITY OF SUPERSONIC FLOW OF AN IDEAL GAS WITH A HEAD SHOCK WAVE PAST CYLINDRICAL CHANNELS AND CAVITIES [OB USTOICHIVOSTI OBTEKANIIA TSILINDRICHESKIKH KANALOV I POLOSTEI SVERKHZVUKOVYM POTOKOM IDEAL'NOGO GAZA S GOLOVNOI UDARNOI VOLNOI]

V. T. GRIN', N. N. SLAVIANOV, and N. I. TILLIAEVA Akademiia Nauk SSSR, Izvestiia, Mekhanika Zhidkosti i Gaza (ISSN 0568-5281), July-Aug. 1987, p. 114-121. In Russian. refs

The stability of supersonic flow of an ideal gas with a head shock wave past cylindrical channels and cavities is investigated in the context of both distributed and concentrated parameter models using a first-order difference scheme with the isolation of the head shock. A stability analysis based on the linearized concentrated parameter model indicates that there exists a critical cavity length above which homogeneous supersonic flow becomes unstable. The qualitative results obtained on the basis of the concentrated parameter model are shown to support and complement the results obtained earlier from physical and numerical experiments with the distributed parameter model. V.L.

OXYGEN RECOMBINATION IN A SUPERSONIC COOLED FLOW [REKOMBINATSIIA KISLORODA V SVERKHZVUKOVOM OKHLAZHDAIUSHCHEMSIA POTOKE]

V. K. DUSHIN, I. E. ZABELINSKII, and O. P. SHATALOV Akademiia Nauk SSSR, Izvestiia, Mekhanika Zhidkosti i Gaza (ISSN 0568-5281), July-Aug. 1987, p. 160-165. In Russian. refs

Oxygen recombination in supersonic cooled flows is investigated here by the following two methods: by measuring ultraviolet emission absorption by oxygen molecules forming in a supersonic nozzle and by measuring gas pressure inside the nozzle. For this particular problem, the absorption spectroscopy method is found to be much more sensitive, making it possible to measure the recombination rate constant for low degrees of initial oxygen dissociation and at lower temperatures (1000 K). The piezoelectric method makes it possible to conduct measurements at higher temperatures for much higher (by an order of magnitude) concentrations of recombining atoms. The results obtained are compared with data in the literature, and an expression for the oxygen atom recombination rate constant is proposed. V.L.

EFFECT OF ENERGY RELEASE IN THE SHOCK LAYER ON THE SUPERSONIC FLIGHT OF BODIES [VLIANIE ENERGOVYKELEENIIA V UDARNOM SLOE NA SVERKHZVUKOVOI POLET TEL]

S. I. ARAFAILOV Akademiia Nauk SSSR, Izvestiia, Mekhanika Zhidkosti i Gaza (ISSN 0568-5281), July-Aug. 1987, p. 178-182. In Russian. refs

The presence of an energy release region in supersonic flow gives rise to perturbations propagating from the energy release source. The effect of such flow on a body is determined by the intensity of the source and by the configuration and location of the energy release region. Here, the dependence of the aerodynamic characteristic of a blunt cone on the parameters of

02 AERODYNAMICS

an energy release source is analyzed by using results of the numerical integration of equations of motion for a gas. V.L.

OPTIMAL LIFTING WINGS WITH REQUIRED LONGITUDINAL BALANCING CHARACTERISTICS [OPTIMAL'NYE NESUSHCHIE KRYL'IA S TREBUEMYMI PRODOL'NO BALANSIROVOCHNYMI KHKARAKTERISTIKAMI]

E. M. PROKHOROV Akademiia Nauk SSSR, Izvestiia, Mekhanika Zhidkosti i Gaza (ISSN 0568-5281), July-Aug. 1987, p. 185-189. In Russian. refs

The paper is concerned with infinitely thin wings producing weak perturbations in supersonic flow of an ideal gas. For a given planform and free-stream Mach number, the optimum wing surface is determined by finding a limited function of the local angles of attack corresponding to a minimal drag coefficient for given pitching moment and lifting force coefficients. The problem is solved in terms of a class of piecewise constant functions for wings of complex geometry. V.L.

EXACT AND ASYMPTOTIC EXPRESSIONS OF THE LIFT SLOPE COEFFICIENT OF AN ELLIPTIC WING

AHARON HAUPTMAN (California Institute of Technology, Pasadena) AIAA Journal (ISSN 0001-1452), vol. 25, Sept. 1987, p. 1261, 1262. refs

(Contract NR PROJECT 062-737; N00014-82-C-0043; NSF MSM-81-18429-A03)

The Hauptman and Miloh (1987) analytical treatment for the classical lifting surface problem of an elliptic planform in incompressible flow (which may be either steady or unsteady) is based on the expansion of the linearized acceleration potential in a series of ellipsoidal harmonics, and leads to very simple closed-form expressions for the aerodynamic coefficients in terms of the arbitrary aspect ratio. The asymptotic forms into which these exact expressions can be easily expanded, to any order of the aspect ratio or its inverse (in the respective cases of high and low aspect ratios), are presently obtained and compared with other existing approximations. OBSERVATIONS AND ANALYSES OF NATURAL LAMINAR FLOW OVER A NONLIFTING AIRFRAME SURFACE

PAUL M. H. W. VIJGEN (Kansas, University, Lawrence) SAE, General Aviation Aircraft Meeting and Exposition, Wichita, KS, Apr. 28-30, 1987. 14 p. refs

(Contract NAG1-345)

(SAE PAPER 871020)

A NASA-sponsored flight experiment program has been conducted with a twin-engine, propeller-driven general aviation aircraft, in order to ascertain the transition location and mode over the nonaxisymmetric fuselage forebody. Attention is given to the transition instrumentation layout and the flight test plan matrix. The results obtained for transition in varying freestream and propeller conditions will furnish insights into transition mechanisms and the significance of crossflow instability during transition in realistic nonaxisymmetric fuselage forebodies at angles of attack and sideslip. POSSIBILITIES FOR THE MODELING OF DYNAMICALLY LOADED CYLINDRICAL STRUCTURAL PARTS IN THE WIND TUNNEL [MODELLIERUNGSMOEGELICHKEITEN DER DYNAMISCHEN BELASTUNG ZYLINDRISCHER BAUWERKE IM WIND-KANAL]

F. MENACHER and J. MAIER-ERBACHER 1987 38 p In GERMAN

(KU-SFB-210/T/24; ETN-87-90370) Avail: NTIS HC A03/MF A01

The loading of cylindrical structures by the natural wind and its modelling in the wind tunnel were investigated to obtain information on random loading of thin structures. The fundamentals of random vibrations of structures under wind loading, namely the theory of multiple input linear systems, are presented. The theoretical and experimental determination of the wind speed correlations and the pressure on the structure are discussed. Theoretically as well as experimentally the vertical and horizontal transfer functions, describing the relation between speed and pressure, were separately analyzed. The errors due to this separation are discussed. The comparison between natural model measurements becomes difficult if de-integrated vortex parts reach the cylindrical structure. ESA

ANALYSES AND ASSESSMENTS OF SPAN WISE GUST GRADIENT DATA FROM NASA B-57B AIRCRAFT Final Report

WALTER FROST, HO-PEN CHANG, and ERIK A. RINGNES Aug. 1987 350 p

(Contract NAS1-17989)

(NASA-CR-178288; NAS 1.26:178288) Avail: NTIS HC A15/MF A01 CSCL 01A

Analysis of turbulence measured across the airfoil of a Canberra B-57 aircraft is reported. The aircraft is instrumented with probes for measuring wind at both wing tips and at the nose. Statistical properties of the turbulence are reported. These consist of the standard deviations of turbulence measured by each individual probe, standard deviations and probability distribution of differences in turbulence measured between probes and auto- and two-point spatial correlations and spectra. Procedures associated with calculations of two-point spatial correlations and spectra utilizing data were addressed. Methods and correction procedures for assuring the accuracy of aircraft measured winds are also described. Results are found, in general, to agree with correlations existing in the literature. The velocity spatial differences fit a Gaussian/Bessel type probability distribution. The turbulence agrees with the von Karman turbulence correlation and with two-point spatial correlations developed from the von Karman correlation. Author

ADVANCED TURBOPROP WING INSTALLATION EFFECTS MEASURED BY UNSTEADY BLADE PRESSURE AND NOISE

LAURENCE J. HEIDELBERG and RICHARD P. WOODWARD

1987 23 p Presented at the 11th Aeroacoustics Conference,

Sunnyvale, Calif., 19-21 Oct. 1987; sponsored by AIAA

(NASA-TM-100200; E-3737; NAS 1.15:100200; AIAA-87-2719)

Avail: NTIS HC A03/MF A01 CSCL 01A

A single rotation model propeller (SR-7A) was tested at simulated takeoff/approach conditions (Mach 0.2), in the NASA Lewis 9- by 15-Ft Anechoic Wind Tunnel. Both unsteady blade surface pressures and noise measurements were made for a tractor configuration with propeller/straight wing and propeller alone configurations. The angle between the wing chord and propeller axis (droop angle) was varied along with the wing angle of attack to determine the effects on noise and unsteady loading. A method was developed that uses unsteady blade pressure measurements to provide a quantitative indication of propeller inflow conditions, at least for a uniform (across the propeller disk) inflow angle. The wing installation caused a nearly uniform upwash at the propeller inlet as evidenced by the domination of the pressure spectra by the first shaft order. This inflow angle increased at a rate of almost 150 percent of that of the wing angle-of-attack for a propeller-wing spacing of 0.54 wing chords at a constant droop angle. The flyover noise, as measured by the maximum blade passing frequency level, correlates closely with the propeller inflow angle (approx. 0.6 dB per degree of inflow angle) for all droop angles and wing angles of attack tested, including the propeller alone data. Large changes in the unsteady pressure responses on the suction surface of the blade were observed as the advance ratio was varied. The presence of a leading edge vortex may explain this behavior since

02 AERODYNAMICS

changes in the location of this vortex would change with loading (advance ratio). Author

WIND-TUNNEL INVESTIGATION OF A FULL-SCALE GENERAL AVIATION AIRPLANE EQUIPPED WITH AN ADVANCED NATURAL LAMINAR FLOW WING

DANIEL G. MURRI and FRANK L. JORDAN, JR. Nov. 1987 136 p

(NASA-TP-2772; L-16283; NAS 1.60:2772) Avail: NTIS HC A07/MF A01 CSCL 01A

An investigation was conducted in the Langley 30- by 60-Foot Wind Tunnel to evaluate the performance, stability, and control characteristics of a full-scale general aviation airplane equipped with an advanced laminar flow wing. The study focused on the effects of natural laminar flow and advanced boundary layer transition on performance, stability, and control, and also on the effects of several wing leading edge modifications on the stall/departure resistance of the configuration. Data were measured over an angle-of-attack range from -6 to 40 deg and an angle-of-sideslip range from -6 to 20 deg. The Reynolds number was varied from 1.4 to 2.4×10^6 to the 6th power based on the mean aerodynamic chord. Additional measurements were made using hot-film and sublimating chemical techniques to determine the condition of the wing boundary layer, and wool tufts were used to study the wing stall characteristics. The investigation showed that large regions of natural laminar flow existed on the wing which would significantly enhance cruise performance. Also, because of the characteristics of the airfoil section, artificially tripping the wing boundary layer to a turbulent condition did not significantly effect the lift, stability, and control characteristics. The addition of a leading-edge droop arrangement was found to increase the stall angle of attack at the wingtips and, therefore, was considered to be effective in improving the stall/departure resistance of the configuration. Also the addition of the droop arrangement resulted in only minor increases in drag. Author

THE STRUCTURE OF SEPARATED FLOW REGIONS OCCURRING NEAR THE LEADING EDGE OF AIRFOILS INCLUDING TRANSITION Semiannual Status Report, May - Oct. 1987

THOMAS J. MUELLER Oct. 1987 37 p

(Contract NSG-1419)

(NASA-CR-181434; NAS 1.26:181434) Avail: NTIS HC A03/MF A01 CSCL 01A

All the time and effort was directed toward acquiring, reducing, and analyzing more hot-wire anemometer data. Some static pressure distribution data were also acquired to support the analysis of the velocity profile data. Laser Doppler Velocimetry data were not acquired due to equipment problems. Included were seven combinations of chord Reynolds number, angle of attack, and acoustic forcing using the NACA 663-018 airfoil. This research has as its objective the detailed documentation of the structure and behavior of the transitional separation bubble and the redeveloping boundary layer after reattachment over an airfoil at

low Reynolds numbers. The intent is to further the understanding of the complex flow phenomena so that analytic methods for predicting their formulation and development can be improved. These analytic techniques have applications in the design and performance prediction of airfoils operating in the low Reynolds number flight regime. Author

INTEGRATION OF DYNAMIC, AERODYNAMIC AND STRUCTURAL OPTIMIZATION OF HELICOPTER ROTOR BLADES Semiannual Status Report No. 2, 14 Apr. - 13 Oct. 1987

DAVID A. PETERS 2 Nov. 1987 34 p

(Contract NAG1-710)

(NASA-CR-181441; NAS 1.26:181441) Avail: NTIS HC A03/MF A01 CSCL 01A

The purpose of the research is to study the integration of structural, dynamic, and aerodynamic considerations in the design-optimization process for helicopter rotorblades. This is to be done in three phases. Task 1 is to bring on-line computer codes that could perform the finite-element frequency analyses of rotor blades. The major features of this program are summarized. The second task was to bring on-line an optimization code for the work. Several were tried and it was decided to use CONMIN. Explicit volume constraints on the thicknesses and lumped masses used in the optimization were added. The specific aeroelastic constraint that the center of mass must be forward of the quarter chord in order to prevent flutter was applied. The bending-torsion coupling due to cg-ea offset within the blade cross section was included. Also included were some very simple stress constraints. The first three constraints are completed, and the fourth constraint is being completed. B.G.

TRANSONIC ANALYSIS AND DESIGN OF AXISYMMETRIC BODIES IN NONUNIFORM FLOW

JEN-FU CHANG and C. EDWARD LAN Nov. 1987 77 p

(Contract NAG1-308)

(NASA-CR-4101; NAS 1.26:4101; CRINC-FRL-602-3) Avail: NTIS HC A05/MF A01 CSCL 01A

An inviscid nonuniform axisymmetric transonic code was developed for applications in analysis and design. Propfan slipstream effect on pressure distribution for a body with and without sting was investigated. Results show that nonuniformity causes pressure coefficient to be more negative and shock strength to be stronger and more rearward. Sting attached to a body reduced the pressure peak and moves the rear shock forward. Extent and Mach profile shapes of the nonuniformity region appeared to have little effect on the pressure distribution. Increasing nonuniformity magnitude made pressure coefficient more negative and moved the shock rearward. Design study was conducted with the CONMIN optimizer for an ellipsoid and a body with the NACA-0012 counter. For the ellipsoid, the general trend showed that to reduce the pressure drag, the front portion of the body should be thinner and the contour of the rear portion should be flatter than the ellipsoid. For the design of a body with a sharp trailing edge in transonic flow with an initial shape given by the NACA-0012 contour, the pressure drag was reduced by decreasing the nose radius and increasing the thickness in the aft portion. Drag reduction percentages are given. Author

A METHOD FOR THE CALCULATION OF TRANSONIC FLOWS FOR THE CONTROL OF ADAPTIVE WIND TUNNELS Ph.D. Thesis [VERFAHREN ZUR BERECHNUNG TRANSSONISCHER STROMUNGEN FUER DIE REGELUNG ADAPTIVER WINDKANAELE]

RAINER REBSTOCK 1986 122 p In GERMAN Sponsored by the Bundesministerium fuer Forschung und Technologie, West Germany (ETN-87-90411) Avail: NTIS HC A06/MF A01

Numerical methods for the adjustment of three-dimensional, adaptive test sections for wind tunnel walls were developed. The required wall form was designed by the stepwise modification of a starting contour. The bad convergence characteristics of the classical iterative adaptive method in the three-dimensional case were demonstrated theoretically and by a numerical simulation. It is shown that the replacement of the constant control factor by a matrix, which takes into account the remote Mach number and the test section geometry, allows the calculation of the adapted wall contour practically in one step. A method for the testing of three-dimensional models in wind tunnels with two flexible walls is proposed. Wall deviations, allowing the suppression of interferences on the model axis, are proposed. ESA

INVESTIGATIONS OF SEPARATED FLOW STATES ON WINGS OF MEDIUM ASPECT RATIO TAKING INTO ACCOUNT THE WIND TUNNEL INTERFERENCE PROBLEM Ph.D. Thesis [UNTERSUCHUNGEN ABGELOESTER STROMUNGSTZUSTAENDE AN TRAGFLUEGELN MITTLERER STRECKUNG UNTER BERUECKSICHTIGUNG DES WINDKANALINTERFERENZPROBLEMS]

JOHANNES KEIL 1985 208 p In GERMAN (ETN-87-90437) Avail: NTIS HC A10/MF A01

Wind tunnel experiments were conducted for the investigation of separated, subsonic flow about wings in the range of high angles of attack. The pressure distributions and aerodynamic coefficients of the wings were measured. The effect of the design parameters on the separation behavior was deduced from measurements on five wings of equal aspect ratio, but different sweep. The measurements were evaluated with a calculation method which considers the buoyancy as well as the displacement correction. Corrections were determined for the open and the closed wind tunnel test section with circular cross section with a straight rectangular wing. ESA

N88-10018# Royal Aircraft Establishment, Farnborough (England).

ON THE PROSPECTS FOR INCREASING DYNAMIC LIFT

D. G. MABEY May 1986 37 p (RAE-TM-AERO-2068; BR100237; ETN-87-90955) Avail: NTIS HC A03/MF A01

Research, mainly at low speeds, into the development of dynamic lift is reviewed. Sudden movement of aerodynamic surfaces can generate dynamic lift due to the transient development of separated flow. These dynamic effects are large and well established for airfoils. They are considered likely to be small for highly swept wings and negligible for slender wings, but there is little experimental evidence to support this inference. Dynamic lift might be increased if conventional sinusoidal motions can be replaced by appropriate periodic sawtooth motions. The control of large-scale flow separations by rapid movements of aerodynamic surfaces requires further investigation and a program of wind tunnel tests to resolve controversial issues is suggested. ESA

COMPARISON OF WIND TUNNEL AND FLIGHT TEST AFTERBODY AND NOZZLE PRESSURES FOR A TWIN-JET FIGHTER AIRCRAFT AT TRANSONIC SPEEDS

JACK NUGENT and ODIS C. PENDERGRAFT, JR. Mar. 1987 125 p (NASA-TP-2588; H-1214; NAS 1.60:2588) Avail: NTIS HC A06/MF A01 CSCL 01A

Afterbody and nozzle pressures measured on a 1/12-scale model and in flight on a twin-jet fighter aircraft were compared as Mach number varied from 0.6 to 1.2, Reynolds number from 17.5 million to 302.5 million, and angle of attack from 1 to 7 deg. At Mach 0.6 and 0.8, nozzle pressure coefficient distributions and nozzle axial force coefficients agreed and showed good recompression. At Mach 0.9 and 1.2, flow complexity caused a loss in recompression for both flight and wind tunnel nozzle data. The flight data exhibited less negative values of pressure coefficient and lower axial force coefficients than did the wind tunnel data. Reynolds number effects were noted only at these Mach numbers. Jet temperature and mass flux ratio did not affect the comparisons of nozzle axial flow coefficient. At subsonic speeds, the levels of pressure coefficient distributions on the upper fuselage and lower nacelle surfaces for flight were less negative than those for the model. The model boundary layer thickness at the aft rake station exceeded that for the forward rake station and increased with increasing angle of attack. The flight boundary layer thickness at the aft rake station was less than that for the forward rake station and decreased with increasing angle of attack. Author

THE AEROTHERMODYNAMIC ENVIRONMENT FOR HOLES IN HYPERSONIC CONFIGURATIONS

JOHN J. BERTIN, WILLIAM J. TEDESCHI, ALBINO C. BUSTAMANTE, and ERIC W. REECE (Sandia National Labs., Albuquerque, N. Mex.) Aug. 1987 34 p Presented at the AIAA Aerodynamics Flight Mechanics Conference, Monterey, Calif., 17-19 Aug. 1987

(Contract DE-AC04-76DP-00789) (DE87-014651; SAND-86-2875C-FP; CONF-870830-2-FP) Avail: NTIS HC A03/MF A01

A series of test programs have been conducted in Tunnel B of the Arnold Engineering Development Center (AEDC) in which wedges and spherically-blunted cones (with surface openings and base vents) were exposed to a Mach 8 stream. Measurements of the heat transfer and pressure from the recompression face of the external surface port were compared with the corresponding values computed using the rotational method-of-characteristics for a nonadiabatic, two-dimensional flow. The computed flow field provided reasonable estimates of the experimental measurements. Over the range of test conditions, the expansion-fan flow directly impinged on only a small fraction of the surface port recompression face and it immersed the entire recompression face. The recompression pressures and heat-transfer rates could be correlated as a function of the cavity pressure ratio. DOE

EFFECT OF EMPENNAGE ARRANGEMENT ON SINGLE-ENGINE NOZZLE/AFTERBODY STATIC PRESSURES AT TRANSONIC SPEEDS

WILLIAM P. HENDERSON and JAMES R. BURLEY, II Nov. 1987 230 p (NASA-TP-2753; L-16223; NAS 1.60:2753) Avail: NTIS HC A11/MF A01 CSCL 01A

An investigation has been conducted in the Langley 16-Foot Transonic Tunnel to determine the effects on empennage arrangement on single-engine nozzle/afterbody static pressures. Tests were done at Mach numbers from 0.60 to 1.20, nozzle pressure ratios from 1.0 (jet off) to 8.0, and angles of attack from -3 to 9 deg (at jet off conditions), depending on Mach number. Three empennage arrangements (aft, staggered, and forward) were

02 AERODYNAMICS

investigated. Extensive measurements were made of static pressure on the nozzle/afterbody in the vicinity of the tail surfaces.

WALL INTERFERENCE TESTS OF A CAST 10-2/DOA 2 AIRFOIL IN AN ADAPTIVE-WALL TEST SECTION

RAYMOND E. MINECK Dec. 1987 100 p
(NASA-TM-4015; L-16334; NAS 1.15:4015) Avail: NTIS HC A05/MF A01 CSCL 01A

A wind-tunnel investigation of a CAST 10-2/DOA 2 airfoil model has been conducted in the adaptive-wall test section of the Langley 0.3-Meter Transonic Cryogenic Tunnel (TCT) and in the National Aeronautical Establishment High Reynolds Number Two-Dimensional Test Facility. The primary goal of the tests was to assess two different wall-interference correction techniques: adaptive test-section walls and classical analytical corrections. Tests were conducted over a Mach number range from 0.3 to 0.8 and over a chord Reynolds number range from 6 million to 70 million. The airfoil aerodynamic characteristic from the tests in the 0.3-m TCT have been corrected for wall interference by the movement of the adaptive walls. No additional corrections for any residual interference have been applied to the data, to allow comparison with the classically corrected data from the same model in the conventional National Aeronautical Establishment facility. The data are presented graphically in this report as integrated force-and-movement coefficients and chordwise pressure distributions.

INTERGRATION EFFECTS OF D-SHAPED, UNDERWING, AFT-MOUNTED, SEPARATE-FLOW, FLOW-THROUGH NACELLES ON A HIGH-WING TRANSPORT

MILTON LAMB, JOHN R. CARLSON, and ODIS C. PENDERGRAFT, JR. Nov. 1987 24 p
(NASA-TM-4018; L-16342; NAS 1.15:4018) Avail: NTIS HC A03/MF A01 CSCL 01A

An experimental investigation was conducted in the Langley 16-Foot Transonic Tunnel at freestream Mach numbers from 0.70 to 0.82 and angles of attack from -3.0 to 4.0 deg to determine the integration effects of D-shaped, underwing, aft-mounted, separate-flow, flow-through nacelles on a high-wing transonic transport configuration. The results showed that the aft-mounted nacelle/pylon produced an increase in lift over that of the wing-body configuration by pressurizing much of the wing lower surface in front of the pylon. For the D-shaped nacelle, a substantial region of supersonic flow over the wing, aft of the lip of the nacelle, cancelled the reduction in drag caused by the increase in pressures ahead of the lip, to increase interference and form drag compared with a similar circular-shaped nacelle. The installed drag of the D-shaped nacelle was essentially the same as that of an aft-mounted circular nacelle from a previous investigation.

CALCULATION OF AERODYNAMIC HEAT TRANSFER FOR BLUNT-NOSED THIN WINGS AT DIFFERENT ANGLES OF ATTACK AT SUPERSONIC SPEEDS

SHUXUAN XU Nov. 1987 17 p Transl. into ENGLISH from Acta Aerodynamica Sinica (People's Republic of China), v. 4, Dec. 1986 p 398-405 Original language document was announced in IAA as A87-28338 Transl. By Kanner (Leo) Associates, Redwood City, Calif. Prepared by China Univ. of Science and Technology, People's Republic of China
(Contract NASW-4005)
(NASA-TT-20127; NAS 1.77:20127) Avail: NTIS HC A03/MF A01 CSCL 01A

A method for calculating aerodynamic heat transfer on thin wings at angles of attack is provided, based on the assumption of small cross flow and the calculation of an infinite cylinder. It is

valid in the range of supersonic and hypersonic speeds. The method does not require calculation of the details of the stream lines and can be used for various swept wings at moderate angle of attack or yaw angle. A comparison between theoretical and experimental results is given.

ANALYTICAL MODELING OF HELICOPTER STATIC AND DYNAMIC INDUCED VELOCITY IN GRASP

DONALD L. KUNZ and DEWEY H. HODGES (Georgia Inst. of Tech., Atlanta.) Nov. 1987 10 p
(NASA-TM-100026; A-87341; NAS 1.15:100026; USAAVSCOM-TR-87-A-11) Avail: NTIS HC A02/MF A01 CSCL 01A

The methodology used by the General Rotorcraft Aeromechanical Stability Program (GRASP) to model the characteristics of the flow through a helicopter rotor in hovering or axial flight is described. Since the induced flow plays a significant role in determining the aeroelastic properties of rotorcraft, the computation of the induced flow is an important aspect of the program. Because of the combined finite-element/multibody methodology used as the basis for GRASP, the implementation of induced velocity calculations presented an unusual challenge to the developers. To preserve the modelling flexibility and generality of the code, it was necessary to depart from the traditional methods of computing the induced velocity. This is accomplished by calculating the actuator disc contributions to the rotor loads in a separate element called the air mass element, and then performing the calculations of the aerodynamic forces on individual blade elements within the aeroelastic beam element.

A NATURAL LOW FREQUENCY OSCILLATION IN THE WAKE OF AN AIRFOIL NEAR STALLING CONDITIONS

K. B. M. Q. ZAMAN and D. J. MCKINZIE 1987 17 p Prepared for presentation at the 26th Aerospace Sciences Meeting, Reno, Nev., 11-14 Jan. 1988; sponsored by AIAA
(NASA-TM-100213; E-3822; NAS 1.15:100213; AIAA-88-0131) Avail: NTIS HC A03/MF A01 CSCL 01A

An unusually low frequency oscillation in the flow over an airfoil was explored experimentally. Wind tunnel measurements were carried out with a two dimensional airfoil model at a chord Reynolds number of 100,000. During deep stall the usual bluff-body shedding occurred at a Strouhal number. But at the onset of stall a low frequency periodic oscillation occurred, the corresponding Strouhal number being an order of magnitude lower. The phenomenon occurred in relatively unclean flow when the freestream turbulence was raised to 0.4 percent, but did not in the cleaner flow with turbulence intensity of 0.1 percent. It could also be produced by certain high frequency acoustic excitation. Details of the flow field are compared between a case of low frequency oscillation at $\alpha = 15$ deg and a case of bluff-body shedding at $\alpha = 22.5$ deg. The origin of the low frequency oscillation traces to the upper surface of the airfoil and is seemingly associated with the periodic formation and breakdown of a large separation bubble. The intense flow fluctuations impart significant unsteady forces to the airfoil but diminish rapidly within a distance of one chord from the trailing edge.

AIRCRAFT AND EQUIPMENT FACTORS IN THE OCCURRENCE OF SUSPENSION LINE TWISTS WITH U.S. ARMY PARACHUTES

WILLIAM P. BURKE (U.S. Army, Research Institute for the Behavioral and Social Sciences, Fort Benning, GA) *Human Factors* (ISSN 0018-7208), vol. 29, Aug. 1987, p. 483-492.

Data were collected by self-report for the trainees of two classes of the Basic Airborne Course at Fort Benning, GA, who were asked if they had developed twists in their suspension line during each of the five jumps of the course. These data were then related to the conditions of deployment for each jump - type of parachute used, type of equipment carried, type of aircraft jumped from, and so forth. The proportion of jumpers with twists during a given jump with its associated conditions of deployment was compared by the chi-square test with the proportion of jumpers with twists from other jumps made under different conditions of deployment. No effect of type of parachute on the occurrence of twists was detected, but a strong and significant effect of combat equipment was associated with an increase in the proportion of twists. There was, in addition, a significant but slightly smaller effect attributable to the type of aircraft used for jumps, with more twists occurring during jumps from the C-141 than during jumps from the C-123.

FULL-SCALE TRANSPORT CONTROLLED IMPACT DEMONSTRATION PROGRAM Final Summary Report

Sep. 1987 82 p Prepared in cooperation with NASA, Ames Research Center, Moffett Field, Calif. and FAA, Atlantic City, N.J. (NASA-TM-89642; NAS 1.15:89642; DOT/FAA/CT-87/10) Avail: NTIS HC A05/MF A01 CSCL 01C

The Federal Aviation Administration (FAA) and NASA conducted a full-scale air-to-surface impact-survivable impact demonstration with a remotely piloted transport aircraft on 1 December 1984, at Edwards Air Force Base, California. The test article consisted of experiments, special equipment, and supporting systems, such as

antimisting kerosene (AMK), crashworthiness structural/restraint, analytical modeling, cabin fire safety, flight data recorders, post-impact investigation, instrumentation/data acquisition systems, remotely piloted vehicle/flight control systems, range and flight safety provisions, etc. This report describes the aircraft, experiments, systems, activities, and events which lead up to the Controlled Impact Demonstration (CID). An overview of the final unmanned remote control flight and sequence of impact events are delineated. Preliminary post CID observations are presented.

ROBOTIC AIR VEHICLE - A PILOT'S PERSPECTIVE

JESSE BLAIR (USAF, Wright Aeronautical Laboratories, Wright-Patterson AFB, OH) and KARL E. SCHRICKER (Texas Instruments, Inc., Dallas) *IEEE Aerospace and Electronic Systems Magazine* (ISSN 0885-8985), vol. 2, Sept. 1987, p. 8-11.

The algorithms and technological features needed to develop robotic air vehicles (RAVs) are examined. The proposed RAV is an unmanned air vehicle capable of passive terrain following, terrain avoidance, obstacle avoidance, and autonomous navigation. The need to combine the remotely piloted vehicle airframe and propulsion concept with AI is discussed. RAV simulations and demonstrations have been designed. The simulations will evaluate the functioning of the RAV software algorithms during various mission scenarios, and the demonstrations will test the ability of RAVs to fly a jet aircraft, execute an instrument/qualification check, a mission ready check, and a tactical qualification check. MODERN TECHNOLOGY IN POSITIONING AND NAVIGATION; NAVIGATION MEETING, DUESSELDORF, FEDERAL REPUBLIC OF GERMANY, MAY 6-8, 1987, REPORTS [MODERNE TECHNOLOGIE IN ORTUNG UND NAVIGATION; NAVIGATIONSTAGUNG, DUESSELDORF, FEDERAL REPUBLIC OF GERMANY, MAY 6-8, 1987, VORTRAEGE]

Meeting organized and sponsored by the Deutsche Gesellschaft fuer Ortung und Navigation. Ortung und Navigation (ISSN 0474-7550), vol. 28, no. 2, 1987, 294 p. In German. For individual items see A88-10677 to A88-10688.

Technological and applications aspects of state-of-the-art positioning and navigation equipment are discussed in reviews and reports, with an emphasis on developments in the FRG. The general topics addressed include user perspectives on the impact of modern technology; the current technological status and future development trends; and applications to land, sea, and air transportation. Consideration is given to the physical and technological bases of past and present navigation methods; the impact of modern technology on ATC, ship-crew training, and transport-aircraft avionics; radio, radar, and satellite positioning systems; vessel traffic services; onboard collision-avoidance systems; and proposals for a European data network to acquire, process, and display air-traffic information. BMFT-SUPPORTED PROJECTS IN THE FIELDS POSITION-FINDING, NAVIGATION, AND TRAFFIC SAFETY [VOM BMFT GEFOERDERTE PROJEKTE DER BEREICHE ORTUNG, NAVIGATION UND VERKEHRSSICHERUNG]

H. A. HERTRICH (BMFT, Bonn, Federal Republic of Germany) (Deutsche Gesellschaft fuer Ortung und Navigation, Navigationstagung ueber moderne Technologie in Ortung und Navigation, Duesseldorf, Federal Republic of Germany, May 6-8, 1987) Ortung und Navigation (ISSN 0474-7550), vol. 28, no. 2, 1987, p. 159-168. In German.

The current status of air navigation, positioning, and traffic-safety R&D projects sponsored by the FRG Ministry of Science and Technology (BMFT) is reviewed; sample results are summarized; and future trends are indicated. The primary aims of the BMFT programs include (1) assuring FRG input into international ATC systems, (2) supporting domestic development of smaller aircraft and helicopters, (3) solving ATC problems, and (4) providing competent advice to the civil-aviation community. Specific projects in advanced avionics (fiber-optic ring-laser gyros, cockpit equipment, obstacle-warning radars, and weight/center-of-gravity measurement systems), ATC (precision DME for the ICAO MLS), and flight-control (for the A-300, A-310, and A-320) are described in more detail and illustrated with photographs. T.K.

THE IMPORTANCE OF MODERN POSITIONING AND NAVIGATION TECHNOLOGY FOR ATC [BEDEUTUNG MODERNE TECHNOLOGIE FUER ORTUNG UND NAVIGATION IN DER FLUGSICHERUNG]

J. LISCHKA (Bundesanstalt fuer Flugsicherung, Frankfurt am Main, Federal Republic of Germany) (Deutsche Gesellschaft fuer Ortung und Navigation, Navigationstagung ueber moderne Technologie in Ortung und Navigation, Duesseldorf, Federal Republic of Germany, May 6-8, 1987) Ortung und Navigation (ISSN 0474-7550), vol. 28, no. 2, 1987, p. 181-186. In German.

The developmental history and current status of ATC technology in the FRG are examined in a general overview. Topics addressed include the fundamental purposes of ATC, the goals outlined for the FRG ATC services in 1954, the capabilities of the present state-of-the-art air-situation display system DERD-MC, and the problems encountered in gaining public and user acceptance of new advanced systems. Consideration is given to the greater susceptibility of complex systems to total (rather than partial) breakdown, the introduction of MLS, microprocessor-based speech and data transmission, advanced radars and radar displays, and the use of simulators in ATC training. T.K.

In German. refs

The current development status of onboard collision-warning systems for ships and aircraft is surveyed, and the results of recent numerical simulations of the TCAS II secondary-radar/transponder system for aircraft are summarized. Topics addressed include the different requirements of marine and air traffic, the international standard Automated Radar Plotting Aid for ships, and the basic operating principles and range of applicability of TCAS II. The simulation results for typical heavy traffic conditions (such as those encountered over Britain and the FRG) indicate that TCAS II would give a traffic advisory once every 6.5-8 flight hours (or 0.2 ATC hours) and a resolution advisory about once every 15 flight hours (or 1 ATC hour). The potential advantages of a TCAS-type system for ships are considered. T.K.

A88-10688#**DEVELOPMENT STUDIES OF A EUROPEAN DATA NETWORK FOR ACQUISITION, PROCESSING, AND DISPLAY OF AIR-TRAFFIC DATA [ANSATZ ZU EINEM EUROPÄISCHEN DATENVERBUNDNETZ ZUR ERFASSUNG, VERARBEITUNG UND DARSTELLUNG VON LUFTVERKEHRSDATEN]**

HANSJUERG F. VON VILLIEZ (Eurocontrol, Maastricht, Netherlands) (Deutsche Gesellschaft fuer Ortung und Navigation, Navigationstagung ueber moderne Technologie in Ortung und Navigation, Duesseldorf, Federal Republic of Germany, May 6-8, 1987) Ortung und Navigation (ISSN 0474-7550), vol. 28, no. 2, 1987, p. 418-427. In German.

A prototype data network developed as part of a Eurocontrol/FRG/Benelux program to facilitate the international exchange of ATC radar data is described. The Radar Data Interchange Network (Radin) is designed to link the civilian ATC centers at Bremen, Duesseldorf, Brussels, Amsterdam, and Maastricht and the Dutch and Belgian military ATC centers, providing real-time flexible-format access to a wide range of information from hardware of different generations. When implemented, Radin should greatly reduce the need for verbal coordination of the transfer of ATC between neighboring centers. Plans call for gradual implementation in five phases, using the integration network structure and Common ICAO Data Interchange Network protocols for the data transmission. T.K.

A88-10728**FAST STABLE SOLUTION OF A DISPERSION EQUATION OF LINEAR FILTERING [BYSTROE USTOICHIVOE RESHENIE DISPERSIONNOGO URAVNENIYA LINEINOI FIL'TRATSII]**

A. N. KOROLLEV, ED. Radiotekhnika (ISSN 0033-8486), June 1987, p. 21-23. In Russian.

The paper examines the solution of a dispersion equation for the filtering of the primary parameters, i.e., the delay time and Doppler-frequency difference, in a four-position flight-vehicle radar system. It is shown that, for short periods of time, it is possible to increase the speed of the solution by 3-9 times without decreasing the accuracy. B.J.

A88-10874**FLIGHT DIRECTOR GUIDANCE FOR MLS**

JAMES H. BRAHNEY Aerospace Engineering (ISSN 0736-2536), vol. 7, Sept. 1987, p. 30-35.

The advantages of using MLS compared to the instrument landing system are: easier installation of the system; more channels; improved glide slope and azimuth; and increased flexibility. The flexibility provided by the multiple, curved three-dimensional approach paths of MLS is evaluated using pilot

aircraft simulations. Flight director steering commands and path guidance were computed for a straight-in approach and three complex curved paths (offset, hook, and river) using three different algorithms. The algorithms computed lateral deviation based on: (1) capturing the next straight path, (2) based on a continuous curved path, and (3) based on ground speed and nominal bank angle. If flight director steering commands were used, all three forms of guidance could be used to fly any of the curved approach paths and flight director guidance reduced all path tracking errors. A diagram of the arrangement of the flight instruments and profiles of different types of guidance are presented. I.F.

A88-12474**THE CONFLICT RESOLUTION PROCESS FOR TCAS II AND SOME SIMULATION RESULTS**

R. L. FORD (Royal Signals and Radar Establishment, Malvern, England) Journal of Navigation (ISSN 0373-4633), vol. 40, Sept. 1987, p. 283-302; Discussion, p. 302, 303. Research supported by the Civil Aviation Authority. refs

The principles underlying the Traffic Alert and Collision Avoidance System which was designed to resolve conflicts between airborne aircraft are discussed. Simulation results obtained with a fast-time computer model for random traffic are presented. They include statistics on miss distance and warning time for a simple traffic pattern. K.K.

A88-12733**REAL-TIME RECONNAISSANCE - AN ENGINEERING PERSPECTIVE**

NORMAN W. BOESE and ANTHONY S. CLARK (Control Data Corp., Minneapolis, MN) IN: Airborne reconnaissance X; Proceedings of the Meeting, San Diego, CA, Aug. 19, 20, 1986. Bellingham, WA, Society of Photo-Optical Instrumentation Engineers, 1987, p. 28-32.

New electrooptical (EO) systems are currently being developed for tactical reconnaissance. To ensure that these systems can be developed within budget, it is essential that operational and technical requirements be developed together. This paper is an attempt at defining technical capabilities and costs in terms of operational requirements. Author

A88-12737**SYNCHRONIZING VIDEO SIGNALS TO STANDARD IRIG TIME CODES**

LESTER TURNER (Video DataCom, Fountain Valley, CA) IN: Airborne reconnaissance X; Proceedings of the Meeting, San Diego, CA, Aug. 19, 20, 1986. Bellingham, WA, Society of Photo-Optical Instrumentation Engineers, 1987, p. 49-54.

An IRIG code/video signal synchronizer has been developed that generates EIA RS 170/RS170A/RS330 and NTSC compatible video synchronizing signals that are directly referenced to an input standard IRIG Type A or B modulated serial time code. When an IRIG modulated serial time code is introduced into the synchronizer, detection of the beginning of a time code frame initiates generation of the first field in the first frame (00) in the output video signal. The video synchronizing signals are phase locked to the input time code modulated carrier. A very stable crystal controlled oscillator time base in the synchronizer insures that the phase lock loop is jitter free and video signal output continues even if the input time code is removed. The output composite video synchronizing signal is able to synchronize the operation of different video signal sources and directly references their video output signals to the available IRIG modulated serial time code. TEST EQUIPMENT WITH FIBER OPTIC DATA BUS AND LASER GYRO STRAPDOWN SYSTEM LTN-90 FOR THE HELICOPTER BO-105

HANS-JUERGEN HOTOP and HANS-PETER ZENZ Apr. 1987 49 p Transl. into ENGLISH of Aufbau einer Messtechnik mit Lichtleitfasern und einem Laserkreisel-Strapdown-System LTN-90 im Hubschrauber BO-105 (Brunswick, Fed. Republic of Germany, DFVLR) 1985 Original language document announced as N86-17333

(ESA-TT-1038; DFVLR-MITT-85-10; ETN-87-90669) Avail: NTIS HC A03/MF A01; original report in German available from DFVLR, Cologne, West Germany DM 19

The measuring instruments with a MUDAS interface system for flight-testing navigation systems in the helicopter BO-105 are described. The bit-serial bus was constructed using fiber optics. The reference data from a laser gyro strapdown navigation system were corrected by application of optimal filter techniques and external measurements. The results of testing the overall system are presented, and the accuracy of the development of the reference trajectory compared with the data of the laser radar PATS is explained with reference to a test flight. GLOBAL POSITIONING SATELLITE-BASED AUTOMATIC LANDING SYSTEM AND WIND ESTIMATED FEEDBACK FOR THE AH-64 HELICOPTER Ph.D. Thesis

ABDOLLAH HOMAIFAR 1986 288 p

Avail: Univ. Microfilms Order No. DA8713429

A real time simulation of a helicopter is used to investigate the Global Positioning Satellite guidance and control during a fully automatic spiral descent and landing flare maneuver in the presence of crosswind and turbulence. The spiral descent offers a landing pattern, restricted in area, which is useful near congested airports, for both civil and military operations. It was shown that combined optimal estimation and control techniques are feasible for reduction of spiral descent guidance errors. The optimal estimation is accomplished using an extended Kalman filter, resulting in an estimated state of an aircraft and crosswind. This estimated state constitutes an input to an optimal linear regulator. Improvements in accuracy are made by adding an altimeter and body mounted accelerometers. Modifications of the steady-state, reduced-order Kalman filter are described which provide a satisfactory estimator in such cases. The results of applying these techniques to the design of an estimator for aircraft position and crosswind are presented. A design of an optimal controller for spiral descent and landing flare with augmented crosswind is also included. The linear optimal regulator theory is utilized to derive state feedback gain for guidance and control. The estimator and controller performances are verified using a Monte Carlo simulation. Dissert. Abstr.

AN EXPERT SYSTEM FOR AIRCRAFT CONFLICT RESOLUTION IN DENSE AIRSPACES

B. A. BOWEN In AGARD, Knowledge Based Concepts and Artificial Intelligence: Applications to Guidance and Control 13 p Aug. 1987 Sponsored by Transport Canada

Avail: NTIS HC A07/MF A01

A hybrid, knowledge-based system is described which provides advice to air traffic controllers on the optimal tactics for resolving predicted aircraft conflicts. The overall functional architecture is described which has both computational algorithms and rule bases containing the knowledge and experience of controllers in the air traffic environment. The system is designed to replicate the way a controller might react to a predicted conflict. It responds to conflict predictions with resolution advice, which depends on both formal rules and on heuristics obtained from controllers. Author

A RULE-BASED SYSTEM FOR ARRIVAL SEQUENCING AND SCHEDULING IN AIR TRAFFIC CONTROL

U. VOELCKERS In AGARD, Knowledge Based Concepts and Artificial Intelligence: Applications to Guidance and Control 12 p Aug. 1987

Avail: NTIS HC A07/MF A01

A rule based system is presented that is designed to assist human controllers in efficiently merging high density inbound traffic into congested airports. The rationale for the design of a rule based system and the critical requirements for the development of a rule based system for application to air traffic control are discussed. The system uses the OPS5 production system and is programmed in FRANZ LISP with embedded C functions. The system still has limited capabilities. Author

FLIGHT CHARACTERISTICS OF AIRCRAFT WITH GAS-TURBINE ENGINES [LETNYE KHARAKTERISTIKI SAMOLETOV S GAZO-TURBINNYMI DVIGATELIAMI]

BORIS VASIL'EVICH KALINICHENKO Moscow, Izdatel'stvo Mashinostroenie, 1986, 144 p. In Russian. refs

Methods are presented for the in-flight determination of the performance characteristics of turbojet and turboprop aircraft. Attention is given to measurements of aircraft speed, flight altitude, pressure, and Mach number; determination of aerodynamic corrections and their physical meaning; generalized maneuverability characteristics, and determination of the speed of turbojet and turboprop aircraft by the acceleration method. The discussion also covers the equivalent height and differential correction methods for determining the speed of horizontal flight under given conditions, maximum flight distance and time, and takeoff and landing characteristics of turbojet and turboprop aircraft. V.L.

NEW SOVIET COMMERCIAL AIRLINERS [NEUE SOWJETISCHE VERKEHRSFLUGZEUGE]

FRITZ SEIDLER (Hochschule fuer Verkehrswesen, Dresden, German Democratic Republic) Technisch-oekonomische Information der zivilen Luftfahrt (ISSN 0232-5012), vol. 23, no. 3, 1987, p. 89-100. In German.

Significant tendencies in the development of commercial aviation construction are reviewed, and new types of Soviet commercial airliners are described. Advances that have recently been made in the distance of travel, load capacity, and flight velocity of commercial airliners are addressed. The aircraft considered include the IL-114, intermediate distance Tu-204, and the long-distance IL-96-300. New types of Soviet helicopters and hybrid aircraft are also discussed. C.D.

A88-10656

THE FOURTH GENERATION OF TL COMMERCIAL AIRCRAFT [UEBER DIE 4. GENERATION DER TL-VERKEHRSFLUGZEUGE]

OTTO POLACEK (Ceskoslovenska Vedeckotechnicka Spolecnost, Prague, Czechoslovakia) Technisch-oekonomische Information der zivilen Luftfahrt (ISSN 0232-5012), vol. 23, no. 3, 1987, p. 103-107. In German. refs

Advances in commercial aircraft that are represented by the fourth generation of TL airliners are discussed. The requirements imposed on this generation of aircraft are summarized, and the use of quantitative modeling in the development of the third and fourth generation of the TL aircraft is reviewed. The development of new constructional technologies, the use of artificial materials and composites, and the economics of air travel are considered. C.D.

THE WILL TO EUROPEAN UNITY AS EXEMPLIFIED BY A320 [WILLE ZUR EUROPÄISCHEN EINHEIT AM BEISPIEL A320]

JEAN ROEDER Luft- und Raumfahrt (ISSN 0173-6264), vol. 8, 3rd Quarter, 1987, p. 38, 40, 42-44 (5 ff.). In German.

The roles of various European governments in the development of the A320 aircraft are discussed. The technology of the aircraft is briefly considered, and the A320's profile is compared with that of the A310. The aircraft's flight control surfaces, architecture, flight envelope, flight control system, load alleviation system, side-stick controller, approach configuration, and Integrated Air Data and Inertial System are shown and discussed. The aircraft's automatic monitoring and 'ministick' are addressed. C.D.

A88-10675

B-1B COMBINES BRISK LOW-ALTITUDE HANDLING, MORE CAPABLE AVIONICS

DAVID M. NORTH, BRUCE D. NORDWALL, and WILLIAM B. SCOTT Aviation Week and Space Technology (ISSN 0005-2175), vol. 127, Sept. 14, 1987, p. 54, 55, 58 (9 ff.).

The performance of the B-1B is evaluated. The systems and capabilities of the aircraft are described. Particular consideration is given to its low-altitude performance, landing characteristics, in-flight refueling capabilities, and the offensive electronic systems. The engine start and initial taxi, the ride of the aircraft, and its internal navigation system are discussed. I.F.

A88-10871

STARTING SYSTEM FOR COLD WEATHER

JAMES H. BRAHNEY Aerospace Engineering (ISSN 0736-2536), vol. 7, Sept. 1987, p. 11-14.

The use of high pressure pneumatic start systems for military tactical aircraft operating in extremely cold weather environments is examined. There are two methods for implementing a pneumatic starting system: (1) an impingement start system and (2) a pressurized air start system. The pressurized air start system is compared to electric and hydraulic starting systems in terms of weight and volume. It is observed that the pressurized air start system can be utilized without causing weight problems, but with volume penalties. The size of the air pressure vessel can be reduced by increasing the system pressure; a system pressure of 4000 psi was estimated as optimum for the start system. Proposed future improvements in pneumatic systems, in particular weight and volume reductions, are discussed. I.F.

A88-10873

AIRCRAFT TYRES

STUART BIRCH Aerospace Engineering (ISSN 0736-2536), vol. 7, Sept. 1987, p. 24-27.

The use of radial tires on aircraft is examined. The advantages provided by using aramid instead of nylon belting in the tires are discussed. The problems encountered using radials on aircraft are the deflection rate of the section height and the technical difficulties of developing a thin-walled radial. The average life for a radial tire is 200 landings; it will provide weight savings of 10-15 percent, require fewer tire changes, run cooler, and reduce foreign object damage. The tires will be useful for about 1200-2000 landings, but will require 10-12 retreads; the procedures for retreading radials are described. I.F.

A88-10875

HTTB - THE ULTIMATE TEST BED

JAMES H. BRAHNEY Aerospace Engineering (ISSN 0736-2536), vol. 7, Sept. 1987, p. 58-61.

The design and systems of the High Technology Test Bed (HTTB), which is a modified L-100-20, are described. The HTTB was designed as an airborne test platform that would provide a vehicle for integrated testing of systems to investigate STOL performance enhancements, survivability improvements, and advanced flight station designs. Consideration is given to the HTTB's structural extensions to the vertical and horizontal stabilizers, the spoiler system, the dual rotary electromechanical actuators, and the electronic system. The HTTB is applicable for evaluating navigation systems and advanced cockpit displays, and has been utilized to test the wing-mounted SAMSON (special avionics mission strap-on now) pod. A diagram of the aircraft is provided. I.F.

THE ANTONOV AN-74 BRINGS HIGH TECH TO LOW TEMPERATURES

MARK LAMBERT Interavia (ISSN 0020-5168), vol. 42, Sept. 1987, p. 907-909.

The design of the An-74, which was developed for support of all types of operations in extreme low temperatures, is described. The An-74 fuselage is 1.5 m longer than that of the An-72; the gross weight is 1500 kg greater than that of the An-72; the thrust

05 AIRCRAFT DESIGN, TESTING AND PERFORMANCE

of the turbfans is 63.7 kN each; and cruising speed is 705 km/hr. The aircraft has a maximum passenger capacity of 52 and can carry a maximum payload of 10,000 kg. The flight control/navigation and flight characteristics, such as upper surface blowing system and speeds at takeoff, are examined. I.F.

A88-11195

THE USE OF WIND TUNNEL DATA IN THE DESIGN OF RADIO CONTROLLED CONTEST MODEL SAILPLANES

MARTIN SIMONS (Adelaide, University, Australia) IN: Aerodynamics at low Reynolds numbers Re greater than 10 to the 4th and less than 10 to the 6th; Proceedings of the International Conference, London, England, Oct. 15-18, 1986. Volume 2. London, Royal Aeronautical Society, 1986, p. 20.1-20.62. refs

The tasks which a model sailplane must accomplish during a championship contest are reviewed, and the effects of changing the airfoil section and varying other important parameters pertaining to the performance of model sailplanes are mathematically investigated using wind tunnel data. Taper effects, aspect ratio effects, span effects, and the effects of flap modifications are considered. Typical sailplane dimensions and the use of wind tunnels to obtain data about airfoils are also reviewed. C.D.

A88-12412

COMPOSITE MATERIALS IN ROTORCRAFT

WALTER SONNEBORN (Bell Helicopter Textron, Inc., Fort Worth, TX) Vertiflite (ISSN 0042-4455), vol. 33, Sept.-Oct. 1987, p. 10-17.

The present evaluation of state-of-the-art helicopter and tilt-rotor aircraft structural design development notes that military rotorcraft development programs have led to virtually all-composite airframes, using highly automated composite manufacturing techniques that improve composite structures' cost-effectiveness. The applicability of these technologies throughout the helicopter manufacturing industry is discussed. Attention is given to the development status of thermosetting fiber/epoxy materials in such applications as the primary structure and the rotor hub of the V-22 Osprey military tilt-rotor aircraft. O.C.

A88-12413

COMPOSITES TECHNOLOGY IN ARMY AVIATION

JAMES P. WALLER (U.S. Army, Aviation Applied Technology Directorate, Fort Eustis, VA) Vertiflite (ISSN 0042-4455), vol. 33, Sept.-Oct. 1987, p. 18-24.

U.S. Army Aviation R&D programs in advanced helicopter structures technology have been instrumental in the development of rotorcraft applications of composite materials. Attention is given to the development status of advanced composite materials in rotor systems, propulsion components and drivetrains, airframes, and landing gears. In one case, the evaluation of composite manufacturing methods' potential for the reduction of construction costs led to the design and fabrication of the UH-60 helicopter's transition section, which demonstrated a 30-percent cost reduction. The wholesale commitment to composites came in the wake of the subsequent Advanced Composite Air Frame Program, which demonstrated improvements in structural crashworthiness as well as cost and weight savings. O.C.

PREPARE FOR THE 21ST CENTURY - THE 1987 ALEXANDER A. NIKOLSKY LECTURE

J. M. DREES American Helicopter Society, Journal (ISSN 0002-8711), vol. 32, July 1987, p. 3-14. refs

Helicopter, X-wing, and tilt-rotor VTOL aircraft configurational and component technology development trends are projected into the 21st century, in order to evaluate the prospects for speed enhancement, maneuver envelope expansion, range extension, mission complexity and payload improvement, and ease of operation in a variety of applications. Attention is given to rotary wing wake/fixed lifting surface aerodynamic interference effects in hover and cruise regimes. Variable turbomachine blading in turboshaft engines is recommended as a way of minimizing fuel consumption in cruise and furnishing auxiliary propulsion for dash

speeds. Transonic capabilities are judged to be feasible in next-generation aircraft. O.C.

HIMAT FLIGHT PROGRAM: TEST RESULTS AND PROGRAM ASSESSMENT OVERVIEW

DWAIN A. DEETS, V. MICHAEL DEANGELIS, and DAVID P. LUX Jun. 1986 30 p (NASA-TM-86725; H-1283; NAS 1.15:86725) Avail: NTIS HC A03/MF A01 CSCL 01C

The Highly Maneuverable Aircraft Technology (HiMAT) program consisted of design, fabrication of two subscale remotely piloted research vehicles (RPRVs), and flight test. This technical memorandum describes the vehicles and test approach. An overview of the flight test results and comparisons with the design predictions are presented. These comparisons are made on a single-discipline basis, so that aerodynamics, structures, flight controls, and propulsion controls are examined one by one. The interactions between the disciplines are then examined, with the conclusions that the integration of the various technologies contributed to total vehicle performance gains. An assessment is made of the subscale RPRV approach from the standpoint of research data quality and quantity, unmanned effects as compared with manned vehicles, complexity, and cost. It is concluded that the RPRV technique, as adopted in this program, resulted in a more complex and costly vehicle than expected but is reasonable when compared with alternate ways of obtaining comparable results. DESIGN PRINCIPLES AND PRACTICES FOR IMPLEMENTATION OF MIL-STD-1760 IN AIRCRAFT AND STORES Final Report, Jul. - Dec. 1986

D. E. LAUTNER, A. J. MAREK, W. M. DRUM, and R. R. FERNANDEZ Jun. 1987 432 p (Contract N60530-85-C-0091)

(AD-A183724; REPT-3-52110-6R-128) Avail: NTIS HC A19/MF A01 CSCL 01C

The trends in weapon system designs (aircraft and stores) has resulted in a growing concern over the general proliferation of aircraft-to-store electrical interfacing requirements and the resulting high cost to achieve interoperability between aircraft and stores. MIL-STD-1760 was prepared to reduce the aircraft/store electrical integration problem by specifying a standard electrical interface between aircraft and stores. The standard electrical interface is based on recognized trends in store management

systems which use serial digital transmission for control, monitor, and release of stores. This report deals with the interoperability requirements as described in MIL-STD-1760 and is intended to be an aid to understanding and meeting the requirements for both current and future weapon systems. In general, this report provides the following: (1) An overview of MIL-STD-1760 requirements, exclusions and future growth provisions. (2) Detail design considerations applicable to the Aircraft Station Interface (ASI). (3) Detail design considerations applicable to the Mission Store Interface (MSI). (4) Aircraft/Store Physical Design Considerations. (5) A commentary on the requirements in MIL-STD-1760. GRA

PROBLEM AND SOLUTION FORMULATIONS FOR THE GENERATION OF 3D BLOCK-STRUCTURED GRIDS

J. W. BOERSTOEL 3 Mar. 1986 16 p Presented at the 1st International Conference on Numerical Grid Generation in Computational Fluid Dynamics, 14-17 Jul. 1986, Landshut, Fed. Republic of Germany (NLR-MP-86020-U; B8701063; ETN-87-90825) Avail: NTIS HC A03/MF A01

The technical concepts of a method for the generation of 3D block-structured grids are presented. The generation process is decomposed in four steps: topological block decomposition; geometrical modeling of known and unknown coordinate functions; grid initialization by multilinear transfinite interpolation; and elliptic cell partitioning. The elliptic method is based on simple partial differential equations representing locally decoupled ID stretchings followed by 3D rotations. Mesh-size and smoothness control occurs with user-provided weight functions that are inversely proportional to desired mesh sizes. Test results are shown. ESA

AN OBSERVER APPROACH TO THE ESTIMATION OF HELICOPTER AIRSPEED Ph.D. Thesis - Technische Univ.

BURKHARD MUELLER Apr. 1987 152 p In GERMAN; ENGLISH summary (DFVLR-FB-87-13; ISSN-0171-1342; ETN-87-90597) Avail: NTIS HC A08/MF A01; DFVLR, Cologne, West Germany DM 52.50

Difficulties in measuring the airspeed of helicopters because of low dynamic pressures in the low airspeed regime and because of the rotor downwash influencing the flow field around the fuselage are reviewed, and a nonlinear state observer for the estimation of helicopter airspeed is described. Uncertainties in the models of helicopter dynamics affect the method. A procedure that allows a simple adaptation of the models to real conditions is presented. It is shown that parameter sensitivity can be reduced and the low static stability regime can be handled. The results are verified by flight tests. ESA

DECOUPLING AND STABILIZATION OF SPEED AND HEIGHT IN F4 PHANTOM AIRCRAFT USING OUTPUT FEEDBACK M.S. Thesis

J. M. HAMMER 1987 176 p (ETN-87-90926) Avail: NTIS HC A09/MF A01

The equations of motion of an F4 aircraft are numerically evaluated for straight and level flight at Mach 1.1 at sea level. The inputs of the system are speed demand and height demand; the outputs are speed and height, to be stabilized and decoupled using output feedback and cascade compensation. The algebraic approach, the root locus approach, and the frequency response approach are compared. The first two have considerable drawbacks, the major one being the necessity to specify exactly the pole positions in the stabilized aircraft when a large range of pole positions is acceptable. The frequency response approach, however, provides a logical and methodical means of arriving at solutions for the compensation matrix elements, with the stability

of the aircraft response being clearly displayed on a Nichols Chart. ESA

FDAD - A LAB/FIELD TEST TOOL

BRUCE FENCHEL and JOSEPH AUER (Northrop Corp., Defense Systems Div., Rolling Meadows, IL) IEEE Aerospace and Electronic Systems Magazine (ISSN 0885-8985), vol. 2, Sept. 1987, p. 5-7.

Flight Data Analysis and Display, FDAD, is a hardware and software tool that permits the monitoring of the hardware and software of a multiprocessor electronic countermeasure, ECM, system in a noninterfering mode. FDAD monitors user-defined memory addresses and hardware lines and displays in real-time the changes to these locations. Data is also stored for subsequent analysis and display. This tool allows developers to identify the operating characteristics of an extremely complex and fast system with the assurance that the instrumentation does not alter the true performance of that system. TOWARDS THE DESIGN OF AN INTELLIGENT AEROSPACE SYSTEM

M. EL-ARABATY (Military Technical College, Cairo, Egypt) IN: AIAA Computers in Aerospace Conference, 6th, Wakefield, MA, Oct. 7-9, 1987, Technical Papers. Washington, DC, American Institute of Aeronautics and Astronautics, 1987, p. 318-328. refs (AIAA PAPER 87-2844)

In dense multiple aircraft surveillance environments, radar tracking of maneuvering aircraft is difficult due to the problem of discriminating against nearby target reports in the correlation process. Three main problems are given: the multitarget tracking, the probability of detection, and the assignment algorithm operating in a dense target environment. The key performance characteristics of the designed algorithm is the flexibility for adaption to other tracking environments and incorporation into existing tracker designs. A new approach is given for the structure of a rule-based aerospace expert system. Author

EXPERT SYSTEM CONTROL FOR AIRBORNE RADAR SURVEILLANCE

ROBERT J. MCKENZIE and DAVID G. MULLENS (Boeing Aerospace Co., Seattle, WA) IN: AIAA Computers in Aerospace Conference, 6th, Wakefield, MA, Oct. 7-9, 1987, Technical Papers. Washington, DC, American Institute of Aeronautics and Astronautics, 1987, p. 353-357. refs (AIAA PAPER 87-2854)

The paper describes the application of an expert system to the control of a phased array radar. The goal of the research was to investigate operational radar control strategies which demonstrate gain in radar performance. A test bed, consisting of a prototype expert system controller and a phased array radar simulator, was built to conduct experimental runs of surveillance scenarios. The test bed was incrementally developed as a hybrid between conventional algorithmic programs and an expert system, taking advantage of the best features of each. Attention is focused on a description of the test bed and a discussion of advanced AI development environments and expert system run-time performance. Author

AIRSPEED MEASUREMENT WITH A CO2 LIDAR

BERTRAND MORBIEU and JACQUES MANDLE (Crouzet, S.A., Division Aerospaciale, Valence, France) IN: Contemporary optical instrument design, fabrication, and testing; Proceedings of the Meeting, Innsbruck, Austria, Apr. 17, 18, 1986. Bellingham, WA, Society of Photo-Optical Instrumentation Engineers, 1986, p. 220-224. Research sponsored by the Ministere de la Defense Armee de l'Air and DRET. refs

A laser Doppler technique has been developed since 1978 to provide aircraft air data calibration. A CW CO2 laser sensor performs a coherent detection of the light scattered by the aerosols sustained in the air. The instrument has successfully flown in the vibrating environments of helicopter and aircraft. Author

AIRBORNE RECONNAISSANCE X; PROCEEDINGS OF THE MEETING, SAN DIEGO, CA, AUG. 19, 20, 1986

PAUL HENKEL, ED. (General Dynamics Corp., Saint Louis, MO) and FRANCIS R. LAGESSE, ED. Meeting sponsored by SPIE. Bellingham, WA, Society of Photo-Optical Instrumentation Engineers (SPIE Proceedings. Volume 694), 1987, 176 p. For individual items see A88-12729 to A88-12751. (SPIE-694)

The present conference on airborne reconnaissance considers topics in primary data collection system design, the management of reconnaissance sensor data, reconnaissance systems' research and development status, and the achievement of real-time intelligence. Attention is given to airborne minefield detection, forest fire detection, high speed transform image compression, data link design tradeoffs for electrooptical reconnaissance systems, and airborne reconnaissance sensor pods. Also discussed CCD millimeter-wave imaging sensors, an advanced CCD reconnaissance detector, recent developments in IR data processing, and the requirements of low altitude reconnaissance. O.C.

SENSOR CONTROL/DATA DISPLAY SET (SC/DDS) FOR FILM AND/OR ELECTRO OPTICS (EO)

W. FISHELL and J. RADER (Fairchild Communications and Electronics Co., Germantown, MD) IN: Airborne reconnaissance X; Proceedings of the Meeting, San Diego, CA, Aug. 19, 20, 1986. Bellingham, WA, Society of Photo-Optical Instrumentation Engineers, 1987, p. 14-20.

Recent sensor control development systems, designed for demonstration of Electro Optics (EO) Systems, have required similar control signals as those required for film sensors. From this similarity of interface controls and functions (along with cost considerations) comes the realization that reconnaissance systems of the future must evolve in a modular fashion to produce the

level of sophistication, or complexity, required for each specific mission. Fairchild Communications and Electronics Company has developed an AN/ASQ-197, Sensor Control/Data Display Set (SC/DDS) to control sensors and annotate film in the F/A-18(R) Reconnaissance System. The AN/ASQ-197, with its programmability, is the basic building block of this hybrid system of the future, for film and/or EO. This paper presents some of the considerations and features of such a system. Author

MAGNETIC RECORDING FOR NEAR REAL TIME RECONNAISSANCE APPLICATIONS

W. D. KESSLER (Fairchild Weston Systems, Inc., Data Systems Div., Sarasota, FL) IN: Airborne reconnaissance X; Proceedings of the Meeting, San Diego, CA, Aug. 19, 20, 1986. Bellingham, WA, Society of Photo-Optical Instrumentation Engineers, 1987, p. 43-48. refs

The definition of recording for 'near real time reconnaissance' applications is reviewed along with the requirements for a recorder to be used in this application. Next the storage medium (magnetic tape) and its importance is discussed. Following this, the recording technologies available to achieve the required results are presented. Both longitudinal fixed head and helical scan rotary head technologies are considered along with some of their merits and demerits. Finally, a brief look into the future of this storage technology is presented. Author

DATALINK DESIGN TRADE-OFFS FOR ELECTRO-OPTICAL RECONNAISSANCE SYSTEMS

WILLIAM N. WAGGENER (Fairchild Weston Systems, Inc., Data Systems Div., Sarasota, FL) IN: Airborne reconnaissance X; Proceedings of the Meeting, San Diego, CA, Aug. 19, 20, 1986. Bellingham, WA, Society of Photo-Optical Instrumentation Engineers, 1987, p. 70-78.

The design of the datalink for real-time electrooptical reconnaissance systems is a function of many system variables with many conflicting requirements. The datalink design must consider cost and frequency management issues. Sensor data rate has a particularly strong impact on a number of key design parameters. As the data rate increases, RF bandwidth increases forcing the datalink to operate at higher carrier frequencies. With a fixed RF bandwidth constraint, the higher rate decreases anti-jam processing margin, increases cost and generally increases system complexity. With data compression, the bandwidth can be decreased at the expense of an increasing sensitivity to datalink errors. In this paper, the sensitivity of the datalink design to a number of the most important design requirements is examined with particular attention paid to the datalink cost and frequency management issues. A88-12741

AIRBORNE RECONNAISSANCE POD FLIGHT TEST

P. HENKEL (General Dynamics Corp., Fort Worth, TX) and R. STURZ (Recon/Optical, Inc., CAI Div., Barrington, IL) IN: Airborne reconnaissance X; Proceedings of the Meeting, San Diego, CA, Aug. 19, 20, 1986. Bellingham, WA, Society of Photo-Optical Instrumentation Engineers, 1987, p. 80-87.

An account is given of the design features and performance capabilities of a reconnaissance sensor-carrying pod for use by such tactical aircraft as the F-16. The pod design requirements call for not only a minimization of size, weight, and cost, but also the entailment of only minimal aircraft modifications for pod incorporation, and the accommodation of multiple sensor types and combinations of sensors with their associated system components. A rotatable nose compartment is used which allows both vertical and forward oblique photography in high speed low altitude reconnaissance missions that may preclude direct flight over a target site. O.C.

SENSOR CONFIGURATION FOR A SHORT TO MEDIUM RANGE RECONNAISSANCE POD

INGVAR H. JOHANSSON (FFV Aerotech, Linköping, Sweden) IN: Airborne reconnaissance X; Proceedings of the Meeting, San Diego, CA, Aug. 19, 20, 1986. Bellingham, WA, Society of Photo-Optical Instrumentation Engineers, 1987, p. 88-91.

The GREEN BARON pod is designed and developed specifically for penetrating reconnaissance and for reconnaissance up to medium distance. An Infra Red Line Scanner (IRLS) in combination with a panoramic camera are the main short range sensors, the IRLS as an all weather sensor and the panoramic camera to get horizon to horizon coverage and stereo interpretation. For reconnaissance up to medium distance the choice was a camera with 12 inch focal length. This focal length gives moderate focusing problems when operating over a wide distance range. Influence on performance caused by environment is easier to deal with compared to operating a camera with longer focal length. This paper concentrates on the reasons for choosing a focal length of 12 inches for the pod. Author

IMAGING THROUGH THE ATMOSPHERE FOR AIRBORNE RECONNAISSANCE

N. S. KOPEIKA (Negev, University, Beersheba, Israel) IN: Airborne reconnaissance X; Proceedings of the Meeting, San Diego, CA, Aug. 19, 20, 1986. Bellingham, WA, Society of Photo-Optical Instrumentation Engineers, 1987, p. 132-139. refs

Turbulence, atmospheric background, and aerosol forward scattering MTFs are presented and analyzed with regard to both low elevation rpv and high elevation reconnaissance applications. Turbulence is seen to limit image quality only at very high spatial frequencies where degradation effects are likely to take place anyway as a result of vibrational and diffraction effects. Background and aerosol MTFs limit low spatial frequency contrast as well. However, this can be overcome somewhat by proper selection of imaging wavelength. This analysis can aid in sensor selection for system design from the standpoints of both wavelength selection and sensor resolution. Author

A88-12749

ARGUMENTS FOR ELECTRO-OPTICAL RECONNAISSANCE SYSTEMS

ROBERT L. SKILLEN (Litton Industries, Inc., Itek Optical Systems Div., Lexington, MA) IN: Airborne reconnaissance X; Proceedings of the Meeting, San Diego, CA, Aug. 19, 20, 1986. Bellingham, WA, Society of Photo-Optical Instrumentation Engineers, 1987, p. 140-144.

Electrooptical (EO) digitally-recorded systems for tactical airborne reconnaissance require lower light levels for operation than film-based systems despite their greater haze-penetration capability. EO systems also allow the incorporation of a real-time imagery distribution net allowing all levels of command to see the target simultaneously; this does not jeopardize more careful subsequent study of the digital images obtained. About 10 times greater area can be covered with an EO system by an image interpreter, in comparison to the study of film on a light table. O.C.

A88-12750

SOFTCOPY VERSUS HARDCOPY

PIERRE DEMATHIEU (Matra Technology, Inc., San Jose, CA) IN: Airborne reconnaissance X; Proceedings of the Meeting, San Diego, CA, Aug. 19, 20, 1986. Bellingham, WA, Society of Photo-Optical Instrumentation Engineers, 1987, p. 145-149.

In most of the existing reconnaissance systems, the film is used as a storage medium. But more and more the photointerpreter processes the film information with the help of digital image displays. As the sensors are more and more digital or at least electronic, the film appears to be just an intermediate step, with many shortcomings. Going into completely digital systems seems to be very promising, but not very easy to do right now in respect to some operational needs. Author

A88-12751

RECENT DEVELOPMENTS IN INFRARED DATA PROCESSING

WILLIAM L. MCCracken (Honeywell, Inc., Electro-Optics Div., Lexington, MA) IN: Airborne reconnaissance X; Proceedings of the Meeting, San Diego, CA, Aug. 19, 20, 1986. Bellingham, WA, Society of Photo-Optical Instrumentation Engineers, 1987, p. 150-157.

The exceptionally great data rates generated by advanced military aircraft IR linescan sensors in low level penetration reconnaissance missions calls for the use of an automated data management system (DMS), if optimum use of onboard sensors by the crew is to be achieved. Attention is presently given to the development status of DMSs, as well as of data recorders and automatic target cuers; all employ VLSI and VHSIC implementations of dense, high speed image processing chips. Progress to date on the algorithms needed to operate the DMS and autocuer hardware is also noted. O.C.

DIGITAL SYSTEM BUS INTEGRITY Final Report

DONALD ELDREDGE and ELLIS F. HITT Mar. 1987 100 p

Prepared in cooperation with Lockheed-Georgia Co., Marietta

(Contract NAS2-11853)

(NASA-CR-181446; NAS 1.26:181446; DOT/FAA/CT-86/44)

Avail: NTIS HC A05/MF A01 CSCL 01D

This report summarizes and describes the results of a study of current or emerging multiplex data buses as applicable to digital flight systems, particularly with regard to civil aircraft. Technology for pre-1995 and post-1995 timeframes has been delineated and critiqued relative to the requirements envisioned for those periods. The primary emphasis has been an assured airworthiness of the more prevalent type buses, with attention to attributes such as fault tolerance, environmental susceptibility, and problems under continuing investigation. Additionally, the capacity to certify systems relying on such buses has been addressed. Author

NTIS HC A04/MF A01; DFVLR, Cologne, West Germany DM 37

A software concept for electronic displays suitable for a variety of applications in aviation was developed. The hardware of the display system is outlined. The programs for the symbol generator, microprocessor-bipolar, and fixed blanking windows are described. The software was implemented for the proven display technology flown in the Airbus A-310 aircraft. In the light of future developments in display technology, the software provides more features than can be utilized with the hardware currently employed. Electronic displays for a helicopter were taken to demonstrate the software details. ESA

MULTIMODES TO MACH 5

RICHARD DEMEIS Aerospace America (ISSN 0740-722X), vol. 25, Sept. 1987, p. 50-53.

Various designs for a variable cycle propulsion system for an SST are analyzed. The objectives of the multimode engine are to combine the performance capabilities of the turbofan, turbojet, ramjet, and scramjet into one design. The advantages and limitations of a turbojet, turboamjet, air turboamjet, variable cycle turbofan ramjet, turboscrumjet, and turbine bypass engine are examined and compared. It is noted that the turbine bypass engine is the most effective design proposed. I.F.

INVESTIGATION OF INTEGRATED SELECTION OF OPTIMUM ENGINE CYCLE PARAMETERS

JIN ZHANG, DAGUANG CHEN, XINGJIAN ZHU, and ZHILI ZHU (Beijing Institute of Aeronautics and Astronautics, People's Republic of China) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 7 p. Translation. Previously cited in issue 20, p. 2852, Accession no. A84-41783. refs
(ASME PAPER 87-GT-39)

A method for integrating the selection of optimal aircraft engine cycle parameters is proposed from the viewpoint of system engineering, and a control scheme is proposed which takes into account matching and interaction between the engine and the aircraft. A rapid method for predicting turbojet or turbofan engine off-design performance is adopted and an empirical formula for estimating the engine weight is developed. An augmented engine scheme that meets modification requirements is presented as an example. The results show that the optimum cycle parameters and the control scheme are quite different if the mission, modification requirements, or technical constraints are varied. Author

LOCALIZATION OF NATURAL MODES OF VIBRATION IN BLADED DISKS

O. O. BENDIKSEN (Princeton University, NJ) and N. A. VALERO ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 11 p. refs
(Contract NAG3-308)
(ASME PAPER 87-GT-46)

A study is presented of the mode localization phenomenon in imperfect blade-disk and blade-shroud-disk assemblies. The results indicate that unshrouded blades mounted on stiff disks are especially susceptible, and even small blade imperfections within manufacturing tolerances are likely to trigger mode localization. Increasing the interblade coupling by adding shrouds or reducing the disk stiffness greatly reduces the localization susceptibility, although certain modes may still become localized if the shrouds are free to slip. Author

COMPRESSOR TURBINE VANE RING (PT6 ENGINE) REPAIR DEVELOPMENT

N. SOURIAL (Pratt and Whitney Canada, Longueuil) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 5 p.
(ASME PAPER 87-GT-47)

A process for repairing the compressor turbine vane ring in the PT6 engine is described. The compressor turbine vane ring consists of 14 air-cooled vanes integrally cast from Co alloys and protected with a thin layer of diffused NiAl coating, and it is located directly at the exit of an annular combustion chamber. The repair procedure involves: subjecting the vane ring to heat treatment in a vacuum furnace; fluorescent penetrant inspection; removal of

the burnt section; welding using the tungsten insert gas method; hand blending; brazing compound application; and final inspection. It is noted that this repair technique has reduced the scrappage rate for the vane ring and an average of 100 units are repaired/month. I.F.

EXPERIMENTAL METHOD FOR THE COMBUSTION EFFICIENCY CALCULATION IN A REHEAT DUCT

A. CADIOU (ONERA, Chatillon-sous-Bagneux, France) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 7 p. SNECMA-sponsored research. refs
(ASME PAPER 87-GT-90; ONERA, TP NO. 1987-54)

An efficient method for the experimental measurement of the combustion efficiency in a reheat duct is developed, with application to the comparison of different reheat systems. The present downstream to upstream method involves static pressure measurements along the duct, and gas sampling in its outlet cross section. Results are given for a three annular V-gutters flame holder. Optimization is achieved with the present method by trading off between the length of the duct and the pressure drop induced by the flame holder. Experimental correlations concerning the effect of geometrical parameters are performed in order to optimize the size of the combustion reheat system. R.R.

ON PREDICTING THE RESONANT RESPONSE OF BLADED DISK ASSEMBLIES

J. H. GRIFFIN (Carnegie-Mellon University, Pittsburgh, PA) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 7 p. refs
(Contract F33615-84-C-2454)
(ASME PAPER 87-GT-158)

The vibratory response of blades in gas turbine engines varies because of mistuning. An approach is developed for calculating the statistical distribution of peak resonant stresses in engine blading. It is used to predict the vibratory response of an unshrouded fan stage. The results of the calculation compare favorably with test data for the lower frequency modes. The procedure can be used to predict fleet durability and offers a

practical engineering approach for dealing with stage mistuning.

VERIFICATION OF COMPRESSOR DATA ACCURACY BY UNCERTAINTY ANALYSIS AND TESTING METHODS

N. D. POTTI and D. C. RABE (USAF, Aero Propulsion Laboratory, Wright-Patterson AFB, OH) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 5 p.
(ASME PAPER 87-GT-165)

A transonic compressor designed and instrumented by the General Electric Company was recently evaluated during several test programs in the Compressor Research Facility at Wright-Patterson Air Force Base. An analytical uncertainty analysis was performed for the individual measurements, as well as the calculated performance parameters. During the tests, the experimental values of precision uncertainty were compared to the analytical predictions. The spatial variation of the individual discharge measurements was evaluated for its effect on the uncertainty of the measured parameters and calculated performance. Through the comparison of the analytical and measured uncertainty and the evaluation of spatial variation, a final uncertainty of the measured performance is presented, and the overall quality of the test results is assessed. Through these data reviews, a more accurate understanding of the performance of the test compressor is obtained. Author

PREDICTION OF GAS TURBINE COMBUSTOR-LINER TEMPERATURE

YOUSSEF S. H. NAJJAR (King Abdulaziz University, Jeddah, Saudi Arabia) and RIAD M. DROUBI ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 6 p. refs

(ASME PAPER 87-GT-177)

Broadening of fuel specifications decreases the hydrogen content and increases the aromatics and final boiling point. The cumulative effect will be an increase in soot formation hence flame radiation which affects flame tube durability. In this work an analytical study is made where empirical formulae are developed for luminosity, radiation and convection at idle and full load conditions. These equations predict combustor liner temperature with high degree of agreement with previous experimental work.

A NEW METHOD (FTDCDF) FOR THE BLADE DESIGN OF AXIAL/MIXED-FLOW COMPRESSIONS AND ITS APPLICATIONS

CHUAN-GANG GU (Xian Jiaotong University, People's Republic of China) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 7 p. refs

(ASME PAPER 87-GT-183)

A new design method with unequal work along the height of the blade in axial/mixed-flow compressors, called The Flow-Type Design of Controlled Diffusion Factors (FTDCDF), is described. The idea of the method is to control the distribution of the diffusion factors along the height of the blade in the vaneless space in order to design a blade with good aerodynamic properties. The theoretical basis of FTDCDF and its computational method are studied in detail. Comparison between the results of this method and those of others shows that the FTDCDF program has good accuracy and convergence.

THE AEROMECHANICAL RESPONSE OF AN ADVANCED TRANSONIC COMPRESSOR TO INLET DISTORTION

J. T. DATKO, JR. and J. A. O'HARA (USAF, Aero Propulsion Laboratory, Wright-Patterson AFB, OH) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 11 p. refs

(ASME PAPER 87-GT-189)

An advanced transonic compressor was tested in the Compressor Research Facility at the Aero Propulsion Laboratory. The compressor was operated with seven different total-pressure distortion screens located at the inlet, along with baseline testing of two 'clean' inlet configurations. Of particular interest was the forced vibratory response of the first-stage integrally bladed disk (blisk) to the various distortions. This paper presents a summary of the blisk vibratory responses to each of the distortion screens. Effects of instrumentation on the dynamic response of the blisk are illustrated.

THE UNITED KINGDOM ENGINE TECHNOLOGY DEMONSTRATOR PROGRAMME

W. J. CHRISPIN (Ministry of Defence /Procurement Executive/, London, England) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 8 p. (ASME PAPER 87-GT-203)

The engine technology demonstrator programs in the UK are discussed. These programs are needed to ensure that engine technologies are available prior to full-scale engineering development and to reduce development risks and costs. The programs generate fundamental design concepts and evaluate them at rig and component levels; the integrated approach used in the programs is described, and an example demonstrating its applicability is presented. The relationship between government and industry in the operation of the demonstrations, in particular funding and program management, is considered. The demonstrator

program structure from conception to transition to full-scale development is examined and a model is provided. I.F.

VELOCITY SCALED AEROELASTIC TESTING OF ADVANCED TURBOPROPS

EDWARD F. CRAWLEY and ERIC H. DUCHARME (MIT, Cambridge, MA) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 11 p. Research supported by General Electric Co. refs

(ASME PAPER 87-GT-209)

An innovative experimental procedure for the subvelocity scale testing of anisotropic aeroelastic models is developed and applied to the Advanced Turboprop. The scaling laws for an anisotropic, rotating model are developed. These scaling laws indicate that by proper choice of model geometry, stiffness, and density, all of the important aeroelastic similarity parameters can be satisfied in a full-velocity scaled test. In a subvelocity scaled test, all the similarity parameters except for the Mach number can be matched. The development of the model building technology to construct reduced stiffness anisotropic models for subvelocity scaled testing is then reviewed. In order to experimentally verify the sub-velocity scaled procedure, a propeller model was constructed based on the G.E. UDF MPS model, and the aeroelastic and performance data are favorably compared. Finally, as an illustration of the versatility of the sub-velocity scaled approach, the model is used to demonstrate the sensitivity of ATP blade flutter to mass distribution. Author

DIGITAL CONTROLS FOR GAS TURBINE ENGINES

K. ROBINSON (Dowty and Smiths Industries Controls, Ltd., Cheltenham, England) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 13 p. refs

(ASME PAPER 87-GT-211)

The functional requirements of gas turbine engine control systems and the application of electronic control systems to the fulfilling of these requirements are considered. British Civil Certification and commercial requirements for digital engine control systems (DECs) are discussed, in addition to issues involved in the trade-off between system integrity and reliability. Several Full Authority Digital Engine Controls (FADEC) programs are described, including DECs for turboshafts, turboprops, a VTOL aircraft, a large civil fan-engine, remote piloted vehicles, and augmented engines. A FADEC configuration consisting of two lanes in one and using only three microprocessors is also considered. R.R.

THE TURBOMACHINE BLADING DESIGN ACHIEVED BY SOLVING THE INVERSE FIELD PROBLEM

T. S. LUU and B. VINEY (CNRS, Laboratoire d'Informatique pour la Mecanique et les Sciences de l'Ingenieur, Orsay, France) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 6 p. refs

(ASME PAPER 87-GT-215)

The paper describes a design procedure for the determination of the geometry of the blading of the turbomachine with prescribed thickness and bound vorticity distribution. An optimized two-dimensional cascade design example is shown. The quasi-three-dimensional 'S2'-S1' stream function formulation is developed. The design of guide vanes downstream of a lateral inlet casing is described. A new approach by introducing a potential like function to treat the three-dimensional rotational flow is also formulated. Author

AGT101 - CERAMIC GAS TURBINE DEVELOPMENT

G. L. BOYD, M. L. EASLEY, and D. M. KREINER (Garrett Turbine Engine Co., Phoenix, AZ) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 17 p.

(ASME PAPER 87-GT-228)

The critical ceramic component development and the engine evaluation of the ceramic hot section in the AGT101 are described. Ceramic structure test evaluation at 2500 F, ceramic combustor operation using various fuels, and ceramic static seal leakage reduction are reported. Fabrication development of the turbine rotor is emphasized. A 100-hr engine test of the ceramic structures to 2100 F, and an 85-hr engine test of the all-ceramic hot section to 220 F, have been accomplished, and full speed operation to 100,000 rpm and a ceramic rotor tip speed of 3200 ft/sec have been demonstrated. R.R.

A TRADE-OFF STUDY OF ROTOR TIP CLEARANCE FLOW IN A TURBINE/EXHAUST DIFFUSER SYSTEM

SAEED FAROKHI (Kansas, University, Lawrence) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 7 p. refs

(ASME PAPER 87-GT-229)

In a modern gas turbine power plant, the axial exhaust diffuser accounts for up to 10 percent of the generator power. An unshrouded rotor, due to its highly energetic tip clearance flow, improves the pressure recovery characteristic of the exhaust diffuser, while the power production within the blading suffers a loss as a result of the tip leakage flow. In this paper, these conflicting trends are thermodynamically investigated and nondimensional expressions are derived which facilitate the task of a gas turbine system designer. Conservatively, 1 percent thermal efficiency gain results from elimination of the last rotor tip clearance flow. Author

BOUNDARY LAYER PROFILE INVESTIGATIONS DOWNSTREAM OF AN AERO-ENGINE INTAKE ANTI-ICING AIR EXHAUST SLOT

S. J. DOWNS (Rolls-Royce, PLC, Derby, England) and E. H. JAMES (Loughborough University of Technology, England) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 7 p.

(ASME PAPER 87-GT-237)

The boundary-layer profile downstream of the antiicing air (AIA) exhaust slot of a two-dimensional aero-engine inlet section was investigated by means of a pitot rake. Results are presented for a range of inlet air flows with and without exhaust AIA introduced. The boundary layer was found to be turbulent, owing to the presence upstream in the wind tunnel of a fixed water spray grid. Injection of AIA produced a sublayer downstream of the AIA exhaust plane. Three methods of deriving boundary-layer thickness from the experimental data were used, and the experimental measurements confirmed theoretical predictions. Author

GAS TURBINE EXHAUST SYSTEMS - DESIGN CONSIDERATIONS

ROY A. MORRIS (Cullum Detuners, Ltd., Heanor, England) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 8 p.

(ASME PAPER 87-GT-238)

This paper discusses the specifications which the prospective user of a gas turbine should give to the designer of the power-turbine exhaust system. Basic factors include the initial acoustic performance of the particular installation (considering, in particular, the inadequacy of the dBA weighting criteria for use in locations near residential areas) and the importance of multiple-set installations. Other important elements in the overall acoustic performance of an the installation are the plant design, the exhaust gas path, and the types of materials and finishes. The components

common to typical gas turbine exhaust silencer are examined in detail. An arrangement diagram is included. I.S.

HIDEC ADAPTIVE ENGINE CONTROL SYSTEM FLIGHT EVALUATION RESULTS

W. A. YONKE, R. J. LANDY (McDonnell Aircraft Co., Saint Louis, MO), and J. F. STEWART (NASA, Flight Research Center, Edwards AFB, CA) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 8 p. refs (ASME PAPER 87-GT-257)

An integrated flight propulsion control mode, the Adaptive Engine Control System (ADECS), has been developed and flight tested on an F-15 aircraft as part of the NASA Highly Integrated Digital Electronic Control program. The ADECS system realizes additional engine thrust by increasing the engine pressure ratio (EPR) at intermediate and afterburning power, with the amount of EPR uptrim modulated using a predictor scheme for angle-of-attack and sideslip angle. Substantial improvement in aircraft and engine performance was demonstrated, with a 16 percent rate of climb increase, a 14 percent reduction in time to climb, and a 15 percent reduction in time to accelerate. Significant EPR uptrim capability was found with angles-of-attack up to 20 degrees. R.R.

CYCLIC SPINNING TESTING OF AERO-ENGINE DISCS

H. AOANO, T. CHIKATA, R. SATOH, T. WAKATSUKI, and M. HIKITA (Ishikawajima-Harima Heavy Industries Co., Ltd., Tokyo, Japan) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 8 p. refs (ASME PAPER 87-GT-259)

Aero-engine disks must demonstrate sufficient low-cycle-fatigue lives. Here, results from several cyclic spinning tests are reported. During the testing, some disks were burst, and some disks were cracked. Through the experience of the testing, a technique for detecting crack initiation in the disks during spinning tests is developed. Using this technique, it is possible to stop driving before the disks would burst. Procedures and data are presented in detail. Author

WIND TUNNEL TESTING OF SMALL SCALE PRESSURE TAPPED MODEL PROPELLERS

D. W. HURST, D. T. OWEN (Southampton, University, England), and P. N. METHVEN (Dowty Rotol, Ltd., Gloucester, England) IN: Aerodynamics at low Reynolds numbers Re greater than 10 to the 4th and less than 10 to the 6th; Proceedings of the International Conference, London, England, Oct. 15-18, 1986. Volume 2. London, Royal Aeronautical Society, 1986, p. 21.1-21.22. refs

Wind tunnel tests conducted to study the scale effects resulting from the use of small-scale pressure-tapped models instead of full-scale propellers are described. The tested propeller blade had a diameter of 0.705 m and a chord of 0.049 m at 70 percent radius. The blade had 24 chordwise tapings positioned at seven spanwise stations, producing a total of 168 measuring points. Results from proving trials on this propeller model are included which show the effects of changes in rotational speed, blade angle, free-stream velocity, and number of blades on the pressure distribution. Scale effect results are reproduced for both the static running condition and nonstatic conditions. The results show that, over the measured operating range, models of this size can be safely used to represent conventional full-scale propellers. C.D.

THE DEVELOPMENT OF 270 VDC SOLID STATE POWER CONTROLLERS

R. Y. KINOSHITA, P. E. MCCOLLUM, and M. E. COLAN (Rockwell International Corp., Anaheim, CA) IN: IECEC '87; Proceedings of the Twenty-second Intersociety Energy Conversion Engineering Conference, Philadelphia, PA, Aug. 10-14, 1987. Volume 2. New York, American Institute of Aeronautics and Astronautics, 1987, p. 905-910.

The electrical, mechanical and thermal designs of microprocessor-based 270 Vdc Solid State Power Controllers (SSPCs), developed using NADC specifications, are discussed. The SSPCs combine the capabilities to perform all the needed functions of load switching, overload protection, remote control, and Built-In-Test. The Solid-State Electric Logic interface linking the system controller and the SSPC controller is described, in addition to the current monitor. The controller design is based on an eight-bit factory mask-programmable ROM CMOS microprocessor, and the main power switch is designed using power MOSFETs. Power is provided by an efficient, low power, multiple output power supply. R.R.

PLUME INFRARED SIGNATURE MEASUREMENTS AND COMPARISON WITH A THEORETICAL MODEL

SANTO COGLIANDRO and PAOLA CASTELLI (Rinaldo Piaggio - Industrie Aeronautiche e Meccaniche S.p.A., Finale Ligure, Italy) IN: Infrared technology XII; Proceedings of the Meeting, San Diego, CA, Aug. 19, 20, 1986. Bellingham, WA, Society of Photo-Optical Instrumentation Engineers, 1986, p. 73-79.

The identification of the most important parameters in the plume IR emissions of rotorcraft turboshaft engines is presently undertaken in the 1-14.5 micron band by a spectroradiometer, whose field test measurement results are then compared with those of a computer model. Spatial results, which are available in 128 x 128-element images, are important to the understanding of such phenomena as turbulence and nonaxisymmetric emission. Atmospheric transmittance and background emission are measured in order to yield the most realistic IR signatures possible. The results are being applied in a rotorcraft IR signature-suppression program. O.C.

MODELING AND MEASUREMENT OF HEAT TRANSFER ON TURBINE BLADE TIPS Ph.D. Thesis

HEE-KOO MOON 1987 229 p

Avail: Univ. Microfilms Order No. DA8711465

Local mass transfer measurements are made for flow through a narrow slot-type channel where one of the boundary walls contains a transverse rectangular cavity and the other is in motion. The study models heat transfer on the grooved tips of axial turbine blades. A naphthalene sublimation technique together with a microcomputer-controlled measurement system provides detailed local mass transfer information. Overall mass transfer is not measurably affected by the moving boundary for cavity depth-to-width ratios of 0.10, 0.25, 0.50, 1.00, and 1.50. As cavity depth increases, overall mass transfer stays essentially the same until the immediate depth-to-width ratio of 0.5 is reached, then increases. The direction of the moving wall relative to the mean flow direction does not effect the overall mass transfer but does change local distributions, especially on the cavity floor and side walls. Stanton number averaged over the entire tip area decreases exponentially with gap Reynolds number over the test range of .38 to 3.6×10 to the 4th power, but overall mass transfer increases. Gap clearance is inversely related to overall mass transfer and influences significantly the local mass transfer distribution in the gap regions. Dissert. Abstr.

FLAME DRIVING OF LONGITUDINAL INSTABILITIES IN LIQUID FUELED DUMP COMBUSTORS Final Report, 1 Jul. 1984 - 30 Jun. 1987

BEN T. ZINN, UDAY G. HEGDE, DIERK REUTER, and B. R. DANIEL 1 Jul. 1987 114 p

(Contract N00014-84-K-0470)

(AD-A183536) Avail: NTIS HC A06/MF A01 CSDL 21B

This report describes the results of experimental and theoretical investigations of the mechanisms by which the core flow combustion process in coaxial, single inlet, dump type ramjet engines drives longitudinal combustion instabilities. To this end, the behavior of V-shaped flames, similar to those often occurring in ramjet combustors, stabilized in longitudinal acoustic fields has been studied. The presence of burning vortical structures is observed in the flame region. These structures appear at frequencies close to the first natural acoustic frequency of the combustor and are believed to be connected with a shear layer type of instability of the flame. Experiments conducted show that the unsteady combustion in these structures is capable of driving the acoustics at the fundamental acoustic mode frequency. With increase in fuel air ratio, a spontaneous instability involving the fundamental mode is observed and explained in terms of increased driving associated with the higher, unsteady heat release rates. The results of experiments conducted with external acoustic excitation of the flame at different frequencies are also reported and confirm the idea that the vortical structures arise due to a fluid mechanical instability of the flame. It is shown that the interactions between the vortical structures and the system's acoustic field affect the heat release rates from the flame and provide a mechanism for the driving of longitudinal mode instabilities. INVESTIGATION OF THE EXCITATION OF TURBINE BLADE VIBRATION IN AXIAL COMPRESSORS IN ROTATING STALL
Final Report [UNTERSUCHUNG DER SCHWINGUNGSERREGUNG VO LAUFSCHAUFELN IN AXIALVERDICHTERN BEI ROTATING STALL]

W. MOLL Oct. 1986 64 p In GERMAN
(Contract DFG-KO-786/2-3-DER)
(ETN-87-90377) Avail: NTIS HC A04/MF A01

Measurements were performed on the seven-stage axial compressor of a gas turbine to study the characteristics of the rotating separation zones in the first stages and their effects on the production of vibrations. A contactless optoelectronic measuring system for rotating compressor turbines was developed. The unsteady flow quantities in the seven-stage compressor in rotating stall were determined using the split-film-probe measuring technique. A calculation model for the prediction of the compressor behavior in the first stage of the axial compressor was developed on the basis of a nonlinear theory. ESA

EXPERIMENTAL DETERMINATION OF THE OSCILLATORY FORCES ON TWO TURBINE BLADE PROFILES Ph.D. Thesis
[EXPERIMENTELLE BESTIMMUNG DER SCHWINGUNGSERREGERKRAEFTE ZWEIER TURBINENSCHAUFELPROFILE]

MICHAEL HUBENSTEINER 1986 151 p In GERMAN
Sponsored by Deutschen Forschungsgemeinschaft, West Germany
(ETN-87-90417) Avail: NTIS HC A08/MF A01

The behavior of two 50%-reaction blades of different profile shape in the case of cascade interference under steady and unsteady flow was investigated in a cascade wind tunnel. The pressure distribution along the blade profiles was measured as a function of the relative position of the blades. The friction wake for both profiles was determined for different cascade distances. The unsteady pressure distribution on the blade profiles was measured in an air test turbine, and the oscillatory forces were deduced. The amplitude of the oscillation depends on the axial distance between the cascades, the velocity triangles in the stage, and the relative position of the blades in the neighboring oscillating cascade. Harmonics of the oscillatory forces were observed. The results show that production defects in the cascades can lead to significant unsteady forces on the blades. ESA

BLADE LOSS TRANSIENT DYNAMICS ANALYSIS, VOLUME 1. TASK 2: TETRA 2 THEORETICAL DEVELOPMENT Final Report

VINCENTE C. GALLARDO and GERALD BLACK Nov. 1986 92 p
(Contract NAS3-24381)
(NASA-CR-179632; NAS 1.26:179632) Avail: NTIS HC A05/MF A01 CSCL 21E

The theoretical development of the forced steady state analysis of the structural dynamic response of a turbine engine having nonlinear connecting elements is discussed. Based on modal synthesis, and the principle of harmonic balance, the governing relations are the compatibility of displacements at the nonlinear connecting elements. There are four displacement compatibility equations at each nonlinear connection, which are solved by iteration for the principle harmonic of the excitation frequency. The resulting computer program, TETRA 2, combines the original TETRA transient analysis (with flexible bladed disk) with the steady state capability. A more versatile nonlinear rub or bearing element which contains a hardening (or softening) spring, with or without deadband, is also incorporated. Author

BLADE LOSS TRANSIENT DYNAMICS ANALYSIS, VOLUME 2. TASK 2: TETRA 2 USER'S MANUAL Final Report

GERALD BLACK and VINCENTE C. GALLARDO Nov. 1986 204 p
(Contract NAS3-24381)
(NASA-CR-179633; NAS 1.26:179633) Avail: NTIS HC A10/MF A01 CSCL 21E

This is the user's manual for the TETRA 2 Computer Code, a program developed in the NASA-Lewis Blade Loss Program. TETRA 2 calculates a turbine engine's dynamic structural response from applied stimuli. The calculation options are: (1) transient response; and (2) steady state forced response. Based on the method of modal syntheses, the program allows the use of linear, as well as nonlinear connecting elements. Both transient and steady state options can include: flexible Bladed Disk Module, and Nonlinear connecting elements (including deadband, hardening/softening spring). The transient option has the additional capability to calculate response with a squeeze film bearing module. TETRA 2 output is summarized in a plotfile which permits post processing such as FFT or graphical animation with the proper software and computer equipment. Author

SYNTHESES OF REDUCED-ORDER CONTROLLERS FOR ACTIVE FLUTTER SUPPRESSION

ATSUSHI FUJIMORI and HIROBUMI OHTA *Japan Society for Aeronautical and Space Sciences, Journal (ISSN 0021-4663), vol. 35, no. 402, 1987, p. 353-362. In Japanese, with abstract in English. refs*

Reduced-order controllers for active flutter suppression of a two-dimensional airfoil are studied using two design approaches. One is based on the generalized Hessenberg representation (GHR) in the time domain, and the other, called the Nyquist frequency approximation (NFA), is a method in the frequency domain. In the NFA method, the reduced-order controllers are designed so that the stability margin of the Nyquist plot may be increased over a specific frequency range. To illustrate and to make a comparison between the two methods, numerical simulations are carried out using a thirteenth-order controlled plant. It is to be noted that the GHR method can yield quasi-optimal controllers in the sense of minimizing quadratic performance indices. The designed controllers, however, do not have enough stability margin, and the order reduction resulting from full state controllers may not be satisfactory. On the other hand, reduced-order controllers in the NFA method can be designed with increased stability margin at the expense of the performance index. For all simulation cases, the NFA method yields second-order controllers with a better stability margin than those by the GHR method. Thus, the NFA method provides an effective method for synthesizing robust reduced-order controllers. Author

FLYING COMPLEX APPROACH PATHS USING THE MICROWAVE LANDING SYSTEM

CHARLES E. KNOX (NASA, Langley Research Center, Hampton, VA) *IN: Aerospace Behavioral Engineering Technology Conference, 5th, Long Beach, CA, Oct. 13-16, 1986, Proceedings . Warrendale, PA, Society of Automotive Engineers, Inc., 1986, p. 65-82. refs*

(SAE PAPER 861771)

A piloted simulation study was conducted to examine the requirements for using electromechanical flight instrumentation to provide guidance for manually controlled flight along complex, curved approach paths within the microwave landing system signal coverage. The data from these tests indicated that flight director guidance is required for the manually controlled flight of a jet transport airplane on complex, curved approach paths. Each of the three guidance algorithms tested could be used to fly the paths. However, pilot comments indicated that the use of guidance based on capturing the next straight path segment may not be acceptable since full-scale lateral deflections normally resulted during turns. Pilot comments indicated that all the approach paths tested could be used in normal airline operations. Approach paths with both multiple, sequential turns and short final path segments were demonstrated. Author

IMPROVEMENTS IN AIRCRAFT SAFETY AND OPERATIONAL DEPENDABILITY FROM A PROJECTED FLIGHT PATH GUIDANCE DISPLAY

JOHN DESMOND (Flight Dynamics, Inc., Portland, OR) *IN: Aerospace Behavioral Engineering Technology Conference, 5th, Long Beach, CA, Oct. 13-16, 1986, Proceedings . Warrendale, PA, Society of Automotive Engineers, Inc., 1986, p. 113-124. refs*

(SAE PAPER 861732)

The advantages that can be gained in aircraft safety and operating dependability through the use of projected flight path guidance are discussed. During a test program developed to determine the improvement in approach path control and touchdown precision afforded by a projected flight path display, it was found that the availability of this information reduced the touchdown footprint, eliminated the short and long landings, and reduced the number of go-arounds from six to zero. With the inertial flight path, pilots can identify not only the windshear event, but also the effect of the shear and the pilot's recovery action against it. The ability of pilots using the HUD Guidance System to meet the requirements of CAT III operations is evaluated. K.K.

THE ADVANTAGE OF FLIGHTPATH-ORIENTED SITUATION DISPLAYS DURING MICROBURST ENCOUNTERS

J. G. OLIVER (Air Line Pilots Association, Washington, DC) *IN: Aerospace Behavioral Engineering Technology Conference, 5th, Long Beach, CA, Oct. 13-16, 1986, Proceedings . Warrendale, PA, Society of Automotive Engineers, Inc., 1986, p. 125-127.*

(SAE PAPER 861733)

It is maintained that the conventional instruments mounted in commercial cockpits today do not adequately provide the information necessary to enable a pilot to recognize the onset of a microburst early enough or to fly an optimum flightpath thereafter. An integrated instrument display that would portray the aircraft's actual flightpath integrated with an efficient, confusion-free display of airspeed or angle of attack and altitude above terrain is needed. It is concluded that the accident rate will remain the same until a predictive detection device is developed or flight-path oriented instrumentation is made available. K.K.

AIRLINE REQUIREMENTS ON A FLY-BY-WIRE AIRCRAFT - A PILOT'S VIEW

PETER H. HELDT (Deutsche Lufthansa AG, Cologne, Federal Republic of Germany) IN: Aerospace Behavioral Engineering Technology Conference, 5th, Long Beach, CA, Oct. 13-16, 1986, Proceedings. Warrendale, PA, Society of Automotive Engineers, Inc., 1986, p. 177-179.
(SAE PAPER 861804)

The advantages of a fly-by-wire aircraft include added safety features, improved handling characteristics, reduction of training costs, and more flexibility in flight deck arrangement. The paper discusses the ways in which these features match the operational requirements of airlines. Particular attention is given to the flight deck arrangement, system architecture, the controller, handling, training, control laws and safety, and evaluation. K.K.

A MATHEMATICAL MULTI-POINT MODEL FOR AIRCRAFT MOTION IN MOVING AIR

R. BROCKHAUS (Braunschweig, Technische Universitaet, Brunswick, Federal Republic of Germany) Zeitschrift fuer Flugwissenschaften und Weltraumforschung (ISSN 0342-068X), vol. 11, May-June 1987, p. 174-184. refs

The nonlinear equations of aircraft motion in moving air are introduced and their interactions illustrated by block diagrams. This mathematical model reflects the fact that wind and aircraft motion are strongly coupled, aircraft forces and moments being generated by the relative motion between the air and the aircraft. The usual one-point model is first considered, using the classical approach of overall quasi-steady derivatives. This is developed to provide a multipoint model, in which the effects of aircraft rotation, wind gradients, wing downwash, and engine flow can be modeled more precisely by a generalized approach. Quasi-steady terms are replaced by the calculation of local velocities and forces. This approach has great potential for improving the accuracy with which aircraft motion is simulated. C.D.

RECENT TILT ROTOR FLIGHT CONTROL LAW INNOVATIONS

DWAYNE F. KIMBALL (Bell Helicopter Textron, Fort Worth, TX) American Helicopter Society, Journal (ISSN 0002-8711), vol. 32, July 1987, p. 33-42. refs

This paper describes three distinct control law functions recently developed in conjunction with full-scale development of the Bell-Boeing V-22 Osprey tilt rotor. Two of these are designed to improve the speed response of the aircraft. The first quickens thrust response to power lever inputs by varying propeller RPM through a governor feedforward circuit. The second gives the power lever direct control of an aerodynamic brake formed by the aircraft's flaperon control surfaces. The third control law function is a model follower concept for mast torque control which protects against drive system overtorque and reduces thrust axis workload in all flight modes. The paper discusses the handling qualities of the aircraft that prompted the development of these functions, and the improvements resulting from each as determined by analysis and flight simulation. FLUTTER SUPPRESSION AND GUST LOAD ALLEVIATION. PART 1: RESULTS OF PHASE 1 TO 3. PART 2: DESCRIPTION OF THE GARTEUR MODEL

H. HOENLINGER, R. MANSE, and D. MUSSMANN 20 Mar. 1985 64 p
(MBB-LKE292/S/PUB/191; ETN-87-90579) Avail: NTIS HC A04/MF A01

An adaptive flutter suppression system using target functions to adjust gain and phase of the control law was developed. The system was installed in a flutter model and tested successfully. The flutter speed can be increased 38%. A gust load alleviation system was developed and tested on the model. Flutter suppressor and gust load alleviation systems were combined and investigated under gusts. The wing root bending moment of the model can be decreased considerably. The model used for testing active control technology is described. It is a dynamically scaled subsonic model with hydraulically driven control surfaces. Basic geometry and mass data are given. The model instrumentation, model suspension, and wind tunnel test set up is explained. ESA

INVESTIGATION OF INTERACTIONS BETWEEN LIMB-MANIPULATOR DYNAMICS AND EFFECTIVE VEHICLE ROLL CONTROL CHARACTERISTICS Final Report

D. E. JOHNSTON and D. T. MCRUER Washington NASA May 1986 65 p Previously announced as N86-32991 (Contract NAS2-11454)
(NASA-CR-3983; H-1320; NAS 1.26:3983) Avail: NTIS HC A04/MF A01 CSCL 01C

A fixed-base simulation was performed to identify and quantify interactions between the pilot's hand/arm neuromuscular subsystem and such features of typical modern fighter aircraft roll rate command control system mechanization as: (1) force sensing side-stick type manipulator; (2) vehicle effective roll time constant; and (3) flight control system effective time delay. The simulation results provide insight to high frequency pilot induced oscillations (PIO) (roll ratchet), low frequency PIO, and roll-to-right control and handling problems previously observed in experimental and production fly-by-wire control systems. The simulation configurations encompass and/or duplicate actual flight situations, reproduce control problems observed in flight, and validate the concept that the high frequency nuisance mode known as roll ratchet derives primarily from the pilot's neuromuscular subsystem. The simulations show that force-sensing side-stick manipulator force/displacement/command gradients, command prefilters, and flight control system time delays need to be carefully adjusted to minimize neuromuscular mode amplitude peaking (roll ratchet tendency) without restricting roll control bandwidth (with resulting sluggish or PIO prone control). MEASUREMENTS IN THE FUNCTIONAL MOCK UP TEST OF THE NAL QSTOL AIRCRAFT CONTROL SYSTEM

AKIRA TADA, TOSHIO OGAWA, HIROYUKI YAMATO, TADAO UCHIDA, and NORIAKI OKADA Apr. 1987 30 p In JAPANESE; ENGLISH summary
(NAL-TR-928; ISSN-0389-4010) Avail: NTIS HC A03/MF A01

In the functional mock up test of the NAL QSTOL research aircraft control system, measurements were planned and conducted with the intention of obtaining both real time results to support the development immediately, and reserved data suitable for academically rigorous and detailed analyses from various points of view. The physical quantities of 208 system variables were converted to analog voltage signals, and supplied from junction boxes to devices for recording and analysis. The system characteristics of primary interest in each test were investigated using chart recorders, a two-channel X-Y recorder, an FFT analyzer, and a monitoring unit of the on-board computers. A pre-processor unit of a minicomputer system converted 64 channels of the analog data to disk image digital data with a sampling rate of 100 Hz for each channel. Up to two hours of test data were temporarily stored

in the desk file, and then, as a part of near time processings, were transferred to magnetic tapes for preservation. A digital filtering and sampling technique, designated the Filtering Sample, was applied to the conversion of the pre-processor unit. The Filtering Sample showed a good anti-aliasing effect within a reasonable increment of the processing work load. Author

A SURVEY OF AIRCRAFT INTEGRATED CONTROL TECHNOLOGY

R. D. HILL Sep. 1987 28 p
(AR-004-561; ARL-SYS-TM-95) Avail: NTIS HC A03/MF A01

Current design techniques applied to aircraft flight control systems have been surveyed and the increasing use of modern control theory in the control system design of experimental technology demonstrator aircraft is described. The modern control system design methodology is seen to be particularly suitable for application to the design of controllers for complex, multivariable aircraft systems which are composed of dynamically interacting subsystems. These will typically include the flight control, propulsion, and weapon systems. Some suggestions regarding the most appropriate form of future ARL involvement in this large and expanding area are made. Author

A PRELIMINARY INVESTIGATION INTO THE FEASIBILITY OF IMPLEMENTING A DIRECT SIDEFORCE CONTROL SYSTEM ON THE ASTRA HAWK BY MEANS OF AN ACTIVE CONTROL SURFACE M.S. Thesis

V. A. ENGLISH Sep. 1986 196 p
(ETN-87-90924) Avail: NTIS HC A09/MF A01

A computer program to test the effect of an auxiliary surface by simulating the direct sideforce modes of motion, in order to estimate the maximum mode performance benefits, was developed. The program is written as a design tool, which incorporates data for the flight envelope from Mach 0.3 to 0.8 and from sea level to 36,000 ft, for the basic aircraft, with provision to add in derivatives due to the auxiliary surface. The program can be used to re-evaluate the behavior of the aircraft with auxiliary surface as the aerodynamics, geometry of the surface, position of the surface on the airframe, and hence derivatives of the surface are revised. THE APPLICATION OF EMULATION TECHNIQUES IN THE ANALYSIS OF HIGHLY RELIABLE, GUIDANCE AND CONTROL COMPUTER SYSTEMS

GERARD E. MIGNEAULT /n AGARD, Fault Tolerant Considerations and Methods for Guidance and Control Systems 12 p Jul. 1987

Avail: NTIS HC A07/MF A01 CSCL 01C

Emulation techniques can be a solution to a difficulty that arises in the analysis of the reliability of guidance and control computer systems for future commercial aircraft. Described here is the difficulty, the lack of credibility of reliability estimates obtained by analytical modeling techniques. The difficulty is an unavoidable consequence of the following: (1) a reliability requirement so demanding as to make system evaluation by use testing infeasible; (2) a complex system design technique, fault tolerance; (3) system reliability dominated by errors due to flaws in the system definition; and (4) elaborate analytical modeling techniques whose precision outputs are quite sensitive to errors of approximation in their input data. Use of emulation techniques for pseudo-testing systems to evaluate bounds on the parameter values needed for the analytical techniques is then discussed. Finally several examples of the application of emulation techniques are described. Author

SOME APPROACHES TO THE DESIGN OF HIGH INTEGRITY SOFTWARE

J. T. SHEPHERD, D. J. MARTIN, and R. B. SMITH /n AGARD, Fault Tolerant Considerations and Methods for Guidance and Control Systems 14 p Jul. 1987 Sponsored by Ministry of Defence, United Kingdom

Avail: NTIS HC A07/MF A01

As the complexity of aircraft systems has increased and the performance requirements for such aircraft have become more demanding the number of safety critical systems carried has increased. This allied to the preponderance of digital systems on board the aircraft has meant that the software requirements of safety critical systems have become one of the key items in the development of new aircraft. In the early days of high integrity systems analog techniques were used and a variety of redundancy techniques developed to cope with the need to obtain the required level of integrity from system elements whose inherent reliability was low. With the advent of digital systems it is necessary to consider how much integrity can be achieved with system software so that the total integrity of a safety critical system can be maintained. This can be achieved by fault avoidance or fault tolerance. To date the former has been the main method used to achieve high integrity software. However, fault avoidance to be effective must assume an error free system, which is near impossible to achieve. Fault avoidance is combined with fault tolerance, which adjusts the system to its inherent errors, and is added to assure greater reliability. F.M.R.

ROBUST CONTROL SYSTEM DESIGN

J. ACKERMANN /n AGARD, Fault Tolerant Considerations and Methods for Guidance and Control Systems 14 p Jul. 1987 Previously announced as N81-11275

Avail: NTIS HC A07/MF A01

The short period longitudinal mode of an F 4-E with horizontal canards is unstable in subsonic flight and insufficiently damped at supersonic speed. The control system has to provide acceptable pole locations according to military specifications for flying qualities. A fixed gain controller using three paralleled gyros is designed, such that the pole region requirements in four typical flight conditions are robust with respect to a gain reduction to one third. Thus nothing bad happens immediately when one or two gyros fail. Failure detection and redundancy management may be performed at a higher hierarchical level, and not necessarily extremely fast. The use of accelerometers or air data sensors for angle of attack or dynamic pressure is totally avoided in this concept and no gain scheduling is necessary. The design for robustness with respect to different flight conditions and sensor failures is performed by a novel parameter space design tool. Author

RELIABILITY MODELING OF FAULT-TOLERANT COMPUTER BASED SYSTEMS

SALVATORE J. BAVUSO /n AGARD, Fault Tolerant Considerations and Methods for Guidance and Control Systems 16 p Jul. 1987

Avail: NTIS HC A07/MF A01 CSCL 01C

Digital fault-tolerant computer-based systems have become commonplace in military and commercial avionics. These systems hold the promise of increased availability, reliability, and maintainability over conventional analog-based systems through the application of replicated digital computers arranged in fault-tolerant configurations. Three tightly coupled factors of paramount importance, ultimately determining the viability of these systems, are reliability, safety, and profitability. Reliability, the major driver affects virtually every aspect of design, packaging, and field operations, and eventually produces profit for commercial applications or increased national security. However, the utilization

08 AIRCRAFT STABILITY AND CONTROL

of digital computer systems makes the task of producing credible reliability assessment a formidable one for the reliability engineer. The root of the problem lies in the digital computer's unique adaptability to changing requirements, computational power, and ability to test itself efficiently. Addressed here are the nuances of modeling the reliability of systems with large state sizes, in the Markov sense, which result from systems based on replicated redundant hardware and to discuss the modeling of factors which can reduce reliability without concomitant depletion of hardware. Advanced fault-handling models are described and methods of acquiring and measuring parameters for these models are delineated. Author

OPTIMAL DETECTION OF SENSOR FAILURES IN FLIGHT CONTROL SYSTEMS USING DETERMINISTIC OBSERVERS

NORBERT STUCKENBERG /In AGARD, Fault Tolerant Considerations and Methods for Guidance and Control Systems 21 p Jul. 1987

Avail: NTIS HC A07/MF A01

A failure detection scheme for sensors of a flight control system is presented. Based on analytic redundancy a duplex sensor configuration provides the fail-operational capability of a conventional triplex sensor system. This is achieved by using deterministic observers. It is shown how the performance of the failure detection scheme can be determined. With respect to this performance criterion the optimal observer is derived. Thus, the performance eventually achievable by an optimal failure detection scheme is also described. The operational feasibility of the proposed concept is demonstrated by flight test results. ASSESSMENT OF SOFTWARE QUALITY FOR THE AIRBUS A310 AUTOMATIC PILOT

R. TROY and C. BALUTEAU (Societe Francaise d'Equipements pour la Navigation Aeriennne, Velizy-Villacoublay, France) /In AGARD, Fault Tolerant Considerations and Methods for Guidance and Control System 13 p Jul. 1987

Avail: NTIS HC A07/MF A01

As for the whole of the Automatic Flight Control System, the automatic pilot for the AIRBUS is a computer system with high criticality. In order to assess the quality of the software, a number of observations and measurements have been made during the development cycle. A general method of evaluation, the data collected, and some evaluation results are presented. The aims of this analysis are to assess the impact of development constraints on the quality of the product and to evaluate its operational reliability. The results show conditions in which software may be adversely affected by modifications. In particular, they make it possible to appreciate the quality of design, the effectiveness of the verification and validation processes, and the flexibility of the software. The last part gives a tentative example of operational reliability evaluation, taking into consideration the complexity of the functions and the mission profile. Author

FLIGHT TEST OF A RESIDENT BACKUP SOFTWARE SYSTEM

DWAIN A. DEETS, WILTON P. LOCK, and VINCENT A. MEGNA (Draper, Charles Stark Lab., Inc., Cambridge, Mass) /In AGARD, Fault Tolerant Considerations and Methods for Guidance and Control Systems 9 p Jul. 1987 Previously announced as N86-19325

Avail: NTIS HC A07/MF A01

A new fault-tolerant system software concept employing the primary digital computers as host for the backup software portion has been implemented and flight tested in the F-8 digital fly-by-wire airplane. The system was implemented in such a way that essentially no transients occurred in transferring from primary to backup software. This was accomplished without a significant increase in the complexity of the backup software. The primary

digital system was frame synchronized, which provided several advantages in implementing the resident backup software system. Since the time of the flight tests, two other flight vehicle programs have made a commitment to incorporate resident backup software similar in nature to the system described here. Author

OVERVIEW OF AGARD LECTURE SERIES NO. 155: KNOWLEDGE-BASED CONCEPTS AND ARTIFICIAL INTELLIGENCE APPLICATIONS TO GUIDANCE AND CONTROL

RIHCARD PAUL QUINLIVAN /In AGARD, Knowledge Based Concepts and Artificial Intelligence: Applications to Guidance and Control 5 p Aug. 1987

Avail: NTIS HC A07/MF A01

Several lectures dealing with artificial intelligence (AI) applications to guidance and control are reviewed. The use of various forms of AI techniques to help solve problems related to guidance and control is a subject of current interest. Most, if not all, of the practical applications utilize knowledge-based techniques to create so-called 'expert systems'. These systems seem to offer solutions to guidance and control problems that have a large judgment content. Examples include maintenance systems and real-time, decision aiding systems. Author

N88-10808# Analytic Sciences Corp., Reading, Mass.

AI EXPERT SYSTEM TECHNOLOGY ISSUES FOR GUIDANCE AND CONTROL APPLICATIONS

HAROLD L. JONES /In AGARD, Knowledge Based Concepts and Artificial Intelligence: Applications to Guidance and Control 7 p Aug. 1987

Avail: NTIS HC A07/MF A01

A perspective is provided on a set of technical issues, which, if unresolved, could limit the capability and acceptability of expert systems decision making for avionics applications. Examples from ongoing expert system development programs are used to illustrate likely architectures and applications of future intelligent avionics systems. Author

APPLICATION OF KNOWLEDGE-BASED TECHNIQUES TO AIRCRAFT TRAJECTORY GENERATION AND CONTROL

MICHAEL W. BIRD /In AGARD, Knowledge Based Concepts and Artificial Intelligence: Applications to Guidance and Control 12 p Aug. 1987

(Contract F33615-84-C-3626)

Avail: NTIS HC A07/MF A01

A concept that embeds the knowledge-based techniques in a trajectory generation and control system is defined. The control system is called the Unified Trajectory control System (UTCS). The objective of the system is to aid the pilot when operating in the intense threat environment projected for the 1990's. The UTCS has an architecture of independent trajectory generation elements whose operations are integrated by a knowledge-based system.

This artificial intelligence (AI) technique utilizes production rules, an interface engine, and a system of frames for communicating with the trajectory generation elements. Author

LOW COST WINDOWLESS COCKPIT RESEARCH VEHICLE

ROSS E. AILSLIEGER and DAVID T. PALMER (Boeing Military Airplane Co., Wichita, KS) IN: Aerospace Behavioral Engineering Technology Conference, 5th, Long Beach, CA, Oct. 13-16, 1986, Proceedings. Warrendale, PA, Society of Automotive Engineers, Inc., 1986, p. 45-49. (SAE PAPER 861755)

A commercial extension boom type forklift was modified for operation from a remote crew station. Two interchangeable cockpits were fabricated: (1) a generic helicopter cockpit with large windows and (2) a windowless cockpit with three television scenes projected on a panoramic display for outside vision. The vehicle is operated by a side-stick controller and a 'collective' lever. The goal was to develop a low-cost means to conduct research into windowless aircraft operations. The vehicle tests have begun and will be expanded as the cockpit electronics are developed. Author

INVESTIGATION OF THE SUITABILITY OF THE 8FT X 6FT TRANSONIC WIND-TUNNEL FOR AEROACOUSTIC RESEARCH ON PROPELLERS

W. J. G. TREBBLE Jan. 1987 31 p (RAE-TM-AERO-2093; BR102327; ETN-87-90697) Avail: NTIS HC A03/MF A01

The 8ft x 6ft transonic wind tunnel is shown to have a very high noise level, but near field noise signals from a 0.73 m diameter propeller are readily detected above the tunnel background noise at airspeeds up to at least Mach 0.6. Unfortunately the hard walls of the tunnel working chamber produce echoes which interfere with the propeller noise signals. For the facility to be used for aeroacoustic research it is necessary to either develop complex analytical methods using multiple microphone techniques or to line the interior walls of the working chamber with acoustic blankets. THE EFFECT OF VARIATIONS OF COBALT CONTENT ON THE CYCLIC OXIDATION RESISTANCE OF SELECTED NI-BASE SUPERALLOYS

CHARLES A. BARRETT (NASA, Lewis Research Center, Cleveland, OH) IN: Alternate alloying for environmental resistance; Proceedings of the Symposium, New Orleans, LA, Mar. 2-6, 1986. Warrendale, PA, Metallurgical Society, Inc., 1987, p. 211-231. Previously announced in STAR as N86-31702.

Cobalt levels were systematically varied in the Ni-base turbine alloys U-700 (cast), U-700m (PM/HIP), Waspaloy, Mar-M-247, In-738, Nimonic-115, U-720, and SX-R-150. the cobalt levels ranged from 0 wt pct to the nominal commercial content in each alloy. the alloys were tested in cyclic oxidation in static air at 1000, 1100 and 1150 C for 500, 200, and 100 hr, respectively. An oxidation attack parameter, Ka, derived from the specific weight change versus time data was used to evaluate the oxidation behavior of the alloys along with X-ray diffraction analysis of the surface oxides. The alloys tend to form either Cr₂O₃/chromite spinel or Al₂O₃/aluminate spinel depending on the Cr/Al ratio in

the alloys. Alloys with a ratio of 3.5 or higher tend to favor the Cr oxides while those under 3.0 form mostly Al oxides. In general the Al₂O₃/aluminate spinel forming alloys have the better oxidation resistance. Increased cobalt content lowers the scaling resistance of the higher Cr alloys while a 5.0 wt pct Co content is optimum for the Al controlling alloys. The refractory metals, particularly Ta, appear beneficial to both types of oxides, perhaps due to the formation of the omnipresent trirutile Ni(Ta, Nb, Mo, W)₂O₆. Both scales break down as increasing amounts of NiO are formed.

APPLICABILITY OF A DIFFUSION COMBUSTION MODEL TO THE ANALYSIS OF SUPERSONIC TURBULENT REACTING JETS [O PRIMENIMOSTI MODELI DIFFUZIONNOGO GORENIIA K RASCHETU SVERKHZVUKOVYKH TURBULENTNYKH REAGIRUIUSHCHIKH STRUI]

S. I. BARANOVSKII and V. A. PERMINOV Fizika Goreniia i Vzryva (ISSN 0430-6228), vol. 23, May-June 1987, p. 85-88. In Russian. refs

The combustion of a supersonic turbulent jet of hydrogen in air was modeled using boundary layer and diffusion combustion approximations. The model included the effect of concentration pulsations on the mean values of the thermodynamic quantities. The results were compared with measurements obtained in an experiment with a zero ignition delay. It is found that, although an analysis including the effect of pulsations gives better results than a quasi-laminar approach, the final rates of chemical reactions must be considered to correctly model combustion in supersonic flow. V.L.

A88-10872**FLUIDS FOR DEICING AIRCRAFT SURFACES**

Aerospace Engineering (ISSN 0736-2536), vol. 7, Sept. 1987, p. 21-23.

The types of deicing/antiicing fluids and removal procedures currently used are discussed. The removal procedure involves spray applications of aircraft deicing fluids, hot water, or a mixture of both; the procedures for applying the fluids on the aircraft are described. The deicing fluids used in North America are 80-90 percent ethylene glycol and 10-20 percent water corrosion inhibitors, wetting agents, and other glycols. The two types of fluids used by European airlines are categorized by material requirements, freezing points, rheological properties, and antiicing performance characteristics. Type I has a minimum of 80 percent glycol and is used for deicing operations, and type II contains a minimum of 50 percent glycol and is applied in deicing and antiicing operations. The U.S. military utilizes two types of fluids that are basically the same except that the type II fluid contains sodium salt of tolyltriazole. I.F.

COMBUSTION GAS PROPERTIES. III - PREDICTION OF THE THERMODYNAMIC PROPERTIES OF COMBUSTION GASES OF AVIATION AND DIESEL FUELS

OEMER L. GUELDER (National Research Council of Canada, Div. of Mechanical Engineering, Ottawa) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 7 p. refs (ASME PAPER 87-GT-49)

Empirical formulas are presented by means of which the specific heat, mean molecular weight, density, and specific heats ratio of aviation fuel-air and diesel fuel-air systems can be calculated as functions of pressure, temperature, equivalence ratio, and hydrogen-to-carbon atomic ratio of the fuel. Comparisons of the results from the proposed formulas with the results obtained from a chemical equilibrium code show that the mean absolute error in predicted specific heat is 0.8 percent, and that for molecular weight is 0.25 percent. These formulas provide a very fast and easy means of predicting the thermodynamic properties of combustion gases as compared to detailed equilibrium calculations, and they are also valid for a wide range of complex hydrocarbon mixtures

and pure hydrocarbons as well as aviation and diesel fuels.

PACK CEMENTATION COATINGS FOR SUPERALLOYS - A REVIEW OF HISTORY, THEORY, AND PRACTICE

G. W. GOWARD and L. W. CANNON (Turbine Components Corp., Branford, CT) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 6 p. refs (ASME PAPER 87-GT-50)

Nickel- and cobalt-base superalloy blades and vanes in the hot sections of all gas turbines are coated to enhance resistance to hot corrosion. Pack cementation aluminizing is the most widely used coating process. Corrosion resistance of aluminide coatings can be increased by modification with chromium, platinum, or silicon. Chromium diffusion coatings can be used at lower temperatures. Pack cementation and related diffusion coatings serve well for most aircraft engine applications. The trend for industrial and marine engines is more toward the use of overlay coatings because of the greater ease of designing these to meet a wide variety of corrosion conditions.

PREDICTION OF NO AND CO DISTRIBUTION IN GAS TURBINE COMBUSTORS

SHINICHI KAJITA (Kawasaki Heavy Industries, Ltd., Akashi, Japan) and RYUICHI MATUMOTO (Kobe University, Japan) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 6 p. refs (ASME PAPER 87-GT-63)

An experimental and numerical investigation was performed to assess the performance of a procedure for the prediction of NO and CO formed in gas turbine combustors. The experimental procedure consists of measuring the flow, temperature, and pollutant fields in a premixed-gas turbine combustor. The profiles of velocity, temperature, and concentrations of NO and CO within the combustor are predicted by means of a three-dimensional model in which the k-epsilon two-dimensional model is used as a turbulence model, and in which the effect of turbulence on the reaction rate is taken into account by employing the modified eddy-break-up model. Although qualitative agreement between the predicted and measured values was fairly good, quantitative agreement was not obtained.

INVESTIGATION OF HIGH-ALTITUDE IGNITION PERFORMANCE OF SEVERAL CHINESE JET FUELS WITH DIFFERENT PROPERTIES

NENG-KUEN CHEN (Beijing Institute of Aeronautics and Astronautics, People's Republic of China) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 8 p. refs (ASME PAPER 87-GT-178)

Investigation of high-altitude ignition performance of five Chinese jet fuels with different properties has been conducted at a simulated-altitude facility. Jet fuels were tested in a small pilot combustion chamber taken from an existing engine. Test results

show that the lower the fuel density, the better the high-altitude ignition performance. Test results also show that the prevailing theoretical model of spark ignition is reasonable.

APPLICATIONS OF CERAMIC COATING ON THE TURBINE BLADES OF THE AGTJ-100B

KAZUO UCHIDA, AKINORI KOGA, KIYOMI TESHIMA, and MASASHI ARAI (Engineering Research Association for Advanced Gas Turbines, Tokyo, Japan) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 7 p. refs (ASME PAPER 87-GT-190)

The high inlet gas temperature (1673 K) of the AGTJ-100B advanced high-temperature high-pressure turbine (developed for an energy conservation pilot plant in Japan) requires superior thermal insulation; a ceramic thermal barrier coating (TBC) was developed for this purpose. This paper describes a series of tests that evaluated the thermal barrier performance and durability of the TBC. The 0.2-0.3 mm thick coating (including the 0.1-mm-thick bond coat) is made of yttria-stabilized zirconia (ZrO₂-Y₂O₃); the bond coat material is MCrAlY. The blade profile platforms and shrouds are fully covered with the TBC in order not to expose the coating edge to a high temperature and high-speed gas flow. Test results are included.

HYDROGEN IN AIR TRANSPORTATION - FEASIBILITY STUDY FOR ZURICH AIRPORT, SWITZERLAND

H. P. ALDER (Eidgenossisches Institut fuer Reaktorforschung, Wuerenlingen, Switzerland) International Journal of Hydrogen Energy (ISSN 0360-3199), vol. 12, no. 8, 1987, p. 571-585. refs

As a member of the Ad Hoc Executive Group (AHEG) for 'Hydrogen in Air Transportation', the Swiss Group, composed of representatives from industry, Swissair, the utilities and the government, decided to carry out a study on the feasibility of refueling one cargo-aircraft per day with 15 to 30 t of liquid hydrogen (LH₂). For the mission California-Europe-Saudi Arabia, Zurich Airport is well suited as a European base, provided the following option is chosen: electrolytic hydrogen production, liquefaction and storage at one site on the Airport. For the demonstration phase the existing infrastructure can absorb the pilot installations without additional secondary investment. For a commercial operation, however, the economics of the LH₂ production has to be improved and the Airport infrastructure (land, power supply, cooling water, runways) has to be expanded.

COMPOSITE DIRECTIONS AT KAMAN

PAUL F. MALONEY (Kaman Aerospace Corp., Bloomfield, CT) Vertiflite (ISSN 0042-4455), vol. 33, Sept.-Oct. 1987, p. 26-31.

An account is given of the interdisciplinary approach employed by a major composite material aerospace structures manufacturer in the design, analysis, material selection/characterization, tool design, and nondestructive testing of all-composite helicopter main rotor blades. The K747 composite main rotor blade program for the U.S. Army's AH-1 Cobra helicopter, initiated in 1975, has yielded over 2600 such blades to date. Attention is given to the SH-2F/G composite main rotor blade, which employs many features of the AH-1 blade but represents the next generation of computer-aided design, tooling, and fabrication techniques; the use of solid aluminum mandrels and matched steel molds yields a dimensionally exact product with excellent airfoil contour fidelity.

CONFERENCE ON MECHANICAL BEHAVIOR OF SUPERALLOYS, LONDON, ENGLAND, JUNE 10, 11, 1986, SELECTED PAPERS

Conference sponsored by the Royal Society. Materials Science and Technology (ISSN 0267-0836), vol. 3, Sept. 1987, 129 p. For individual items see A88-12627 to A88-12636.

The present conference on the development status of superalloy compositions and processing methods for such applications as gas turbine blades and disks gives attention to the mechanical property requirements and creep behavior of aircraft gas turbine materials, the low cycle fatigue behavior and the fatigue crack growth of superalloy blade materials at elevated temperatures, and novel materials for industrial gas turbines. Also discussed are recent developments in gas turbine disk materials, gas turbine superalloy component service life-estimation methods, fatigue crack propagation in Ni-based superalloys (with attention to the effects of microstructure, load ratio, and temperature), the effects of environment on the crack growth behavior of superalloys under various loading conditions, and high-temperature sheet materials for gas turbine applications.

MECHANICAL PROPERTY REQUIREMENTS FOR AERO GAS TURBINE MATERIALS

M. J. WEAVER (Royal Aircraft Establishment, Farnborough, England) (Royal Society, Conference on Mechanical Behaviour of Superalloys, London, England, June 10, 11, 1986) Materials Science and Technology (ISSN 0267-0836), vol. 3, Sept. 1987, p. 695-700.

The outstanding performance of current military and civil aero gas turbine engines is linked closely to the way in which modern design and manufacturing techniques have become totally integrated with materials designed specifically for operation within the hostile environment of a gas turbine. Advanced titanium alloys are used extensively throughout the compressor and nickel-base superalloys dominate materials application in the turbine. In spite of current achievements, the engine designer is still under severe competitive pressure to improve engine performance still further and this will inevitably lead to even more demanding material requirements. The present paper outlines the continuing trends in engine development and describes the impact these are having on materials technology in general and the mechanical property requirements of nickel-base superalloys in particular.

DEVELOPMENTS IN DISC MATERIALS

F. SZCZERZENIE and G. E. MAURER (Special Metals Corp., New Hartford, NY) (Royal Society, Conference on Mechanical Behaviour of Superalloys, London, England, June 10, 11, 1986) Materials Science and Technology (ISSN 0267-0836), vol. 3, Sept. 1987, p. 733-742. refs

Discs have always been the life- and reliability-limiting components of the gas turbine engine. Progress in disc materials development has been enhanced through the interaction of superalloy materials and metallurgical process development. Disc service environment, property requirements, and physical metallurgy are reviewed. Historically, the introduction of stronger, more heat- and fatigue-resistant alloys has depended upon process developments such as vacuum induction melting, inert gas atomization, and thermomechanical processing. Current developments and future directions are reviewed, including new melting practices for the manufacture of clean metals, the forging of fatigue resistant microstructures and dual property discs.

HIGH-TEMPERATURE SHEET MATERIALS FOR GAS TURBINE APPLICATIONS

B. HICKS (Lucas Aerospace, Ltd., Fabrications Div., Burnley, England) (Royal Society, Conference on Mechanical Behaviour of Superalloys, London, England, June 10, 11, 1986) Materials Science and Technology (ISSN 0267-0836), vol. 3, Sept. 1987, p. 772-781. Research supported by the Ministry of Defence. refs

Aircraft gas turbines contain various sheet metal fabrications, such as combustion chambers, exhaust units, jet pipes, and reheater liners, which operate for long periods under arduous conditions. The properties required in a sheet alloy differ considerably from those of blades and vanes, so that alloys must be developed specifically for the purpose. The performance required of sheet alloys is discussed and current alloys are reviewed in terms of their fabrication, mechanical, and oxidation properties. Some recent developments are described in the field of thermal barrier coatings, dispersion strengthened alloys, and porous laminate materials.

BASIC CONCEPTS FOR BETTER HEAT PROTECTION SYSTEMS

K. FRITSCHER (DFVLR, Institut fuer Werkstoff-Forschung, Cologne, Federal Republic of Germany) Zeitschrift fuer Werkstofftechnik (ISSN 0049-8688), vol. 18, Aug. 1987, p. 265-277. refs

Several mechanisms concerning material degradation at high temperature are briefly reviewed. Oxidation kinetics, oxide structure, diffusion of species during oxidation, oxide scale formation, growth, and adhesion are considered. The hot corrosion mechanism is examined from the chemical and physicochemical standpoints. The improvement of corrosion resistance by superior oxide adhesion is emphasized. Protective measures against each type of degradation are discussed. Thermal barrier coatings (TBCs) for the protection of metal structures subjected to excessive heat and corrosion are addressed, and a viable TBC concept of fully dense ceramic coatings on suitable materials is presented.

DEVELOPMENT AND PRODUCTION OF NEW AND MODIFIED POWDERS FOR SPRAYED COATINGS AND COMPONENTS FOR SAVING IMPORTANT RAW MATERIALS Final Report, Jun. 1985

HEINZ ESCHNAUER, HELMUT MEINHARDT, and REINHOLD LUTZ Bonn, West Germany Bundesministerium fuer Forschung und Technologie Dec. 1986 90 p In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie, West Germany (BMFT-FB-T-86-129; ISSN-0340-7608; ETN-87-90561) Avail: NTIS HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 18.50

Alloy systems for wear and corrosion protection were developed. Tough-hard, high chromium content composites of the type Mi-Cr-B-Si plus hard materials were investigated. These alloys, which are supplied to the users mainly as spray powders, set more stringent requirements on powder production that uses a vacuum-melt/inert-gas atomization process. The same applies to a developed high temperature solder, and alloys of the MCrAlY type. The atomizing plant was modified and improved with a view to the MCrAlY alloy, so that spray powders can be produced which fulfil aircraft industry specifications.

N88-10192# Air Force Wright Aeronautical Labs., Hampton, Va. COST SAVINGS POSSIBLE WITH AIR FORCE CONVERSION TO JP-8 AS ITS PRIMARY FUEL Summary Report, Jan. - Apr. 1987

CHARLES R. MARTEL May 1987 29 p (AD-A183784; AFWAL-TR-87-2037) Avail: NTIS HC A03/MF A01 CSCL 05A

JP-4 has been the primary fuel for the USAF since 1951. However, in 1979 the USAF converted to JP-8 as its primary jet

fuel for its operations in Great Britain. Recently, the North Atlantic Treaty Organization (NATO) began the switch from JP-4 (F40) to JP-8 (F34) as its primary jet fuel. However, JP-4 continues to be the primary USAF jet fuel within the continental United States. The cost and manpower savings possible by converting from JP-4 to JP-8, as the primary jet fuel for the Air Force, are identified and estimated. The much lower volatility of JP-8, as compared to JP-4, accounts for the anticipated savings. For example, aircraft fuel systems must be purged prior to maintenance, and purging aircraft fuel systems that have contained JP-4 can take hours to days. With JP-8 purging may not even be necessary under most ambient temperatures. Another major savings is the reduced evaporation of JP-8, as compared to the more volatile JP-4. Finally, reduced fatalities and casualty losses resulting from ground and flight accidents are estimated. GRA

HIGH TEMPERATURE METAL MATRIX COMPOSITES FOR FUTURE AEROSPACE SYSTEMS

JOSEPH R. STEPHENS Oct. 1987 18 p Presented at the ASM International Composite Session, Cincinnati, Ohio, 13-15 Oct. 1987

(NASA-TM-100212; E-3821; NAS 1.15:100212) Avail: NTIS HC A03/MF A01 CSCL 11F

Research was conducted on metal matrix composites and intermetallic matrix composites to understand their behavior under anticipated future operating conditions envisioned for aerospace power and propulsion systems of the 21st century. Extremes in environmental conditions, high temperature, long operating lives, and cyclic conditions dictate that the test evaluations not only include laboratory testing, but simulated flight conditions. The various processing techniques employed to fabricate composites are discussed along with the basic research underway to understand the behavior of high temperature composites, and the relationship of this research to future aerospace systems.

CONSTITUTIVE MODELING OF SUPERALLOY SINGLE CRYSTALS WITH VERIFICATION TESTING

ERIC JORDAN and KEVIN P. WALKER (Engineering Science Software, Inc., Smithfield, R.I.) In NASA. Lewis Research Center, Turbine Engine Hot Section Technology, 1985 p 277-286 Oct. 1985

(Contract NAG3-512)

Avail: NTIS HC A19/MF A01 CSCL 11F

The goal is the development of constitutive equations to describe the elevated temperature stress-strain behavior of single crystal turbine blade alloys. The program includes both the development of a suitable model and verification of the model through elevated temperature-torsion testing. A constitutive model is derived from postulated constitutive behavior on individual crystallographic slip systems. The behavior of the entire single crystal is then arrived at by summing up the slip on all the operative crystallographic slip systems. This type of formulation has a number of important advantages, including the prediction orientation dependence and the ability to directly represent the constitutive behavior in terms which metallurgists use in describing the micromechanisms. Here, the model is briefly described, followed by the experimental set-up and some experimental findings to date. Author

COUNTERROTATING DIFFERENTIAL CYLINDRICAL ROLLER BEARING DEVELOPMENT

BILL CRECELIUS (General Electric Co., Cincinnati, OH) AIAA, SAE, ASME, and ASEE, Joint Propulsion Conference, 23rd, San Diego, CA, June 29-July 2, 1987. 9 p. refs (AIAA PAPER 87-1843)

Advances in turbofan engine design have brought on the need for counterrotating main shaft roller bearings to operate to speeds greater than 3.7 million DN. To begin assimilating a data base, four bearings were tested for 25 hours each - one with round rings, a soft trilobe, a hard trilobe, and a hard bilobe. Internally, all bearings functioned equally well. However, severe fretting and ring turning developed at the inner ring shaft interface with all out-of-round bearings. Differential sumps pose some unique problems, but no problem could be linked to counterrotation. Computer program CYLFLEX was enhanced with lubrication and friction calculations to treat counterrotating roller bearings. Load distribution, change in clearance, component kinematics, cage slip, and frictional heat rate were all addressed. Author

MULTIGRID SOLUTION OF THE EULER EQUATIONS ON UNSTRUCTURED AND ADAPTIVE MESHES

D. MAVRIPLIS and A. JAMESON (Princeton University, NJ) University of Colorado and USAF, Copper Mountain Conference on Multigrid Methods, 3rd, Copper Mountain, CO, Apr. 6-10, 1987, Paper. 23 p. refs

A multigrid algorithm for application to a sequence of completely unstructured and unrelated meshes is discussed, and solutions for the supersonic flow over a two-element airfoil system are presented. A Delaunay algorithm (Weatherill, 1985), in which the distribution of mesh points is either determined by conformal mapping techniques or by adaptive refinement of the previous coarser mesh, is used to generate the meshes. Although the finest mesh used in the adaptive refinement sequence contains about $1/4$ as many mesh points as that used in the global refinement sequence, the calculated force coefficients for both solutions are found to compare closely. THREE-DIMENSIONAL FLOW IN A ROTOR - A STRICTLY THREE-DIMENSIONAL CALCULATION OF FLOWS IN TURBOMACHINES USING THE S1-S2 METHOD [ECOLEMENT TRIDIMENSIONNEL DANS UNE ROUE - CALCUL EFFECTIF-TRIDIMENSIONNEL DES ECOULEMENTS DANS LES TURBOMACHINES PAR LA METHODE S1-S2]

D. BUISINE and P. MICHEAU (Lille I, Universite, Villeneuve-d'Ascq, France) Journal de Mecanique Theorique et Appliquee (ISSN 0750-7240), vol. 6, no. 4, 1987, p. 525-546. In French. refs

The restrictions which are traditionally imposed to overcome the instability of the S1-S2 method are investigated, and a strictly three-dimensional technique for the coupling of the S1-S2 method is proposed which uses only the local equations and the boundary conditions. The technique takes into account important processes in the design of blade shapes, and it is demonstrated with the examples of an axial compressor and a rotor with a helical blade shape. The present method is found to accurately model the interactions between processes including the secondary effects, the local radial equilibrium, and the downstream equilibrium between the jets, in addition to being able to predict the appearance of processes which degrade rotor performance. USE OF A LIQUID-CRYSTAL AND HEATER-ELEMENT COMPOSITE FOR QUANTITATIVE, HIGH-RESOLUTION HEAT-TRANSFER COEFFICIENTS ON A TURBINE AIRFOIL INCLUDING TURBULENCE AND SURFACE-ROUGHNESS EFFECTS

S. A. HIPPENSTEELE, L. M. RUSSELL, and F. J. TORRES (NASA, Lewis Research Center, Cleveland, OH) IN: Pressure temperature measurements. New York, American Society of Mechanical Engineers, 1987, p. 105-120. Previously announced in STAR as N87-22181. refs

Local heat transfer coefficients were measured along the midchord of a three-times-size turbine vane airfoil in a static cascade operated at room temperature over a range of Reynolds numbers. The test surface consisted of a composite of commercially available materials: a Mylar sheet with a layer of cholestric liquid crystals, which change color with temperature,

and a heater made of a polyester sheet coated with vapor-deposited gold, which produces uniform heat flux. After the initial selection and calibration of the composite sheet, accurate, quantitative, and continuous heat transfer coefficients were mapped over the airfoil surface. Tests were conducted at two free-stream turbulence intensities: 0.6 percent, which is typical of wind tunnels; and 10 percent, which is typical of real engine conditions. In addition to a smooth airfoil, the effects of local leading-edge sand roughness were also examined for a value greater than the critical roughness. The local heat transfer coefficients are presented for both free-stream turbulence intensities for inlet Reynolds numbers from 1.20 to 5.55×10 to the 5th power. Comparisons are also made with analytical values of heat transfer coefficients obtained from the STAN5 boundary layer code. Author

EXPERIMENTS ON SPRAY INTERACTIONS IN THE WAKE OF A BLUFF BODY

R. C. RUDOFF, M. J. HOUSER, and W. D. BACHALO (Aerometrics, Inc., Mountain View, CA) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 9 p. refs

(Contract NAS3-24844)

(ASME PAPER 87-GT-48)

The dynamics of spray drop interaction within the turbulent wake of a bluff body were investigated using the Aerometrics Phase Doppler Particle Analyzer that determines both drop size and velocity. Detailed measurements obtained included spray drop size, axial and radial velocity, angle of trajectory, and size-velocity correlations. The gas-phase flow field was also ascertained via the behavior of the smallest drops. Results showed dramatic differences in drop behavior when interacting with turbulence for the various size classes. Small drops were recirculated in a pair of toroidal vortices located behind the bluff body, whereas the larger drops followed the general direction of the spray cone angle.

The spray field interaction illustrated by these data casts some doubt on attempts to describe sprays via simple integral quantities such as the Sauter mean diameter. Author

SEALING OF A SHROUDED ROTOR-STATOR SYSTEM WITH PRE-SWIRL COOLANT

Z. B. EL-OUN, P. H. NELLER, and A. B. TURNER (Sussex, University, Brighton, England) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 11 p. Research supported by SERC, Rolls-Royce PLC, and GEC-Ruston Gas Turbine PLC. refs (ASME PAPER 87-GT-72)

Experimental results for a modeled gas turbine rotor-stator system using both preswirl blade coolant and radially outward flowing disc coolant are presented. Although the preswirl coolant flow is found to have little effect on the pressure distribution below the preswirl nozzles, it is shown that considerable contamination of the preswirl coolant by the frictionally heated disc coolant can occur. A clear pressure inversion effect was found when coolant was provided by the preswirl nozzles alone, while the pressure under the rim seal increased with increasing rotational speed. Blade coolant flow increases the sealing flow requirement, except at the lowest flow rates. R.R.

PREDICTION OF TURBULENT SOURCE FLOW BETWEEN COROTATING DISKS WITH AN ANISOTROPIC TWO-EQUATION TURBULENCE MODEL

SIAMACK A. SHIRAZI and C. RANDALL TRUMAN (New Mexico, University, Albuquerque) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 8 p. Research supported by Sandia National Laboratories and University of New Mexico. refs (ASME PAPER 87-GT-73)

An anisotropic form of a low-Reynolds-number two-equation turbulence model has been implemented in a numerical solution for incompressible turbulent flow between corotating parallel disks. Transport equations for turbulent kinetic energy and dissipation rate were solved simultaneously with the governing equations for the mean-flow variables. Comparisons with earlier mixing-length predictions and with measurements are presented. Good agreement between the present predictions and the measurements of velocity components and turbulent kinetic energy was obtained. The low-Reynolds-number two-equation model was found to adequately model the near-wall region as well as the effects of rotation and streamline divergence which required ad hoc assumptions in the mixing-length model. Author

NUMERICAL PREDICTION OF TURBULENT FLOW IN ROTATING CAVITIES

A. P. MORSE (Sussex, University, Brighton, England) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 13 p. refs (ASME PAPER 87-GT-74)

Predictions of the isothermal, incompressible flow in the cavity formed between two corotating plane discs and a peripheral shroud have been obtained using an elliptic calculation procedure and a low-turbulence Reynolds number k -epsilon model for the estimation of turbulent transport. Both radial inflow and outflow are investigated for a wide range of flow conditions involving rotational Reynolds number up to one million. Although predictive accuracy is generally good, the computed flow in the Ekman layers for radial outflow often displays a retarded spreading rate and a tendency to laminarize under conditions which are known from experiment to produce turbulent flow. Author

DEVELOPMENT OF CERAMIC HOT SECTION COMPONENTS FOR AGT 100 GAS TURBINE

D. A. TURNER and R. L. HOLTMAN (General Motors Corp., Allison Gas Turbine Div., Indianapolis, IN) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 6 p. (ASME PAPER 87-GT-79)

The development of the AGT 100 gasifier turbine components in structural ceramic materials is described. Development is defined as the complete and iterative cycle from design, analysis, test, and design refinement culminating in successful demonstration of the design requirements. The components are analyzed by a linear elastic probabilistic approach, which involves finite element simulation of the component combined with a Weibull characterization of the brittle ceramic material strength distribution, to calculate a probability of survival for the component in the operating environment. Component test failure investigation has resulted in design modifications, and an improvement in component reliability has been demonstrated. Author

EFFECT OF RIB ANGLE ON LOCAL HEAT/MASS TRANSFER DISTRIBUTION IN A TWO-PASS RIB-ROUGHENED CHANNEL

P. R. CHANDRA, J. C. HAN, and S. C. LAU (Texas A & M University, College Station) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 9 p. refs (Contract NAS3-24227) (ASME PAPER 87-GT-94)

The naphthalene sublimation technique is used to investigate the heat transfer characteristics of turbulent air flow in a two-pass channel. A test section that resembles the internal cooling passages of gas turbine airfoils is employed. The local Sherwood numbers on the ribbed walls were found to be 1.5-6.5 times those for a fully developed flow in a smooth square duct. Depending on the rib angle-of-attack and the Reynolds number, the average ribbed-wall Sherwood numbers were 2.5-3.5 times higher than the fully developed values. R.R.

PROCEDURES FOR DETERMINING SURFACE HEAT FLUX USING THIN FILM GAUGES ON A COATED METAL MODEL IN A TRANSIENT TEST FACILITY

J. E. DOORLY (Oxford University, England) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 10 p. Research supported by Rolls-Royce, PLC and Royal Aircraft Establishment. refs (ASME PAPER 87-GT-95)

The paper describes how thin film surface heat flux gauges may be used to measure surface heat transfer rate to enamel-coated metal turbine blades. Flexible methods, which are also computationally efficient, for obtaining the heat transfer rate are described. Experimental results using the new coated metal turbine blades and processing techniques in a stationary transient cascade facility are given and are shown to agree well with results using the existing method for gauges on single-layer substrate blades. The application of the gauges for measuring highly unsteady heat transfer is also discussed. Author

A QUALITATIVE METHOD FOR DETERMINING THE TEMPERATURE PATTERN OF RUN GAS TURBINE BLADES

G. MCQUIGGAN and W. LINKERT (Westinghouse Canada, Inc., Turbine and Generator Div., Hamilton) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 5 p. refs (ASME PAPER 87-GT-102)

The paper proposes a quick and inexpensive qualitative method for determining the temperature pattern of run gas turbine blades (made from IN738 superalloy) that operate in the region of 815 C to 900 C. The method is based on measuring magnetism that develops in normally nonmagnetic materials upon exposure to high

temperatures. The magnetism induced in these alloys is thought to be the result of changes in the crystal lattice caused by operation of the alloy in a corrosive environment at elevated temperature. The development of a quantitative relationship might not be possible because of the interactive effects of temperature, environment, and time. I.S.

A88-11040#**THERMODYNAMICS AND PERFORMANCE PROJECTIONS FOR INTERCOOLED/REHEAT/RECUPERATED GAS TURBINE SYSTEMS**

MAHER A. EL-MASRI (MIT, Cambridge, MA) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 8 p. refs
(ASME PAPER 87-GT-108)

Two methods for improving the performance of intercooled/recuperated (ICR) systems are assessed. Reheat ICR (RICR) cycles are compared with nonreheat ICR cycles for conservative and advanced components. The ICR cycles are for two-shaft engines and the RICR for two- and three-shaft engines. It is observed that for both conservative and advanced turbine component constraints without thermal barrier coating, the RICR cycle exceeds the ICR cycle by only 0.3 points and 6 percent in specific output. Whether reheat is preferable to a simple cycle turbine inlet temperature (TIT) depends on the form of the temperature difference and the additional loss induced by the reheat itself, and the feasibility of applying reheat depends on the constraints and design tradeoffs. Cooling flow rates as a function of TIT for ICR and RICR cycles and the use of water injection to improve ICR cycle performance are examined. I.F.

A88-11041#**EFFECTS OF CHANNEL ASPECT RATIO ON HEAT TRANSFER IN RECTANGULAR PASSAGE SHARP 180-DEG TURNS**

C. S. FAN and D. E. METZGER (Arizona State University, Tempe) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 7 p. refs
(ASME PAPER 87-GT-113)

Measured Nusselt numbers are presented for forced convection within and around sharp 180-deg turns in smooth channels of rectangular cross section. The turn geometry is characterized by channel height, inlet and outlet channel widths, and clearance at the tip of the turn. Twenty-seven different geometry parameter combinations were tested in the present study, extending previous work to two additional values of channel height and providing an assessment of the independent effect of channel aspect ratio for a wide variety of combinations of the other geometry parameters. Separately determined top wall, bottom wall, and side wall Nusselt numbers are presented individually along with azimuthal averages. In general, increasing channel aspect ratio results in smaller azimuthal heat transfer variations and increased overall channel heat transfer. Author

ABDEL AZIM A. F. EL-SAYED (Zagazig University, Egypt) and A. BROWN (Royal Military College of Science, Shrivenham, England) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 8 p. refs
(ASME PAPER 87-GT-127)

In this article an iterative procedure is presented for estimating erosion in axial gas turbine blades. The procedure is applied to a two stage turbine and the erosion is estimated for a 12,000 hour engine running time. The effect of the erosion on engine performance is estimated through changes in pressure coefficient distribution around a blade section. Author

A88-11055#**A MODEL TO DETERMINE THE BEHAVIOUR OF A PRESSURE MEASUREMENT EQUIPMENT DURING NON-STATIC OPERATIONS OF GASTURBINE ENGINES**

K.-U. LEMMER and J. HASS (Hamburg, Universitaet der Bundeswehr, Federal Republic of Germany) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 10 p. refs
(ASME PAPER 87-GT-128)

A mathematical model was developed to describe the behavior of a pressure measurement equipment of gas-turbine engines during nonstatic operations. The model determines the influence of the components of the measuring chain: a pressure measuring transducer, a hose pipe, and a pressure probe. It performs back calculations from the measured pressure signals to the real measuring value. The model was verified by pressure measurements with a calibrating device. The pressure measurements during the transition between different operating points of a gas-turbine engine and the adjustment of these pressure values with the help of the measuring-chain model are described. C. A. FUCINARI, J. K. VALLANCE, and C. J. RAHNKE (Ford Motor Co., Dearborn, MI) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 10 p. DOE-supported research.
(Contract DEN3-167)
(ASME PAPER 87-GT-173)

The design and development of the regenerator seals used in the AGT101 gas turbine engine are described in this paper. The all ceramic AGT101 gas turbine engine was designed for 100 hp at 5:1 pressure ratio with 2500F(1371C) turbine inlet temperature. Six distinct phases of seal design were investigated experimentally and analytically to develop the final design. Static and dynamic test rig results obtained during the seal development program are presented. In addition, analytical techniques are described. The program objectives of reduced seal leakage, without additional diaphragm cooling, to 3.6 percent of total engine airflow and higher

seal operating temperature resulting from the 2000F (1093C) inlet exhaust gas temperature were met. Author

LABYRINTH SEAL FLOW MEASUREMENT BY TRACER GAS INJECTION

WILLIAM F. MCGREEHAN, FRED G. HAASER, and LAURENCE T. SHERWOOD (General Electric Co., Cincinnati, OH) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 6 p. Research supported by the General Electric Co. refs (ASME PAPER 87-GT-187)

A practical system for flow measurement in rotating seals using the injection and sampling of a tracer gas is presented. Carbon dioxide or helium is injected as a tracer into a labyrinth seal at a controlled rate and gas samples are extracted downstream for concentration measurement. Test results from a rotating labyrinth seal rig were obtained over a range of seal pressure ratios and rotor speeds in order to determine the conditions which assure optimum tracer gas mixing. Seal leakage rates calculated by tracer gas concentration are compared to venturi flow measurements. Author

FILM COOLING OF A TURBINE BLADE WITH INJECTION THROUGH TWO ROWS OF HOLES IN THE NEAR-ENDWALL REGION

R. J. GOLDSTEIN and P. H. CHEN (Minnesota, University, Minneapolis) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 7 p. USAF-supported research. refs (ASME PAPER 87-GT-196; ASME PAPER 87-GT-196)

Measurements of film cooling on a simulated turbine blade are conducted using a mass transfer technique. Under the influence of the endwall, dramatic changes of film cooling performance occur on the convex surface of the blade as compared to the region where the flow is two-dimensional. The result is a triangular region, where coolant is swept away from the surface by the three dimensional vortex driven flow present between adjacent blades. In order to predict the area of this unprotected region, the influences of several parameters including density ratio, blowing rate and number of rows of injection holes are studied. The presence of the endwall affects the film cooling performance on the concave surface only slightly. Author

HEAT TRANSFER TO ARRAYS OF IMPINGING JETS IN A CROSSFLOW

B. R. HOLLWORTH (Clarkson University, Potsdam, NY) and G. H. COLE (Idaho National Engineering Laboratories, Idaho Falls) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 9 p. refs (ASME PAPER 87-GT-198)

Convective heat transfer measurements for staggered arrays of round turbulent air jets impinging upon a heated flat surface were obtained in the mean jet Reynolds number range of 2500-25,000. Streamwise variations in spanwise-averaged heat transfer were found using microfoil heat flux sensors, and heat transfer profiles were found to be periodic, with a peak corresponding to each spanwise row of holes. Peaks were displaced in the streamwise direction by the crossflow, with the largest deflections being exhibited by those nearest the exhaust end of the channel. Array-averaged heat transfer coefficients obtained by numerically averaging the local measurements were found to agree well with previous results. R.R.

COMPARISON OF PREDICTED AND MEASURED VELOCITIES IN A COMPRESSOR DISK DRUM MODEL

D. G. ALBERGA, G. E. STEPHENS (Pratt and Whitney, East Hartford, CT), and B. V. JOHNSON (United Technologies Research Center, East Hartford, CT) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 6 p. Research supported by Pratt and Whitney. refs (ASME PAPER 87-GT-208)

LDV measurements of tangential velocity distributions in the bleed and the trapped cavities of an 11-cavity compressor drum model were obtained at disk tangential Reynolds numbers of about 2×10 to the 6th and compared with predicted values. Experimental results show the tangential velocity profiles in the bleed cavity to vary from near-solid-body at low flow rates to near-free-vortex at the highest flow rates. A decrease in tangential velocity strength in the trapped flow cavities with distance from the bleed cavity was also noted. The flow in the bleed and trapped cavities were modeled using an analysis coupling the flow in a core region with the flow in the disk boundary layers. The analytical model is shown to accurately predict the tangential velocity distribution, and hence the pressure drop, for a range of flow conditions and cavity locations. R.R.

NEUTRON AND POSITRON TECHNIQUES FOR FLUID TRANSFER SYSTEM ANALYSIS AND REMOTE TEMPERATURE AND STRESS MEASUREMENT

P. A. E. STEWART (Rolls-Royce, PLC, Advanced Projects Dept., Bristol, England) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 15 p. Research supported by the Ministry of Defence (Procurement Executive).

(ASME PAPER 87-GT-219)

Present and projected applications of penetrating radiation techniques to gas turbine research and development are considered. Approaches discussed include the visualization and measurement of metal component movement using high energy X-rays, the measurement of metal temperatures using epithermal neutrons, the measurement of metal stresses using thermal neutron diffraction, and the visualization and measurement of oil and fuel systems using either cold neutron radiography or emitting isotope tomography. By selecting the radiation appropriate to the problem, the desired data can be probed for and obtained through imaging or signal acquisition, and the necessary information can then be extracted with digital image processing or knowledge based image manipulation and pattern recognition.

EFFECT OF FLUID INERTIA ON THE PERFORMANCE OF SQUEEZE FILM DAMPER SUPPORTED ROTORS

L. A. SAN ANDRES and JOHN M. VANCE (Texas A & M University, College Station) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 12 p. refs

(ASME PAPER 87-GT-220)

The effect of fluid inertia on the synchronous steady-state operation of a centrally preloaded single mass flexible rotor supported in squeeze film bearing dampers is examined theoretically. For a model representative of some aircraft engine applications, frequency response curves are presented exhibiting the effect of fluid inertia on rotor excursion amplitudes and imbalance transmissibilities for both pressurized and unpressurized short open ended squeeze film damper supports. It is shown that a significant reduction in amplitude response and transmitted force is possible for dampers operating at moderately large squeeze film Reynolds numbers. Furthermore, for unpressurized dampers the possibilities of bi-stable operation and jump phenomena are shown to be reduced and virtually disappear at sufficiently large operating Reynolds numbers.

A STUDY OF THE EFFECTS OF THERMAL BARRIER COATING SURFACE ROUGHNESS ON THE BOUNDARY LAYER CHARACTERISTICS OF GAS-TURBINE AEROFOILS

R. M. WATT, J. L. ALLEN (Oxford University, England), N. C. BAINES (Imperial College of Science and Technology, London, England), J. P. SIMONS, and M. GEORGE (Rolls-Royce, PLC, Bristol, England) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987. 8 p. SERC-supported research. refs

(ASME PAPER 87-GT-223)

The effect of thermal barrier coating surface roughness on the aerodynamic performance of gas-turbine aerofoils has been investigated for the case of a profile typical of current first-stage nozzle guide vane design. Cascade tests indicate a potential for significant extra loss, depending on Reynolds number, due to thermal barrier coating in its 'as-sprayed' state. In this situation polishing coated vanes is shown to be largely effective in restoring their performance. The measurements also suggest a critical low Reynolds number below which the range of roughness tested has no effect on cascade efficiency. Transition detection involved a novel use of thin-film anemometers painted and fired onto the TBC surfaces.

NDE AT TWELVE O'CLOCK HIGH

BERNHARD R. TITTMANN (Rockwell International Science Center, Thousand Oaks, CA) Mechanical Engineering (ISSN 0025-6501), vol. 109, Sept. 1987, p. 72-74.

The role of NDE in the evaluation of materials, in particular materials for aircraft components, is examined. Computer-based ultrasonic systems and real-time radiography are applicable for analyzing material properties. The development of NDE methods, such as fiber-optic borescopes, and X-ray, dye-penetrant, and magnetic techniques for testing difficult to reach places (welds) is being researched. The need for laser-based ultrasonic techniques for in-process and in-service control and monitoring of materials is discussed. Consideration is given to noncontacting acoustooptical process monitoring and the use of heat sources, such as laser beams, to generate thermal waves on the surface of materials.

FORCE COMMUTATED DIRECT FREQUENCY CHANGERS FOR AEROSPACE POWER APPLICATIONS

Y. KIM and M. EHSANI (Texas A & M University, College Station) IN: IECEC '87; Proceedings of the Twenty-second Intersociety Energy Conversion Engineering Conference, Philadelphia, PA, Aug. 10-14, 1987. Volume 1. New York, American Institute of Aeronautics and Astronautics, 1987, p. 325-330. refs

This paper describes a new VSCF system whose prime power source is a permanent magnet generator. The terminal voltage of permanent magnet generator is not controllable since the excitation is constant and the output frequency varies proportionally to the engine speed. Forced turn-off frequency changers are employed as the interface between permanent magnet generator and constant frequency supply. Control laws of the VSCF system, which reduce power ratings of the system and increase efficiency in the VSCF, are established. Finally, microprocessor-based control techniques, which provide the input power factor control as well as voltage and frequency control, are described.

A88-12294#**SIMILARITY OF EJECTOR WALL-PRESSURE DISTRIBUTIONS**

M. S. CHANDRASEKHARA, A. KROTHAPALLI (Florida State University, Tallahassee), and D. BAGANOFF (Stanford University, CA) AIAA Journal (ISSN 0001-1452), vol. 25, Sept. 1987, p. 1266-1268.

(Contract F49620-79-C-0189)

The wall static pressure distribution of a multiple, underexpanded jet ejector of the kind employed in thrust augmentation is presently found to scale well with average throat static pressures. This effect is ascribed to the absence of the well-defined acoustic interaction that is generally observed in the single underexpanded jet. The self-similarity obtained only holds, however, for short nozzle-to-throat distances; at greater distances, a clear breakdown is noted. O.C.

A88-12657**OPTICAL SYSTEMS FOR GAS TURBINE ENGINES**

MARK WRIGLEY (Negretti Aviation, Croydon, England) IN: Contemporary optical instrument design, fabrication, and testing; Proceedings of the Meeting, Innsbruck, Austria, Apr. 17, 18, 1986. Bellingham, WA, Society of Photo-Optical Instrumentation Engineers, 1986, p. 231-237.

The design and fabrication of a turbine-blade pyrometer transducer for in situ measurements of blade temperature in operating gas-turbine engines are described and illustrated with diagrams, drawings, graphs, and photographs. Consideration is given to the primary components (optical probe, fiber-optic cable, and electronics), the operating environment (extreme temperatures and pressures, vibration, EMI, and liquids), the design specifications, and specific fabrication techniques. It is pointed out that electrooptic transducers of this type reduce the measurement error to + or - 10 C, and that the same sensors can be used to measure blade-tip clearance and shaft speed or to detect flame-out. T.K.

A88-12697**SELF-ADJUSTING FLIGHT ELECTRONICS (SAFE)**

THOMAS P. CAUDELL (Hughes Artificial Intelligence Center, Calabasas, CA) and I. DAVID LEVY (Hughes Aircraft Co., Electro-Optical and Data Systems Group, El Segundo, CA) IN: Infrared detectors, sensors, and focal plane arrays; Proceedings of the Meeting, San Diego, CA, Aug. 21, 22, 1986. Bellingham, WA, Society of Photo-Optical Instrumentation Engineers, 1986, p. 145-150. USAF-supported research.

The design and performance of SAFExpert, an expert-system program developed (as part of the SAFE program) to adjust the clock levels and biases of avionic CCD detector arrays, are described. The basic adjustment problem is defined; the expert-system approach (combining basic knowledge of the device physics and engineering experience) is explained; and the process flow and operation of SAFExpert are presented in diagrams and characterized in detail. In test optimizations involving three different CCD arrays preset to three different sets of (degraded-performance) clock/bias levels, SAFExpert achieved 50-percent better bucket capacity in about 8 min than a human expert obtained (by manual tweaking) in 30-60 min. The applicability of SAFExpert to other parameter-adjustment and optimization problems is discussed. T.K.

A88-12725* Missouri Univ., Columbia.**DEVELOPMENT AND IMPLEMENTATION OF AN AERODYNAMIC HOLOGRAPHIC INTERFEROMETRY SYSTEM**

JOHN B. MILES (Missouri-Columbia, University, Columbia), STEPHEN E. DUNAGAN, and JAMES L. BROWN (NASA, Ames Research Center, Moffett Field, CA) IN: High speed photography, videography, and photonics IV; Proceedings of the Meeting, San Diego, CA, Aug. 19, 20, 1986. Bellingham, WA, Society of Photo-Optical Instrumentation Engineers, 1986, p. 186-198. refs

An aerodynamic holographic interferometry system has been developed and adapted for use with an existing supersonic wind tunnel. The basis for the system is briefly discussed, and the flow investigation for which the system was developed is outlined. The

system is described, including detailed equipment schematics and cost figures. Some details and guidance are given with regard to experience in reducing the interferometry fringe data via the Abel transformation to obtain density fields and, in turn, velocity fields. Finally, representative results are shown together with complementary laser velocimetry measurements and Navier-Stokes computations. C.D.

A88-12732**VIDEO DATA LINK PROVIDES TELEVISION PICTURES IN NEAR REAL TIME VIA TACTICAL RADIO AND SATELLITE CHANNELS**

RICHARD V. HARTMAN (Singer Co., Dalmo Victor Div., Belmont, CA) IN: Airborne reconnaissance X; Proceedings of the Meeting, San Diego, CA, Aug. 19, 20, 1986. Bellingham, WA, Society of Photo-Optical Instrumentation Engineers, 1987, p. 21-25.

Advances in sophisticated algorithms and parallel VLSI processing have resulted in the capability for near real-time transmission of television pictures (optical and FLIR) via existing telephone lines, tactical radios, and military satellite channels. Concepts have been field-demonstrated with production-ready engineering development models using transform compression techniques. Preliminary design has been completed for packaging an existing command post version into a 20-pound enclosure for use on jeeps, backpacks, RPVs, helicopters, and reconnaissance aircraft. The system will also have a built-in error correction code unit, allowing operation via communications media exhibiting a bit error rate of 0.01 or better. Author

R. W. RUSSELL, G. S. ROSSANO, D. K. LYNCH, G. T. COLON-BONET, J. A. HACKWELL (Aerospace Corp., Space Sciences Laboratory, Los Angeles, CA) et al. IN: Infrared technology XII; Proceedings of the Meeting, San Diego, CA, Aug. 19, 20, 1986. Bellingham, WA, Society of Photo-Optical Instrumentation Engineers, 1986, p. 88-98.

(Contract NAS2-12155)

NASA's Kuiper Airborne Observatory, which is a C-141 transport aircraft equipped with a 90-cm, all-reflective altazimuth telescope, has been engaged in the Kuiper Infrared Technology Experiment. Attention is presently given to the Experiment's flight series for state-of-the-art two-dimensional, 500-element arrays that use either blocked impurity band or bulk silicon devices. The switched FET readout scheme used on the three arrays flown thus far yields exceptionally low crosstalk. System sensitivities are found to be sufficient for the detection of both pointlike and extended sources; several of each type have been used in staring and scanning experiments. O.C.

A88-12840**AN UNCOOLED LINESCAN THERMAL IMAGER FOR GROUND AND AIRBORNE USE**

T. J. LIDDICOAT, M. V. MANSI (Plessey Research Roke Manor, Ltd., England), D. E. BURGESS, and P. A. MANNING (Royal Signals and Radar Establishment, Malvern, England) IN: Infrared technology XII; Proceedings of the Meeting, San Diego, CA, Aug. 19, 20, 1986. Bellingham, WA, Society of Photo-Optical Instrumentation Engineers, 1986, p. 108-114. Research supported by the Ministry of Defence and Plessey Research and Technology, Ltd.

An account is given of the design features and performance capabilities of pyroelectric IR sensors employing 64-element linear detector arrays, germanium lenses, and a chopper for the modulation of the incoming radiation. In one of the two systems presented, the peak value of the signal is read from the detector with the chopper in 'open' position and displayed in the form of a grey-scale picture; in the second system, the difference between the signals obtained with the chopper in 'open' and 'closed' positions is determined and displayed as a grey-scaled image. The sensors may be used in a panned mode to give large-area surveillance, as well as in a staring mode to furnish image

information in virtue of the motion of the target. They may also be used in an aircraft-mounted linescan mode. O.C.

A88-12843**A COMPACT HIGH PERFORMANCE THERMAL IMAGER**

A. H. LETTINGTON (Royal Signals and Radar Establishment, Malvern, England) and W. T. MOORE (Rank Pullin Controls, Ltd., Laughton, England) IN: Infrared technology XII; Proceedings of the Meeting, San Diego, CA, Aug. 19, 20, 1986. Bellingham, WA, Society of Photo-Optical Instrumentation Engineers, 1986, p. 146-151.

A compact, low-cost, high-performance thermal imager based on a novel coaxial scanning technique is presented. Design requirements for this imager configuration encompass the avoidance of vignetting and pupil wander in the scanning elements and objective lenses, as well as the maximization of detector cold shielding. The requirements are met by the use of SPRITE IR detectors, and the use of coincident pupils (as in the coaxial scanner). Attention is given to representative military applications for the thermal imager, including RPVs, airborne pods, helicopters, and land-based sights. O.C.

A88-12903**THIN-FILM TEMPERATURE SENSORS DEPOSITED BY RADIO FREQUENCY CATHODIC SPUTTERING**

J. C. GODEFROY, C. GAGEANT, D. FRANCOIS, and M. PORTAT (ONERA, Chatillon-sous-Bagneux, France) Journal of Vacuum Science and Technology A (ISSN 0734-2101), vol. 5, Sept.-Oct. 1987, p. 2917-2923. DRET-supported research. refs

In order to gain better knowledge of the heat exchanges occurring in aircraft turbines, ONERA is presently developing thin-film heat sensors capable of operating up to a maximum temperature of 1100 C. These high-temperature sensors are surface thermometers and fluxmeters of the gradient type. They consist of metal films forming thermocouples and insulating films such as alumina or zircon stabilized by yttrium oxide. These layers are deposited by RF cathodic sputtering on substrates such as IN100, DS200, and CMSX2 superalloys which are either aluminized or coated with an NiCoCrAlY alloy. The present state of development of the thermometers is described as well as the first results obtained. Author

A88-12949**ELASTIC BUCKLING OF INTERNALLY PRESSURIZED CYLINDER-BULKHEAD COMBINATIONS**

G. D. GALLETLY and J. BLACHUT (Liverpool, University, England) Institution of Mechanical Engineers, Proceedings, Part C - Mechanical Engineering Science (ISSN 0263-7154), vol. 201, no. C4, 1987, p. 259-262. refs

Unstiffened spherical caps attached to unstiffened cylindrical shells by means of circumferential stiffening rings are considered. The loading is by uniform internal pressure, and the object of the analysis is to determine if elastic bifurcation buckling can occur, and, if so, where the buckles will be located. The BOSOR 5 shell buckling program was used in the analysis, and several stiffener geometries were investigated. Results show that elastic buckling can occur in the cylindrical portion of some cylinder-bulkhead combinations. If the structure is subjected to repeated loading, then the formation and disappearance of the elastic buckles could contribute to the initiation of fatigue cracks. Some of the geometries investigated are like some commercial aircraft configurations. Author

A88-13083#**STRESS INTENSITY FACTORS AND RESIDUAL STRENGTH OF A CRACKED STIFFENED PANEL**

ATSUHIRO SASAKI and KOICHI HIRAOKA Japan Society for Aeronautical and Space Sciences, Journal (ISSN 0021-4663), vol. 34, no. 394, 1986, p. 618-625. In Japanese. refs

An analytical method for determining the stress intensity factors and residual strength of a cracked stiffened panel for the next-generation commercial transport aircraft is presented. Crack verification for the panel is carried out using a modification of

Poe's method, and calculations are made of stress-strain, fastener flexibility, stress intensity factors, stringer load factor, and residual strength of the cracked panel. S.H.

A88-13084#**STRUCTURE SIMPLIFICATION AROUND A CUTOUT - APPLICATION OF A SIMPLIFIED DAMAGE TOLERANCE DESIGN CHART**

TETSUO UCHIMOTO, KANYA KOGA, and KOICHI HIRAOKA Japan Society for Aeronautical and Space Sciences, Journal (ISSN 0021-4663), vol. 34, no. 394, 1986, p. 626-632. In Japanese. refs

The paper describes the development of a simplified damage tolerance design chart for the simplified structure around the cutout for the next-generation commercial transport aircraft. The buildup structure, outer panel, and frame seal are integrated to form the simplified structure, and a damage tolerance evaluation method is established and compared with other methods. An analytical method for determining the stress intensity factor for cracks is discussed. S.H.

TEST RESULTS AND PREDICTIONS FOR THE RESPONSE OF NEAR-CEILING SPRINKLER LINKS IN A FULL-SCALE COMPARTMENT FIRE

LEONARD Y. COOPER and DAVID W. STROUP Sep. 1987 45 p

(NBSIR-87-3633) Avail: NTIS HC A03/MF A01

Data acquired during a test program which involved full-scale, sprinklered, compartment fires is presented and analyzed. This work focuses attention specifically on key features of the typical sprinkler link deployment/response problem. It is found that the elevated temperature, upper smoke layer which develops inevitably in compartment fires can have a major impact on the thermal response of sprinkler links. It is shown that traditionally accepted methods of predicting sprinkler response which do not account for this upper layer can be totally inadequate. Link response predictions used here involve a new method of calculation which does take account of the smoke layer environment. Favorable comparisons between predictions and experiment are obtained and experiments for further validation of this method are recommended. Finally, it is found that sprinkler link-to-ceiling spacing can have a significant effect on the thermal response of links and it is recommended that a method which accounts for this effect be developed and validated. DETECTION OF TARGETS IN THE PRESENCE OF CLUTTER USING TARGET ECHO MODULATIONS CAUSED BY ROTATING STRUCTURES Thesis - Hochschule der Bundeswehr, Neubiberg, West Germany

G. RETZER Nov. 1986 142 p In GERMAN; ENGLISH summary

(Contract BMVG-T/RF31/71455/71340)

(REPT-12-86; LFD-256; ETN-87-90393) Avail: Issuing Activity

The radar detection of hovering helicopters in the presence of clutter was investigated. It is shown that radar backscatter modulation by helicopter rotors can be described as line spectra in the frequency domain, with the spacings equivalent to the product of the rotor rotation frequency and the number of rotor blades. Typical values are between 10 and 40 Hz. Experimental results obtained with a coherent E-band pulse Doppler radar are in good agreement with calculated values. Based on these results, a detector which allows the detection of hovering helicopters in the presence of clutter is proposed. The required radar parameters, such as radar dwell time and radar pulse repetition frequency, are discussed. ESA

A computer program for the calculation of compact heat
exchangers for gas turbines was developed. The most important
coefficients, pressure drops, and effectiveness of different kinds
of exchangers were calculated as a function of Mach number, the
dimensions of the exchanger, and the compactness. From the
aerothermodynamic point of view, the plate exchanger is best,
closely followed by the lancet heat exchanger. The ribs of the
plate version have no significant effect on the characteristics, but
are required for stiffness and uniform channel height. The tube
heat exchanger can only compete as far as the transferable heat
is concerned. ESA

A collapsible steering mechanism for a vehicle, comprising a
steering shaft having a steering means connected to its upper
end and a steering gear connected to its lower end is presented.
The steering shaft comprises an elongated energy absorbing tube
having a bond between the tube and one or both of the steering
gear and the steering means. The longitudinal axial component of
the bond is adapted to disrupt under crash impact and to allow
the tube to progressively collapse and absorb the impact energy.

**THE DESIGN OF A TURBOSHAFT SPEED GOVERNOR USING
MODERN CONTROL TECHNIQUES Final Report, 30 Sep. 1982
- 20 Feb. 1985**

G. DELOSREYES and D. R. GOUCHOE Feb. 1986 220 p
(Contract NAS3-22763)
(NASA-CR-175046; NAS 1.26:175046) Avail: NTIS HC A10/MF
A01 CSCL 131

The objectives of this program were: to verify the model of
off schedule compressor variable geometry in the T700 turboshaft
engine nonlinear model; to evaluate the use of the pseudo-random
binary noise (PRBN) technique for obtaining engine frequency
response data; and to design a high performance power turbine
speed governor using modern control methods. Reduction of T700
engine test data generated at NASA-Lewis indicated that the off
schedule variable geometry effects were accurate as modeled.
Analysis also showed that the PRBN technique combined with
the maximum likelihood model identification method produced a
Bode frequency response that was as accurate as the response
obtained from standard sinewave testing methods. The frequency
response verified the accuracy of linear models consisting of engine
partial derivatives and used for design. A power turbine governor
was designed using the Linear Quadratic Regulator (LQR) method
of full state feedback control. A Kalman filter observer was used
to estimate helicopter main rotor blade velocity. Compared to the
baseline T700 power turbine speed governor, the LQR governor
reduced droop up to 25 percent for a 490 shaft horsepower
transient in 0.1 sec simulating a wind gust, and up to 85 percent
for a 700 shaft horsepower transient in 0.5 sec simulating a large
collective pitch angle transient. Author

HC A03/MF A01

Fatigue tests were carried out to evaluate the fatigue properties
of alloy steels S99, S155 and AF1410, which span a wide range
in toughness value (50 to 150 MPa square root m). The fighter
aircraft loading sequence (FALSTAFF) and conventional constant
amplitude loading were used for the fatigue tests. The expected
tensile strength levels (specification minima) are met by the alloys
S99 and S155. The AF1410 material is slightly below specification.
The fatigue performance of S155 is significantly inferior to that of
S99 and AF1410. ESA

(NLR-MP-86013-U; B8701061; ETN-87-90824) Avail: NTIS HC
A03/MF A01

The crack opening behavior of a fatigue crack in a centrally
cracked panel was studied using a discretized version of the
Dugdale and Barenblatt model. The effect of crack growth was
included. Results for constant amplitude loading agree with the
literature. The effect of single overload-underload combinations
and of simple block loading programs on the crack opening
behavior was analyzed. The results were compared with predictions
based on an empirical model (CORPUS). The criteria used in the
CORPUS model to select significant load excursions in the applied
load sequence were checked. Both models were used to predict
crack growth under a simplified landing gear load sequence. The

predicted crack opening loads and the crack growth lives agree with experiment. ESA

BOUNDARY LAYER PROFILE INVESTIGATIONS DOWNSTREAM OF AN AERO-ENGINE INTAKE ANTI-ICING AIR EXHAUST SLOT

S. J. DOWNS and E. H. JAMES (Loughborough Univ. of Technology, England) 31 May 1987 8 p Presented at the 32nd ASME International Gas Turbine Conference and Exhibition, Anaheim, Calif., 31 May - 4 Jun. 1987 (PNR90378; ETN-87-90994) Avail: NTIS HC A02/MF A01

The boundary layer profile downstream of the anti-icing air exhaust slot of a two-dimensional aeroengine inlet section was investigated by a pitot rake. Results for a range of inlet engine airflows with and without exhaust anti-icing air introduced are presented. The boundary layer is found to be turbulent as expected owing to the presence upstream in the wind tunnel of a fixed water spray grid which may be used to simulate engine operation in clouds. Injection of anti-icing air produces a sublayer downstream of the anti-icing air exhaust plane. Three methods of deriving boundary layer thickness from the experimental data were used and theoretical values determined. Experimental measurements confirm theoretical trends. ESA

OPTICAL FLOW DIAGNOSTIC MEASUREMENTS IN TURBOMACHINERY

D. G. JONES and R. J. PARKER 1 Jun. 1987 13 p Presented at the 8th ISABE Conference, Cincinnati, Ohio, 15-19 Jun. 1987 Previously announced in IAA as A87-46245 Sponsored by the United Kingdom Ministry of Defense Procurement Executive (PNR90396; ETN-87-90999) Avail: NTIS HC A03/MF A01

Flow measurements within the passages of rotating model fans was measured using laser holographic flow visualization and laser transit anemometry. The complementary nature of the two techniques uses the ability of holography to provide a diagnostic identification in three dimensions of main features of the flow and the ability of laser anemometry to provide quantitative measurements of the flow velocity at selected spatial locations. It is shown how the optical techniques, when suitably designed and ruggedized for a hostile environment, provide quantitative information of the intrapassage flows for a sequence of tests on wide chord fan blades, which aided the validation of their design intent. IMPACT OF TURBULENCE MODELING ON NUMERICAL ACCURACY AND EFFICIENCY OF COMPRESSIBLE FLOW SIMULATIONS

THOMAS J. COAKLEY Sep. 1986 9 p (NASA-TM-88333; A-86326; NAS 1.15:88333) Avail: NTIS HC A02/MF A01 CSCL 20D

Discussed is the numerical implementation of turbulence models used in viscous compressible flow simulations and their performance described with respect to numerical accuracy, efficiency and stability. The basic approach utilizes the Reynolds-averaged compressible Navier-Stokes equations in which the Reynolds stresses and heat fluxes are mathematically modeled by suitable turbulence models. The turbulence models investigated include zero-, one-, and two-equation eddy viscosity models. The flow fields investigated include theoretical and supersonic flows about two-dimensional and axisymmetric bodies. Discussions concerning the numerical implementation of models include differencing procedures and boundary conditions used to assume numerical stability and accuracy. Numerical performance is also evaluated by comparing computations with experimental results. Author

COMPUTATION OF TRANSONIC SEPARATED WING FLOWS USING AN EULER/NAVIER-STOKES ZONAL APPROACH

UENVER KAYNAK, TERRY L. HOLST, and BRIAN J. CANTWELL (Stanford Univ., Calif.) Jul. 1986 152 p (NASA-TM-88311; A-86271; NAS 1.15:88311) Avail: NTIS HC A08/MF A01 CSCL 20D

A computer program called Transonic Navier Stokes (TNS) has been developed which solves the Euler/Navier-Stokes equations around wings using a zonal grid approach. In the present zonal scheme, the physical domain of interest is divided into several subdomains called zones and the governing equations are solved interactively. The advantages of the Zonal Grid approach are as follows: (1) the grid for any subdomain can be generated easily; (2) grids can be, in a sense, adapted to the solution; (3) different equation sets can be used in different zones; and, (4) this approach allows for a convenient data base organization scheme. Using this code, separated flows on a NACA 0012 section wing and on the NASA Ames WING C have been computed. First, the effects of turbulence and artificial dissipation models incorporated into the code are assessed by comparing the TNS results with other CFD codes and experiments. Then a series of flow cases is described where data are available. The computed results, including cases with shock-induced separation, are in good agreement with experimental data. Finally, some futuristic cases are presented to

demonstrate the abilities of the code for massively separated cases which do not have experimental data. Author

THE USE OF KEVLAR ON AERO-ENGINE FAN CONTAINMENT CASINGS

I. F. STEWART 18 May 1987 9 p Presented at the Impact 87 Conference, Bremen, Federal Rep. of Germany, 18-22 May 1987

(PNR90410; ETN-87-91003) Avail: NTIS HC A02/MF A01

The use of Kevlar to reduce the weight of fan containment casings is described. Continuous layers of dry, woven Kevlar are wrapped around a light former (the casing). Upon release, the blade punctures the casing and its energy is absorbed by the whole circumference of Kevlar, unlike a traditional metal casing which has to be thick enough so that all the blade energy is absorbed in the local area of impact where the blade hits the casing. Tests indicate that casing weights 50% of ARMVO casings are achievable. A theoretical model for predicting Kevlar deflections was developed. Over a wide range of blade energies, weave types, wrapping tensions, and numbers of layers it gives good agreement with test results. The significant reduction in deflections predicted for increased wrapping tension agrees well with measured test results. ESA

IMPROVED OIL-OFF SURVIVABILITY OF TAPERED ROLLER BEARINGS Final Report, 1982 - 1987

GARY E. KREIDER and PETER W. LEE Oct. 1987 86 p
(Contract NAS3-23689; DA PROJ. 1L1-61102-AH-45)
(NASA-CR-180804; NAS 1.26:180804; AVSCOM-TR-87-C-29)
Avail: NTIS HC A05/MF A01 CSCL 13I

The aim of this program is to improve the oil-off survivability of a tapered roller bearing when applied to a helicopter transmission, since the tapered bearing has shown a performance advantage in this application. However, the critical roller end-rib conjunction is vulnerable to damage in an oil-off condition. Three powdered metal materials were selected to use as the rib material

for oil-off evaluation. These were: M2 steel to a 65% density, CBS 1000M 65% density, and CBS 1000M 75% density. The bearing styles tested were ribbed cone (inner race) and ribbed cup (outer race). Carburized solid CBS 600 was also used as a ribbed material for comparison of oil-off results. The tests were conducted at six speeds from 4000 rpm (0.26 million DN) through 37000 rpm (2.4 million DN). The ribbed cup style bearing achieved longer lives than the ribbed cone style. A standard bearing lasted only 10 minutes at 4000 rpm; however, the 30-min oil-off goal was achieved through 11000 rpm using the survivable ribbed cup bearing. The oil-off lives at 37000 rpm were less than 10 seconds. The grinding of the powder metal materials and surface preparation to achieve an open porosity is extremely critical to the oil-off performance of the powder metal component. Author

DEVELOPMENT OF HEAT FLUX SENSORS FOR TURBINE AIRFOILS

WILLIAM H. ATKINSON, MARCIA A. CYR, and RICHARD R. STRANGE /In NASA. Lewis Research Center, Turbine Engine Hot Section Technology, 1985 p 51-58 Oct. 1985
 (Contract NAS3-23529)

Avail: NTIS HC A19/MF A01 CSCL 14B

The objectives of this program are to develop heat flux sensors suitable for installation in hot section airfoils of advanced aircraft turbine engines and to experimentally verify the operation of these heat flux sensors in a cylinder in a cross flow experiment. Embedded thermocouple and Gardon gauge sensors were developed and fabricated into both blades and vanes. These were then calibrated using a quartz lamp bank heat source and finally subjected to thermal cycle and thermal soak testing. These sensors were also fabricated into cylindrical test pieces and tested in a burner exhaust to verify heat flux measurements produced by these sensors. The results of the cylinder in cross flow tests are given.

FUEL-INJECTOR/AIR-SWIRL CHARACTERIZATION

J. B. MCVEY, J. B. KENNEDY, and J. C. BENNETT (Connecticut Univ., Storrs.) /In NASA. Lewis Research Center, Turbine Engine Hot Section Technology, 1985 p 109-117 Oct. 1985
 (Contract NAS3-24352)

Avail: NTIS HC A19/MF A01 CSCL 20D

The objectives of this program are to establish an experimental data base documenting the behavior of gas turbine engine fuel injector sprays as the spray interacts with the swirling gas flow existing in the combustor dome, and to conduct an assessment of the validity of current analytical techniques for predicting fuel spray behavior. Emphasis is placed on the acquisition of data using injector/swirler components which closely resemble components currently in use in advanced aircraft gas turbine engines, conducting tests under conditions that closely simulate or closely approximate those developed in actual combustors, and conducting a well-controlled experimental effort which will comprise using a combination of low-risk experiments and experiments requiring the use of state-of-the-art diagnostic instrumentation. Analysis of the data is to be conducted using an existing, TEACH-type code which employs a stochastic analysis of the motion of the dispersed phase in the turbulent continuum flow field.

DILUTION JET MIXING PROGRAM, PHASE 3

R. SRINIVASAN, G. MYERS, and C. WHITE /In NASA. Lewis Research Center, Turbine Engine Hot Section Technology, 1985 p 127-132 Oct. 1985

(Contract NAS3-22110)

Avail: NTIS HC A19/MF A01 CSCL 20D

The objectives of the program were: (1) to extend the data base on mixing of a single-sided row of jets with a confined crossflow, (2) to collect a data base on mixing of multiple rows of jets with confined crossflow, (3) to develop empirical jet mixing correlations, and (4) to perform limited three-dimensional calculations for some of these test configurations. The tests were

performed with uniform mainstream conditions for several orifice plate configurations. Schematics of the test section and the orifice configurations are given. Temperature and pressure measurements were made in the test section at 4 axial and 11 transverse stations, using a 60-element rake probe. The measured temperature distributions for these tests are reported.

ON THE MIXING OF A ROW OF JETS WITH A CONFINED CROSSFLOW

J. D. HOLDEMAN /In its Turbine Engine Hot Section Technology, 1985 p 133-138 Oct. 1985

Avail: NTIS HC A19/MF A01 CSCL 20D

Mean temperature profiles calculated with an interactive microcomputer code which evaluates dilution-zone design alternatives are presented to show the effects of flow and geometric variables on the mixing of a single row of jets injected through sharp-edged orifices into a uniform flow of a different temperature in a constant area duct. In addition, this program is used to calculate profiles for opposed rows of jets with their centerlines in-line, by assuming that the confining effect of an opposite wall is equivalent to that of a plane of symmetry between opposed jets.

COOLANT PASSAGE HEAT TRANSFER WITH ROTATION

T. J. HAJEK and A. W. HIGGINS /In NASA. Lewis Research Center, Turbine Engine Hot Section Technology, 1985 p 187-201 Oct. 1985

(Contract NAS3-23691)

Avail: NTIS HC A19/MF A01 CSCL 20D

The objective is to develop a heat transfer and pressure drop data base, computational fluid dynamic techniques, and correlations for multi-pass rotating coolant passages with and without flow turbulators. The experimental effort is focused on the simulation of configurations and conditions expected in the blades of advanced aircraft high pressure turbines. With the use of this data base, the effects of Coriolis and buoyancy forces on the coolant side flow can be included in the design of turbine blades.

HEAT TRANSFER WITH VERY HIGH FREE STREAM TURBULENCE

ROBERT J. MOFFAT and PAUL K. MACIEJEWSKI /In NASA. Lewis Research Center, Turbine Engine Hot Section Technology, 1985 p 203-215 Oct. 1985

(Contract NAG3-522)

Avail: NTIS HC A19/MF A01 CSCL 20D

Stanton numbers as much as 350 percent above the accepted correlations for flat plate turbulent boundary layer heat transfer have been found in experiments on a low velocity air flow with very high turbulence (up to 50 percent). These effects are far larger than have been previously reported and the data do not correlate as well in boundary layer coordinates (Stanton number and Reynolds number) as they do in simpler coordinates: h vs. X . The very high relative turbulence levels were achieved by placing the test plate in different positions in the margin of a large diameter free jet. The large increases may be due to organized structures of large scale which are present in the marginal flowfield around a free jet.

FLOW IN A MODEL TURBINE STATOR

R. C. BUGGEIN, S. J. SHAMROTH, and W. R. BRILEY /in NASA. Lewis Research Center, Turbine Engine Hot Section Technology, 1985 p 221-226 Oct. 1985

(Contract NAS3-24358)

Avail: NTIS HC A19/MF A01 CSCL 20D

In view of the complex nature of the flowfield in the hot section of gas turbine engines, the need to predict heat transfer and flow losses, the possible appearance of separation and strong secondary flows, etc., the present effort is focusing upon a Navier-Stokes approach to the three dimensional turbine stator problem. The advantages of a full Navier-Stokes approach are clear since when combined with a suitable turbulence model these equations represent the flow and heat transfer physics. In particular, the Navier-Stokes equations accurately represent possible separated regions and regions of significant secondary flow. In addition, the Navier-Stokes approach allows representation of the entire flow field by a single set of equations, thus avoiding problems associated with representing different regions of the flow by different equations and then matching flow regions. 3D INELASTIC ANALYSIS METHODS FOR HOT SECTION COMPONENTS

L. T. DAME, P. C. CHEN, M. S. HARTLE, and H. T. HUANG /in NASA. Lewis Research Center, Turbine Engine Hot Section Technology, 1985 p 227-237 Oct. 1985

(Contract NAS3-23698)

Avail: NTIS HC A19/MF A01 CSCL 20K

The objective is to develop analytical tools capable of economically evaluating the cyclic time dependent plasticity which occurs in hot section engine components in areas of strain concentration resulting from the combination of both mechanical and thermal stresses. Three models were developed. A simple model performs time dependent inelastic analysis using the power law creep equation. The second model is the classical model of Professors Walter Haisler and David Allen of Texas A and M University. The third model is the unified model of Bodner, Partom, et al. All models were customized for linear variation of loads and temperatures with all material properties and constitutive models being temperature dependent. Author

CONSTITUTIVE MODELING FOR ISOTROPIC MATERIALS

ULRIC S. LINDHOLM /in NASA. Lewis Research Center, Turbine Engine Hot Section Technology, 1985 p 303-306 Oct. 1985

(Contract NAS3-23925)

Avail: NTIS HC A19/MF A01 CSCL 20K

The objective is to develop a unified constitutive model for finite element structural analysis of turbine engine hot-section components. This effort constitutes a different approach for non-linear finite-element computer codes which have heretofore

been based on classical inelastic methods. The unified constitutive theory to be developed will avoid the simplifying assumptions of classical theory and should more accurately represent the behavior of superalloy materials under cyclic loading conditions and high temperature environments. During the first two years of the program, extensive experimental correlations were made with two representative unified models. The experiments were both uniaxial and biaxial at temperatures up to 1093 C (2000 F). In addition, the unified models were adopted to the MARC finite element code and used for stress analysis of notched bar and turbine blade geometries. Author

CONSTITUTIVE MODELING FOR ISOTROPIC MATERIALS

V. G. RAMASWAMY, R. H. VANSTONE, L. T. DAME, and J. H. LAFFLEN /in NASA. Lewis Research Center, Turbine Engine Hot Section Technology, 1985 p 307-320 Oct. 1985

(Contract NAS3-23927)

Avail: NTIS HC A19/MF A01 CSCL 20K

Constitutive theories were evaluated against a large uniaxial and multiaxial data base that was generated as part of this work. The experimental approach was to determine the constitutive behavior of Rene 80 under a multitude of conditions that are important in the design of gas turbine blades and vanes. The experimental and analytical goals of this program were successfully accomplished. A new multiaxial constitutive model which can represent the complex nonlinear high temperature behavior of Rene 80 was developed. The model was extensively verified on data at several temperatures. CREEP FATIGUE LIFE PREDICTION FOR ENGINE HOT SECTION MATERIALS (ISOTROPIC): THIRD YEAR PROGRESS REVIEW

RICHARD S. NELSON and JOHN F. SCHOENDORF /in NASA. Lewis Research Center, Turbine Engine Hot Section Technology, 1985 p 321-327 Oct. 1985

(Contract NAS3-23288)

Avail: NTIS HC A19/MF A01 CSCL 20K

This program is designed to investigate fundamental damage processes, identify modeling strategies, and develop practical models which can be used to guide the early design and development of new engines and to increase the durability of existing engines. A review is given of the base program, completed in 1984, which included the comparison and evaluation of several popular high-temperature life prediction approaches as applied to continuously cycled isothermal specimen tests. The option program, of which one year is completed, is designed to develop models which can account for complex cycles and loadings, such as thermomechanical cycling, cumulative damage, multiaxial stress/strain rates, and environmental effects. ELEVATED TEMPERATURE CRACK GROWTH

S. N. MALIK, R. H. VANSTONE, K. S. KIM, and J. H. LAFFLEN /in NASA. Lewis Research Center, Turbine Engine Hot Section Technology, 1985 p 329-340 Oct. 1985

(Contract NAS3-23940)

Avail: NTIS HC A19/MF A01 CSCL 20K

The purpose is to determine the ability of currently available P-I integrals to correlate fatigue crack propagation under conditions that simulate the turbojet engine combustor liner environment. The utility of advanced fracture mechanics measurements will also be evaluated during the course of the program. To date, an appropriate specimen design, a crack displacement measurement method, and boundary condition simulation in the computational model of the specimen were achieved. Alloy 718 was selected as an analog material based on its ability to simulate high temperature behavior at lower temperatures. Tensile and cyclic tests were run at several strain rates so that an appropriate constitutive model could be developed. Suitable P-I integrals were programmed into a finite

LIFE PREDICTION AND CONSTITUTIVE MODELS FOR ENGINE HOT SECTION ANISOTROPIC MATERIALS PROGRAM
G. A. SWANSON /In NASA, Lewis Research Center, Turbine Engine Hot Section Technology, 1985 p 341-349 Oct. 1985
(Contract NAS3-23939)
Avail: NTIS HC A19/MF A01 CSCL 20K

The purpose is to develop life prediction models for coated anisotropic materials used in gas temperature airfoils. Two single crystal alloys and two coatings are now being tested. These include PWA 1480; Alloy 185; overlay coating, PWA 286; and aluminide coating, PWA 273. Constitutive models are also being developed for these materials to predict the plastic and creep strain histories of the materials in the lab tests and for actual design conditions. This nonlinear material behavior is particularly important for high temperature gas turbine applications and is basic to any life prediction system. Author

THERMAL EXPANSION MISMATCH AND OXIDATION IN THERMAL BARRIER COATINGS
G. C. CHANG, W. PHUCHAROEN (Cleveland State Univ., Ohio.), and R. A. MILLER /In its Turbine Engine Hot Section Technology, 1985 p 405-425 Oct. 1985
(Contract NCC3-27)
Avail: NTIS HC A19/MF A01 CSCL 13I

Thermal barrier coatings (TBC) for advanced gas turbine blades have been under intensive development during the last several years. This investigation is intended to achieve a clearer understanding of the mechanical behavior of plasma sprayed zirconia-yttria TBCs, involving a nickel-chromium-aluminum bond coat. The near term objectives are to study the stress states in a relatively simple model TBC subjected to steady state thermal loading. The resulting thermal expansion mismatch and oxidation have been primary targets for the study. The finite element approach and the effects of thermal mismatch and oxidation are described. A proposed mechanism for oxidation induced coating failure is also presented. Author

COMPOSITE STRUCTURAL MATERIALS Annual Progress Report no. 50, 1 May 1986 - 30 Apr. 1987
ROBERT G. LOEWY and STEPHEN E. WIBERLEY Aug. 1987 93 p
(Contract NGL-33-018-003)
(NASA-CR-181416; NAS 1.26:181416) Avail: NTIS HC A05/MF A01 CSCL 20K

The development and application of composite materials to aerospace vehicle structures which began in the mid 1960's has now progressed to the point where what can be considered entire airframes are being designed and built using composites. Issues related to the fabrication of non-resin matrix composites and the micro, mezzo and macromechanics of thermoplastic and metal matrix composites are emphasized. Several research efforts are presented. They are entitled: (1) The effects of chemical vapor deposition and thermal treatments on the properties of pitch-based carbon fiber; (2) Inelastic deformation of metal matrix laminates; (3) Analysis of fatigue damage in fibrous MMC laminates; (4) Delamination fracture toughness in thermoplastic matrix composites; (5) Numerical investigation of the microhardness of composite fracture; and (6) General beam theory for composite structures. THE INFLUENCE OF LOAD CYCLE RECONSTITUTION ON FATIGUE BEHAVIOUR

J. M. FINNEY and F. G. HARRIS Aug. 1986 37 p
(ARL-STRUC-R-424; AR-004-498) Avail: NTIS HC A03/MF A01
Fatigue experiments have been conducted to assess the influence of the method of reconstituting a load sequence from a range-pair counted load spectrum for a fighter aircraft. In addition to the original flight-by-flight sequence, several quite-structured reconstituted sequences and random reconstituted sequences were used, all sequences having identical range-pair counts. There was little or no difference in crack propagation lives or total lives of two specimen geometries for the several structured sequences which were designed to give the extremes in crack growth life. There was, also, no significant difference in crack propagation lives for specimens tested under the flight-by-flight and random sequences. Crack growth under the more structured sequences was significantly slower than under the more fluctuating sequences (random and flight-by-flight), though the maximum difference of 1.59:1 is small relative to other uncertainties in fatigue life assessment. These results provide a basis for implementing the Aircraft Fatigue Data Analysis System which utilizes strain range-pair counting. Author

CONTRIBUTIONS TO THE MODELING OF WIND SHEAR FOR DANGER STUDIES Ph.D. Thesis [BEITRAEGE ZUR MODELLIERUNG VON SCHERWIND FUER GEFAEHRDUNGSUNTERSUCHUNGEN]

MANFRED SWOLINSKY 1986 202 p In GERMAN (ETN-87-90442) Avail: NTIS HC A10/MF A01

Wind models for flight simulation and the study of the danger during landing due to wind shear were developed. It is demonstrated that the typical wind conditions in weather phenomena such as thunderstorm fall winds and surface boundary layer wind shear can be approximated by simple engineering models, whereby known solutions and flow forms from flow mechanics were adapted. The good agreement between models and airborne measurements is demonstrated. Based on the developed models the degree of danger during landing under different wind shear conditions was estimated. THE DEPENDENCE OF THE NORMALIZED ICE ACCRETION THICKNESS ON CLOUD-PHYSICAL PARAMETERS

HANS-EBERHARD HOFFMANN, ROLAND ROTH, and JOHANN DEMMEL Jan. 1987 64 p In GERMAN; ENGLISH summary Report will also be announced as translation (ESA-TT-1080) (DFVLR-FB-87-08; ISSN-0171-1342; ETN-87-90455) Avail: NTIS HC A04/MF A01; DFVLR, Cologne, West Germany DM 24.50

Normalized ice accretion thickness was studied using the measurement results of 38 icing research aircraft flights in icing clouds. Normalized ice accretion is the ice accretion thickness on 3 metal cylinders in flow direction, for a true air speed of 125 kt, and a flight path in clouds of 10 NM (i.e., 18.5 km). In the investigated range of liquid water content up to 0.50 g/cum, the normalized ice thickness grows linearly with increasing liquid water content; it is a little larger for cloud particles freezing instantaneously. The thickness is larger for smaller cylinder diameters. In the temperature range between minus 2 and minus 14 C, a difference in temperature has only a little influence, differences in particle phase and particle size distribution have no influence on the normalized ice accretion thickness. ESA

A88-10158

AN INTEGRATED DISPLAY FOR VERTICAL SITUATION AWARENESS IN COMMERCIAL TRANSPORT AIRCRAFT

ROGER HOUCK, BRIAN D. KELLY, and JOHN WIEDEMANN (Boeing Commercial Airplane Co., Seattle, WA) IN: Aerospace Behavioral Engineering Technology Conference, 5th, Long Beach, CA, Oct. 13-16, 1986, Proceedings. Warrendale, PA, Society of Automotive Engineers, Inc., 1986, p. 61-64. (SAE PAPER 861770)

The need for a sideview-presentation vertical situation display (VSD) for use in commercial transport aircraft is demonstrated. The preliminary conceptual VSD format includes an inside-out presentation with a moving scale and vertical map translating around a fixed airplane symbol. The information is scaled along altitude and distance axes to permit present, predicted, and future altitude requirements to be integrated with other relevant vertical situational information. It is believed that the completed VSD concept will improve the flightcrew's awareness of the aircraft's spatial position throughout the flight. K.K.

A88-10160* Boeing Commercial Airplane Co., Seattle, Wash. **COMPARISON OF PROGRAMMABLE LEGEND KEYBOARD AND DEDICATED KEYBOARD FOR CONTROL OF THE FLIGHT MANAGEMENT COMPUTER**

JEAN M. CRANE, GEORGE P. BOUCEK, JR. (Boeing Commercial Airplane Co., Seattle, WA), and WAYNE D. SMITH (Boeing Military Airplane Co., Wichita, KS) IN: Aerospace Behavioral Engineering Technology Conference, 5th, Long Beach, CA, Oct. 13-16, 1986, Proceedings. Warrendale, PA, Society of Automotive Engineers, Inc., 1986, p. 83-90. refs (Contract NAS1-17635) (SAE PAPER 861772)

A study is described which compares two types of input devices used to operate a flight management computer: a programmable legend (multifunction) keyboard and a conventional (dedicated) keyboard. Pilot performance measures, subjective responses, and a timeline analysis were used in evaluating the two keyboard concepts. A discussion of the factors to be considered in the implementation of a multifunction keyboard is included. Author

PERSPECTIVE TRAFFIC DISPLAY FORMAT AND AIRLINE PILOT TRAFFIC AVOIDANCE

STEPHEN R. ELLIS, MICHAEL W. MCGREEVY (NASA, Ames Research Center, Moffett Field; California, University, Berkeley), and ROBERT J. HITCHCOCK (San Jose State University, CA) Human Factors (ISSN 0018-7208), vol. 29, Aug. 1987, p. 371-382. refs (Contract NCC2-86)

Part-task experiments have examined perspective projections of cockpit displays of traffic information as a means of presenting aircraft separation information to airline pilots. Ten airline pilots served as subjects in an experiment comparing the perspective projection with plan-view projections of the same air traffic situations. The pilots' task was to monitor the traffic display in order to decide if an avoidance maneuver was needed. Pilots took more time to select avoidance maneuvers with a conventional plan-view display than with an experimental perspective display. In contrast to previous results, if the pilots selected a maneuver with the perspective display, they were more likely to choose one with a vertical component. Tabulation of the outcomes of their initial avoidance decisions with both perspective and plan-view displays showed that they were more likely to achieve required separation with maneuvers chosen with the aid of perspective displays. TRADITIONAL VERSUS RULE-BASED PROGRAMMING TECHNIQUES - APPLICATION TO THE CONTROL OF OPTIONAL FLIGHT INFORMATION

WENDELL R. RICKS and KATHY H. ABBOTT (NASA, Langley Research Center, Hampton, VA) SPIE, Technical Symposium Southeast on Optics, Electro-optics, and Sensors, Orlando, FL, May 17-22, 1987, Paper. 8 p. refs

A traditional programming technique for controlling the display of optional flight information in a civil transport cockpit is compared to a rule-based technique for the same function. This application required complex decision logic and a frequently modified rule base. The techniques are evaluated for execution efficiency and implementation ease; the criterion used to calculate the execution efficiency is the total number of steps required to isolate hypotheses that were true and the criteria used to evaluate the implementability are ease of modification and verification and explanation capability. It is observed that the traditional program is more efficient than the rule-based program; however, the rule-based programming technique is more applicable for improving programmer productivity. INITIAL USER EXPERIENCE WITH AN ARTIFICIAL INTELLIGENCE PROGRAM FOR THE PRELIMINARY DESIGN OF CENTRIFUGAL COMPRESSORS

CAROL J. RUSSO (General Electric Co., Aircraft Engine Business Group, Lynn, MA), DENNIS J. NICKLAUS, and SIU S. TONG (General Electric Co., Schenectady, NY) ASME, International Gas Turbine Conference and Exhibition, 32nd, Anaheim, CA, May 31-June 4, 1987, 8 p. refs (ASME PAPER 87-GT-217)

An approach in which existing analysis codes are coupled to a generic AI framework, ENGINEOUS, is proposed for the evaluation of the design of turbomachinery components. Using a simple and incomplete rule base, ENGINEOUS is shown to quickly identify nonobvious solutions balanced for conflicting multiple goals in a small number of iterations which vary linearly with the number of variables. The solution path and driving logic are easily visible, and a parameter study option can rapidly evaluate potential design trade-offs, allowing a critique of the selected design to balance performance against development risks. COMPUTING COMPLEX FOR A SYSTEM FOR THE RADIO-ACOUSTIC SOUNDING OF THE ATMOSPHERE - HARDWARE FACILITIES [VYCHISLITEL'NYI KOMPLEKS SISTEMY RADIOAKUSTICHESKOGO ZONDIROVANIIA ATMOSFERY. APPARATNYE SREDSTVA]

V. I. ALEKHIN, O. V. DRIAMOV, A. I. KLIUSHIN, I. V. KORYTTSEV, and G. I. SIDOROV Radiotekhnika (Kharkov) (ISSN 0485-8972), no. 76, 1986, p. 71-77. In Russian. refs

The paper describes the computing complex of a radio-acoustic sounding system which is used at airports to investigate the meteorological parameters of the atmospheric surface layer. This complex provides for the real-time input of period values of the Doppler frequency of the reflected signal, the calculation of meteorological-parameter values, and the printout of results. Particular attention is given to the design and operation of the controllers. B.J.

AIAA COMPUTERS IN AEROSPACE CONFERENCE, 6TH, WAKEFIELD, MA, OCT. 7-9, 1987, TECHNICAL PAPERS

Conference sponsored by AIAA. Washington, DC, American Institute of Aeronautics and Astronautics, 1987, 397 p. For individual items see A88-12527 to A88-12579.

Papers are presented on the analysis of Ada as a prototyping language; the evaluation of a dual processor implementation for a fault inferring nonlinear detection system; fault-tolerant systems; intelligent interfaces to aircraft systems; the implementation of a research prototype on a fault monitoring and diagnosis system;

future data acquisition capabilities; and the application of AI technology to the analysis and synthesis of reliable software systems. Topics discussed include the spaceplane's astronaut's associate; model-based health monitoring for reusable launch vehicles; Space Shuttle telemetry analysis by a real-time expert system; avionics, AI, and embedded processing systems; methodology requirements for intelligent systems architecture; and commonsense reasoning and superconductivity for self-replicating telerobots. Consideration is given to autonomous spacecraft operations; semiautonomous control for satellite servicing; and expert system control for airborne radar surveillance. I.F.

EVALUATION OF A DUAL PROCESSOR IMPLEMENTATION FOR A FAULT INFERRING NONLINEAR DETECTION SYSTEM
P. M. GODIWALA, A. K. CAGLAYAN (Charles River Analytics, Inc., Cambridge, MA), and F. R. MORRELL (NASA, Langley Research Center, Hampton, VA) IN: AIAA Computers in Aerospace Conference, 6th, Wakefield, MA, Oct. 7-9, 1987, Technical Papers . Washington, DC, American Institute of Aeronautics and Astronautics, 1987, p. 43-51. refs
(AIAA PAPER 87-2762)

The design of a modified fault inferring nonlinear detection system (FINDS) algorithm for a dual-processor configured flight computer is described. The algorithm was changed in order to divide it into its translational dynamics and rotational kinematics and to use it for parallel execution on the flight computer. The FINDS consists of: (1) a no-fail filter (NFF), (2) a set of test-of-mean detection tests, (3) a bank of first order filters to estimate failure levels in individual sensors, and (4) a decision function. NFF filter performance using flight recorded sensor data is analyzed using a filter autoinitialization routine. The failure detection and isolation capability of the partitioned algorithm is evaluated. A multirate implementation for the bias-free and bias filter gain and covariance matrices is discussed. I.F.

INTELLIGENT INTERFACES TO AIRCRAFT SYSTEMS
ROBERT SCHUDY, KEVIN CORKER, and SHELDON BARON (BBN Laboratories, Inc., Cambridge, MA) IN: AIAA Computers in Aerospace Conference, 6th, Wakefield, MA, Oct. 7-9, 1987, Technical Papers . Washington, DC, American Institute of Aeronautics and Astronautics, 1987, p. 93-99. refs
(Contract NAS1-17335)
(AIAA PAPER 87-2776)

An approach for developing intelligent aiding systems for airline flight crews is proposed. This approach proceeds in four cycles: (1) National Traffic Safety Board data and pilot interviews are used to determine the areas in which pilots require aid; (2) a pilot information processing model is designed; (3) an intelligent pilot-aiding model is developed; and (4) systems for implementing aiding functions are defined. This approach is utilized to design a general situation-response pilot-aiding system. The situation-response model and the structure of a general situation-response pilot-aiding system are described. The computer implementation of the situation-response information processing model is examined. I.F.

IMPLEMENTATION OF A RESEARCH PROTOTYPE ONBOARD FAULT MONITORING AND DIAGNOSIS SYSTEM
MICHAEL T. PALMER, KATHY H. ABBOTT, PAUL C. SCHUTTE, and WENDELL R. RICKS (NASA, Langley Research Center, Hampton, VA) IN: AIAA Computers in Aerospace Conference, 6th, Wakefield, MA, Oct. 7-9, 1987, Technical Papers . Washington, DC, American Institute of Aeronautics and Astronautics, 1987, p. 100-107. refs
(AIAA PAPER 87-2777)

Due to the dynamic and complex nature of in-flight fault monitoring and diagnosis, a research effort was undertaken at NASA Langley Research Center to investigate the application of

artificial intelligence techniques for improved situational awareness. Under this research effort, concepts were developed and a software architecture was designed to address the complexities of onboard monitoring and diagnosis. This paper describes the implementation of these concepts in a computer program called FaultFinder. The implementation of the monitoring, diagnosis, and interface functions as separate modules is discussed, as well as the blackboard designed for the communication of these modules. Some related issues concerning the future installation of FaultFinder in an aircraft are also discussed. Author

AVIONICS, ARTIFICIAL INTELLIGENCE, AND EMBEDDED PROCESSING SYSTEMS

PETER M. KOGGE (IBM, Federal Systems Div., Owego, NY) IN: AIAA Computers in Aerospace Conference, 6th, Wakefield, MA, Oct. 7-9, 1987, Technical Papers . Washington, DC, American Institute of Aeronautics and Astronautics, 1987, p. 236-245.
(AIAA PAPER 87-2818)

This paper addresses the characteristics that an embedded processing system must have to support AI functions for various avionics applications. The emphasis is on those kinds of functions that are unconventional in nature, computationally stressing, and of high value to future real-time avionics systems. The topics covered include a brief review of the major computational models for AI in use today, their appropriateness to several avionics AI applications, what their implementation means in terms of processor architectures, and how they might be supported in high performance avionics systems of the near future. AUTONOMOUS PROCESSING USING A BLACKBOARD CHIPSET

STEPHEN A. UCZEKAJ (Boeing Aerospace Co., Seattle, WA), ROBERT GRAHAM, DZIEM NGUYEN, CALVIN LING, THOMAS SKILLMAN (Boeing High Technology Center, Seattle, WA) et al. IN: AIAA Computers in Aerospace Conference, 6th, Wakefield, MA, Oct. 7-9, 1987, Technical Papers . Washington, DC, American Institute of Aeronautics and Astronautics, 1987, p. 358-362. refs
(AIAA PAPER 87-2855)

In the present evaluation of the capabilities of a 'blackboard' AI chipset that can accomplish the cooperative working of separate processes toward the solution of a problem in autonomous processing tasks, attention is given to the development of the chipset that will support the blackboard framework. Chipset support of the blackboard framework is by means of a blackboard control unit that allows opportunistic problem-solving to be undertaken among multiple clusters of processors dedicated to coarse-grain granularity in real-time embedded applications. The autonomous processing capabilities are required for military aircraft threat detection/avoidance and target location/identification. O.C.

(Contract NAS3-23687)

Avail: NTIS HC A19/MF A01 CSCL 09B

The objective is to develop and verify a series of interdisciplinary modeling and analysis techniques that have been specialized to address three specific hot section components. These techniques will incorporate data as well as theoretical methods from many diverse areas including cycle and performance analysis, heat transfer analysis, linear and nonlinear stress analysis, and mission analysis. The new methods developed will be integrated to provide an accurate, efficient, and unified approach to analyzing combustor burner liners, hollow air-cooled turbine blades, and air-cooled turbine vanes. For these components, the methods developed will predict temperature, deformation, stress, and strain histories throughout a complete flight mission.

THE SPATIALLY NONUNIFORM CONVERGENCE OF THE NUMERICAL SOLUTION OF FLOWS

ARGYRIS G. PANARAS Nov. 1987 30 p

(NASA-TM-100037; A-88016; NAS 1.15:100037) Avail: NTIS HC A03/MF A01 CSCL 12A

The spatial distribution of the numerical disturbances that are generated during the numerical solution of a flow is examined. It is shown that the distribution of the disturbances is not uniform. In regions where the structure of a flow is simple, the magnitude of the generated disturbances is small and their decay is fast. However, in complex flow regions, as in separation and vortical areas, large magnitude disturbances appear and their decay may be very slow. The observed nonuniformity of the numerical disturbances makes possible the reduction of the calculation time by application of what may be called the partial-grid calculation technique, in which a major part of the calculation procedure is applied in selective subregions, where the velocity disturbances are large, and not within the whole grid. This technique is expected to prove beneficial in large-scale calculations such as the flow about complete aircraft configurations at high angle of attack. Also, it has been shown that if the Navier-Stokes equations are written in a generalized coordinate system, then in regions in which the grid is fine, such as near solid boundaries, the norms become infinitesimally small, because in these regions the Jacobian has very large values. Thus, the norms, unless they are unscaled by the Jacobians, reflect only the changes that happen at the outer boundaries of the computation domain, where the value of the Jacobian approaches unity, and not in the whole flow field.

APPROACH TRAJECTORY PLANNING SYSTEM FOR MAXIMUM CONCEALMENT

DAVID N. WARNER, JR. Jul. 1986 17 p

(NASA-TM-88258; A-86264; NAS 1.15:88258) Avail: NTIS HC A03/MF A01 CSCL 12A

A computer-simulation study was undertaken to investigate a maximum concealment guidance technique (pop-up maneuver), which military aircraft may use to capture a glide path from masked, low-altitude flight typical of terrain following/terrain avoidance flight enroute. The guidance system applied to this problem is the Fuel Conservative Guidance System. Previous studies using this system have concentrated on the saving of fuel in basically conventional land and ship-based operations. Because this system is based on energy-management concepts, it also has direct application to the pop-up approach which exploits aircraft performance. Although the algorithm was initially designed to reduce fuel consumption, the commanded deceleration is at its upper limit during the pop-up and, therefore, is a good approximation of a minimum-time solution. Using the model of a powered-lift aircraft, the results of the study demonstrated that guidance commands generated by the system are well within the capability of an automatic flight-control system. Results for several initial approach conditions are presented.

AIRCRAFT ACOUSTICS I - EXTERIOR NOISE OF SUBSONIC PASSENGER AIRCRAFT AND HELICOPTERS [AVIATSIONNAIA AKUSTIKA. I - SHUM NA MESTNOSTI DOZVUKOVYKH PASSAZHIRSKIKH SAMOLETOV I VERTOLETOV]

ANATOLII GRIGOR'EVIC MUNIN, ED. Moscow, Izdatel'stvo Mashinostroenie, 1986, 248 p. In Russian. No individual items are abstracted in this volume.

Problems related to the effect of the exterior noise produced by subsonic aircraft and helicopters on the environment and man are examined. The principal sources of noise produced by aircraft and helicopters are identified, and the physical pattern of noise generation is examined. Various method of reducing the noise of aircraft and helicopters are discussed, and methods are presented for predicting the acoustic environment at airports with allowance for the size of the aircraft park and the dynamics of flight operations. The A/F32T-9 Large Turbofan Engine, Enclosed Noise Suppressor System (T-9 NSS) at Sky Harbor International Airport, Phoenix, Arizona was surveyed to determine noise levels at 100 meters. With an F101 engine operating at afterburner power the highest measured Overall Sound Level, A-Weighted (OASLA) was 88.7 dB(A). The measured OASLA values exceeded the 77 dB(A) criterion at all but five of the twenty-four sampling positions.

NOISE OF A MODEL HIGH SPEED COUNTERROTATION PROPELLER AT SIMULATED TAKEOFF/APPROACH CONDITIONS (F7/A7)

RICHARD P. WOODWARD 1987 25 p Presented at the 11th Aeracoustics Conference, Sunnyvale, Calif., 19-21 Oct. 1987: sponsored by AIAA

(NASA-TM-100206; E-3766; NAS 1.15:100206; AIAA-87-2657)

Avail: NTIS HC A03/MF A01 CSCL 20A

A high speed advanced counterrotation propeller, was tested in the NASA-Lewis 9 x 15 foot Anechoic Wind Tunnel at simulated takeoff/approach conditions of 0.2 Mach number. Acoustic measurements were taken with fixed floor microphones, an axially translating microphone probe, and with a polar microphone probe which was fixed to the propeller nacelle and could take both sideline and circumferential acoustic surveys. Aerodynamic measurements were also made to establish the propeller operating conditions. The propeller was run over a range of blade setting angles from 36.4/36.5 to 41.1/39.4 deg, tip speeds from 165 to 259 m/sec, rotor spacings from 1.56 to 3.63 based on forward rotor tip chord to aerodynamic separation, and angles of attack to + or - 16 deg. First order rotor alone tones showed highest directivity levels near the propeller plane, while interaction tone showed high levels throughout sideline directivity, especially toward the propeller rotation axis. Interaction tone levels were sensitive to propeller row spacing while rotor alone tones showed little spacing effect. There is a decreased noise level associated with higher propeller blade numbers for the same overall propeller thrust. Author

NOISE LEVELS FROM PROPELLER-DRIVEN AIRCRAFT MEASURED AT GROUND LEVEL AND AT 1.2 M ABOVE THE GROUND

R. C. PAYNE Mar. 1987 63 p

(NPL-AC-110; ISSN-0143-7143; ETN-87-90931) Avail: Issuing Activity

Aircraft noise measurements using microphones close to the ground plane and at a height of 1.2 m showed substantial differences between measured A-weighted sound levels. The differences depend on ground cover, aircraft type, and flight maneuver. The ground-plane microphones produced A-weighted levels which closely approximate to pressure-doubled values. Two procedures for correcting A-weighted sound pressure levels measured 1.2 m above the ground, to obtain pressure-doubled levels, were examined. In one procedure the noise spectrum was assumed to be represented by a series of 1/3-octave bands, in the other by a number of pure tones or discrete narrow-bands of noise. Neither correction procedure is wholly successful. It is concluded that, to avoid significant variations in measured A-weighted levels, noise measurements must be made using a ground-plane microphone. ESA

NOISE EMISSION OF CIVIL AND MILITARY AERO-ENGINES. SOURCES OF GENERATION AND MEASURES FOR ATTENUATION

H. GRIEB and K. HEINIG Sep. 1986 25 p Presented at the NATO Symposium on Aircraft Noise in the Modern Society, Mittenwald, West Germany, 22-25 Sep. 1986 (ETN-87-91021) Avail: NTIS HC A03/MF A01

It is shown that noise reduction on high bypass ratio turbofans for civil airliners is well established. The noise levels achieved meet the internationally agreed regulations (FAR 36). The same holds true for large military transport aircraft. Helicopter noise is caused essentially by the main and tail rotors. Noise reduction on afterburner and dry engines for combat and strike aircraft, which represent the major noise annoyance to the public, is very difficult because: high specific thrust is mandatory for aircraft performance and effectiveness; jet noise with and without afterburning is predominant; and the design of the reheated section and final (variable) nozzle in practice precludes the application of known concepts for jet noise attenuation in dry and reheated operation.

HELICOPTER MAIN-ROTOR SPEED EFFECTS ON FAR-FIELD ACOUSTIC LEVELS

ARNOLD W. MUELLER, OTIS S. CHILDRESS, and MARK HARDESTY (McDonnell-Douglas Helicopter Co., Mesa, Ariz.) Oct. 1987 20 p Prepared for presentation at the 114th Meeting of the Acoustical Society of America, Miami, Fla., 16-20 Nov. 1987 (NASA-TM-100512; NAS 1.15:100512) Avail: NTIS HC A03/MF A01 CSCL 20A

The design of a helicopter is based on an understanding of many parameters and their interactions. For example, in the design stage of a helicopter, the weight, engine, and rotor speed must be considered along with the rotor geometry when considering helicopter operations. However, the relationship between the noise radiated from the helicopter and these parameters is not well understood, with only limited model and full-scale test data to study. In general, these data have shown that reduced rotor speeds result in reduced far-field noise levels. This paper reviews the status of a recent helicopter noise research project designed to provide experimental flight data to be used to better understand helicopter rotor-speed effects on far-field acoustic levels. Preliminary results are presented relative to tests conducted with a McDonnell Douglas model 500E helicopter operating with the

rotor speed as the control variable over the range of 103% of the main-rotor speed (NR) to 75% NR, and with the forward speed maintained at a constant value of 80 knots.

Typical Subject Index Listing

The subject heading is a key to the subject content of the document. The title is used to provide a description of the subject matter. When the title is insufficiently descriptive of document content, a title extension is added, separated from the title by three hyphens. The (NASA or AIAA) accession number and the page number are included in each entry to assist the user in locating the abstract in the abstract section. If applicable, a report number is also included as an aid in identifying the document. Under any one subject heading, the accession numbers are arranged in sequence with the AIAA accession numbers appearing first.

Airborne reconnaissance X; Proceedings of the Meeting, San Diego, CA, Aug. 19, 20, 1986
[SPIE-694] p 26 A88-12728
Sensor control/data display set (SC/DDS) for film and/or electro optics (EO) p 26 A88-12731
Video data link provides television pictures in near real time via tactical radio and satellite channels
p 49 A88-12732
Real-time reconnaissance - An engineering perspective p 21 A88-12733
Magnetic recording for near real time reconnaissance applications p 27 A88-12736
Synchronizing video signals to standard IRIG time codes p 21 A88-12737
Datalink design trade-offs for electro-optical reconnaissance systems p 27 A88-12740
Airborne reconnaissance pod flight test p 27 A88-12741
Sensor configuration for a short to medium range reconnaissance pod p 27 A88-12742
Imaging through the atmosphere for airborne reconnaissance p 27 A88-12748
Arguments for electro-optical reconnaissance systems p 27 A88-12749
Softcopy versus hardcopy --- digital image displays for aerial reconnaissance p 27 A88-12750
Recent developments in infrared data processing p 28 A88-12751

AEROACOUSTICS

Prediction of sound fields in cavities using boundary-element methods p 61 A88-12281
Investigation of the suitability of the 8ft x 6ft transonic wind-tunnel for aeroacoustic research on propellers
[RAE-TM-AERO-2093] p 39 N88-10041
Noise of a model high speed counterrotation propeller at simulated takeoff/approach conditions (F7/A7)
[NASA-TM-100206] p 61 N88-10592

AERODYNAMIC BALANCE

Dynamic wind tunnel balances in the DFVLR subsonic wind tunnel in Braunschweig p 39 A88-12488

AERODYNAMIC CHARACTERISTICS

On some unsteady aerodynamics characteristics of an NACA 0012 at Reynolds numbers of 125,000 and 400,000 p 10 A88-11189
On the determination of the 2-D characteristics of airfoils at low Reynolds numbers p 10 A88-11192
An experimental investigation of the aerodynamics of the hang glider p 11 A88-11200
The aerodynamics of gliding parachutes p 11 A88-11201

The effect of grit roughness on the performance of the Wortmann FX63-137 airfoil at a chord Reynolds number of 100,000 p 11 A88-11202

Aerodynamics of unmanned aircraft at full-scale in the RAE 24ft wind-tunnel p 12 A88-11204

The performance of model aircraft using flow invigorators, gliding in the critical range of Reynolds number p 12 A88-11206

Effect of energy release in the shock layer on the supersonic flight of bodies p 13 A88-12073

Optimal lifting wings with required longitudinal balancing characteristics p 14 A88-12075

An aerodynamic design study of transonic transport wings p 15 A88-13078

High-lift-device design and low-speed wind-tunnel test p 15 A88-13079

Integration of dynamic, aerodynamic and structural optimization of helicopter rotor blades
[NASA-CR-181441] p 16 N88-10012

Diagnosis of flow channel in aircraft gas-turbine engines on basis of vibration spectrum characteristics
p 35 N88-10993

AERODYNAMIC COEFFICIENTS

Unsteady aerodynamic measurements on a rotating compressor blade row at low Mach number
[ASME PAPER 87-GT-221] p 7 A88-11118
Exact and asymptotic expressions of the lift slope coefficient of an elliptic wing p 14 A88-12292
International Conference on the Aerodynamics at Low Reynolds Numbers between 10(4) and 10(6)
[ONRL-7-023-C] p 16 N88-10010
Investigations of separated flow states on wings of medium aspect ratio taking into account the wind tunnel interference problem
[ETN-87-90437] p 17 N88-10016

AERODYNAMIC CONFIGURATIONS

Problem and solution formulations for the generation of 3D block-structured grids --- aircraft design
[NLR-MP-86020-U] p 25 N88-10028
The aerothermodynamic environment for holes in hypersonic configurations
[DE87-014651] p 17 N88-10767

AERODYNAMIC DRAG

The development of wing theory p 14 A88-12483

AERODYNAMIC HEAT TRANSFER

Calculation of aerodynamic heat transfer for blunt-nosed thin wings at different angles of attack at supersonic speeds
[NASA-TT-20127] p 18 N88-10776

AERODYNAMIC INTERFERENCE

A transonic model representation for two-dimensional wall interference assessment
[NLR-TR-86026-U] p 15 N88-10006
Wall interference tests of a CAST 10-2/DOA 2 airfoil in an adaptive-wall test section
[NASA-TM-4015] p 18 N88-10772

AERODYNAMIC LOADS

New Soviet commercial airliners p 23 A88-10655
The fourth generation of TL commercial aircraft
p 23 A88-10656

AERODYNAMIC STALLING

Through-flow analysis of a multi-stage compressor operating at near-stall conditions
[ASME PAPER 87-GT-51] p 4 A88-11003
A theoretical study of spanwise-periodic 3-D disturbances in the wake of a slightly stalled wing at low Reynolds numbers p 8 A88-11180

AERODYNAMICS

Aerodynamics at low Reynolds numbers Re greater than 10 to the 4th and less than 10 to the 6th; Proceedings of the International Conference, London, England, Oct. 15-18, 1986, Volumes 1, 2, & 3 p 8 A88-11176
Aerodynamics at low Reynolds numbers - A review of theoretical and experimental research at Delft University of Technology p 8 A88-11177
Development and implementation of an aerodynamic holographic interferometry system p 49 A88-12725

AEROELASTICITY

Velocity scaled aeroelastic testing of advanced turboprops
[ASME PAPER 87-GT-209] p 31 A88-11110

The history of aeroelasticity research in Germany from the beginning until 1945 --- airframes
[DFVLR-MITT-86-25] p 1 N88-10003

Analytical modeling of helicopter static and dynamic induced velocity in GRASP
[NASA-TM-100026] p 18 N88-10777

AGARD standard aeroelastic configurations for dynamic response. Candidate configuration I-wing 445.6
[NASA-TM-100492] p 56 N88-11202

AERONAUTICAL ENGINEERING

Color display programming for aviation
[DFVLR-MITT-87-03] p 28 N88-10031

AERONAUTICAL SATELLITES

An overview of space and aircraft navigation
p 40 A88-13086

A hybrid navigation system with GPS
p 21 A88-13087

AEROSPACE ENGINEERING

Investigations in the history and theory of development of aerospace science and technology. Number 5 --- Russian book p 62 A88-12202

AEROSPACE ENVIRONMENTS

High temperature metal matrix composites for future aerospace systems
[NASA-TM-100212] p 43 N88-10938

AEROSPACE INDUSTRY

Aerospace research at the National Aerospace Laboratory (NLR)
[ETN-87-90821] p 62 N88-10697

AEROSPACE PLANES

An Orient Express to capture the market
p 1 A88-10370

The scramjet - Toward Mach 4-25 flight
p 33 A88-13095

AEROSPACE SCIENCES

Investigations in the history and theory of development of aerospace science and technology. Number 5 --- Russian book p 62 A88-12202

AEROSPACE SYSTEMS

Force commutated direct frequency changers for aerospace power applications p 48 A88-11825

AEROTHERMODYNAMICS

The aerothermodynamic environment for holes in hypersonic configurations
[DE87-014651] p 17 N88-10767

AFTERBODIES

Comparison of wind tunnel and flight test afterbody and nozzle pressures for a twin-jet fighter aircraft at transonic speeds
[NASA-TP-2588] p 17 N88-10765

Effect of empennage arrangement on single-engine nozzle/afterbody static pressures at transonic speeds
[NASA-TP-2753] p 17 N88-10771

AIR

Fuel-injector/air-swirl characterization
p 54 N88-11150

Dilution jet mixing program, phase 3
p 54 N88-11153

AIR BREATHING ENGINES

An Orient Express to capture the market
p 1 A88-10370

AIR CARGO

Aircraft accident reports, brief format, US civil and foreign aviation. Issue number 1: 1986 accidents
[PB87-916903] p 19 N88-10781

AIR FLOW

Effect of rib angle on local heat/mass transfer distribution in a two-pass rib-roughened channel
[ASME PAPER 87-GT-94] p 45 A88-11033

Boundary layer profile investigations downstream of an aero-engine intake anti-icing air exhaust slot
[ASME PAPER 87-GT-237] p 32 A88-11127

Boundary layer profile investigations downstream of an aero-engine intake anti-icing air exhaust slot
[PNR90378] p 52 N88-11080

AIR NAVIGATION

Optimal information processing for sensors and sensor systems - The case of radar sensors p 26 A88-10685

Autonomous onboard collision avoidance for aircraft and ships p 21 A88-10687

Civil aviation application of the Global Positioning System (GPS) and its issues p 22 A88-13088

AIR TRAFFIC

Development studies of a European data network for acquisition, processing, and display of air-traffic data
p 21 A88-10688

The conflict resolution process for TCAS II and some simulation results p 21 A88-12474

Perspective traffic display format and airline pilot traffic avoidance p 58 A88-12639

AIR TRAFFIC CONTROL

BMFT-supported projects in the fields position-finding, navigation, and traffic safety p 20 A88-10677

An overview of space and aircraft navigation
p 40 A88-13086

Knowledge Based Concepts and Artificial Intelligence: Applications to Guidance and Control
[AGARD-LS-155] p 38 N88-10806

An expert system for aircraft conflict resolution in dense airspaces p 22 N88-10810

A rule-based system for arrival sequencing and scheduling in air traffic control p 22 N88-10815

AIR TRAFFIC CONTROLLERS (PERSONNEL)

An expert system for aircraft conflict resolution in dense airspaces p 22 N88-10810

A rule-based system for arrival sequencing and scheduling in air traffic control p 22 N88-10815

AIR TRANSPORTATION

Hydrogen in air transportation - Feasibility study for Zurich Airport, Switzerland p 41 A88-11146

Issues in air transport and airport management
[PB87-204509] p 19 N88-10782

AIRBORNE EQUIPMENT

Testing of aircraft electrical equipment --- Russian book p 39 A88-10044

Fast stable solution of a dispersion equation of linear filtering --- for flight vehicle radar system
p 21 A88-10728

HTTB - The ultimate test bed p 23 A88-10875

Airborne reconnaissance pod flight test
p 27 A88-12741

Sensor configuration for a short to medium range reconnaissance pod p 27 A88-12742

Arguments for electro-optical reconnaissance systems
p 27 A88-12749

Test of IR arrays on the Kuiper Airborne Observatory
p 49 A88-12838

AIRBORNE SURVEILLANCE RADAR

Expert system control for airborne radar surveillance
[AIAA PAPER 87-2854] p 26 A88-12574

AIRBORNE/SPACEBORNE COMPUTERS

Comparison of programmable legend keyboard and dedicated keyboard for control of the flight management computer
[SAE PAPER 861772] p 57 A88-10160

AIAA Computers in Aerospace Conference, 6th, Wakefield, MA, Oct. 7-9, 1987, Technical Papers
p 58 A88-12526

Evaluation of a dual processor implementation for a fault inferring nonlinear detection system
[AIAA PAPER 87-2762] p 59 A88-12532

Intelligent interfaces to aircraft systems
[AIAA PAPER 87-2776] p 59 A88-12539

Implementation of a research prototype onboard fault monitoring and diagnosis system
[AIAA PAPER 87-2777] p 59 A88-12540

Avionics, artificial intelligence, and embedded processing systems
[AIAA PAPER 87-2818] p 59 A88-12558

AIRCRAFT

Steering mechanism --- vehicles
[EP-PATENT-0-181-700-A1] p 51 N88-10338

AIRCRAFT ACCIDENT INVESTIGATION

Aircraft accident reports, brief format, US civil and foreign aviation. Issue number 1: 1986 accidents
[PB87-916903] p 19 N88-10781

AIRCRAFT ACCIDENTS

Aircraft accidents
[JB-84] p 19 N88-10020

Full-scale transport controlled impact demonstration program
[NASA-TM-89642] p 19 N88-10021

AIRCRAFT COMPARTMENTS

Aircraft acoustics II - Cabin noise in passenger aircraft --- Russian book p 61 A88-10048

Prediction of sound fields in cavities using boundary-element methods p 61 A88-12281

Test results and predictions for the response of near-ceiling sprinkler links in a full-scale compartment fire
[NBSIR-87-3633] p 50 N88-10209

AIRCRAFT CONFIGURATIONS

The will to European unity as exemplified by A320
p 23 A88-10659

Integration effects of D-shaped, underwing, aft-mounted, separate-flow, flow-through nacelles on a high-wing transport
[NASA-TM-4018] p 18 N88-10773

AIRCRAFT CONSTRUCTION MATERIALS

The fourth generation of TL commercial aircraft
p 23 A88-10656

Composite materials in rotorcraft p 24 A88-12412

Composites technology in Army aviation
p 24 A88-12413

Mechanical property requirements for aero gas turbine materials p 42 A88-12628

Developments in disc materials --- for gas turbine engines p 42 A88-12632

High-temperature sheet materials for gas turbine applications p 42 A88-12635

The fatigue properties of aerospace steels under constant amplitude and flight-by-flight simulated loading
[BAE-MSM-R-GEN-0566] p 51 N88-10377

AIRCRAFT CONTROL

Robotic air vehicle - A pilot's perspective
p 19 A88-10437

The impact of modern technology on aircraft avionics equipment p 26 A88-10679

HIDEC adaptive engine control system flight evaluation results
[ASME PAPER 87-GT-257] p 32 A88-11137

Design study for an FBW lateral control system
p 36 A88-13080

Measurements in the functional mock up test of the NAL QSTOL aircraft control system
[NAL-TR-928] p 36 A88-10793

A survey of aircraft integrated control technology
[AR-004-561] p 37 N88-10794

A preliminary investigation into the feasibility of implementing a direct sideforce control system on the Astra Hawk by means of an active control surface --- aircraft control
[ETN-87-90924] p 37 N88-10795

The application of emulation techniques in the analysis of highly reliable, guidance and control computer systems p 37 N88-10798

Knowledge Based Concepts and Artificial Intelligence: Applications to Guidance and Control
[AGARD-LS-155] p 38 N88-10806

Overview of AGARD Lecture Series No. 155: Knowledge-based concepts and artificial intelligence applications to guidance and control p 38 N88-10807

AI expert system technology issues for guidance and control applications p 38 N88-10808

Application of knowledge-based techniques to aircraft trajectory generation and control p 38 N88-10811

Towards the unmanned cockpit p 25 N88-10812

Approach trajectory planning system for maximum concealment
[NASA-TM-88258] p 60 N88-11435

AIRCRAFT DESIGN

Robotic air vehicle - A pilot's perspective
p 19 A88-10437

New Soviet commercial airliners p 23 A88-10655

The will to European unity as exemplified by A320
p 23 A88-10659

Low altitude/airspeed unmanned research aircraft (LAURA) preliminary development p 12 A88-11205

Selection of aerofoil sections for use in man-powered aircraft p 12 A88-11207

Investigations in the history and theory of development of aerospace science and technology. Number 5 --- Russian book p 62 A88-12202

Wing design with a three-dimensional transonic inverse method p 14 A88-13077

An aerodynamic design study of transonic transport wings p 15 A88-13078

High-lift-device design and low-speed wind-tunnel test
p 15 A88-13079

Advanced composite horizontal stabilizer for next-generation commercial aircraft p 24 A88-13081

Design and fabrication trial of a composite flap structure p 1 A88-13082

Some topics on aircraft landing gear design
p 24 A88-13085

International Conference on the Aerodynamics at Low Reynolds Numbers between 10(4) and 10(6)
[ONRL-7-023-C] p 16 N88-10010

Design principles and practices for implementation of MIL-STD-1760 in aircraft and stores
[AD-A183724] p 24 N88-10027

Problem and solution formulations for the generation of 3D block-structured grids --- aircraft design
[NLR-MP-86020-U] p 25 N88-10028

Aerospace research at the National Aerospace Laboratory (NLR)
[ETN-87-90821] p 62 N88-10697

Ensuring the service life of designs (experience in aircraft construction) p 1 N88-10986

AIRCRAFT DETECTION

Towards the design of an intelligent aerospace system
[AIAA PAPER 87-2844] p 26 A88-12569

Autonomous processing using a blackboard chipset
[AIAA PAPER 87-2855] p 59 A88-12575

AIRCRAFT ENGINES

Flight characteristics of aircraft with gas-turbine engines --- Russian book p 23 A88-10049

Evolution and application of CFD techniques for scramjet engine analysis p 28 A88-10358

Analytical study of swirler effects in annular propulsive nozzles p 28 A88-10362

Multimodes to Mach 5 p 28 A88-10371

Starting system for cold weather p 23 A88-10871

Investigation of integrated selection of optimum engine cycle parameters
[ASME PAPER 87-GT-39] p 29 A88-10993

- Time-averaged heat-flux distributions and comparison with prediction for the Teledyne 702 HP turbine stage [ASME PAPER 87-GT-120] p 30 A88-11048
- Introduction and application of the General Electric turbine engine monitoring software within KLM Royal Dutch Airlines [ASME PAPER 87-GT-167] p 30 A88-11078
- Applied reliability/maintainability methodology as a function within life cycle cost --- of aircraft turbine engine [ASME PAPER 87-GT-172] p 46 A88-11082
- The aeromechanical response of an advanced transonic compressor to inlet distortion [ASME PAPER 87-GT-189] p 31 A88-11094
- The United Kingdom engine technology demonstrator programme [ASME PAPER 87-GT-203] p 31 A88-11107
- Effect of fluid inertia on the performance of squeeze film damper supported rotors [ASME PAPER 87-GT-220] p 48 A88-11117
- An improved Stirling engine for model aircraft propulsion p 33 A88-11976
- Current design status and design trend of fuel injectors for jet engines p 33 A88-13076
- Noise emission of civil and military aero-engines. Sources of generation and measures for attenuation [ETN-87-91021] p 62 N88-10595

Application of advanced computational codes in the design of an experiment for a supersonic throughflow fan rotor [ASME PAPER 87-GT-160] p 6 A88-11072
A new method (FTDCDF) for blade design of axial/mixed-flow compressors and its applications [ASME PAPER 87-GT-183] p 31 A88-11090
Gas turbine exhaust systems - Design considerations [ASME PAPER 87-GT-238] p 32 A88-11128
Low Reynolds number airfoil design at the Douglas Aircraft Company p 9 A88-11183
Two-dimensional transonic aerodynamic design method p 14 A88-12284
An uncooled linescan thermal imager for ground and airborne use p 49 A88-12840
A compact high performance thermal imager p 50 A88-12843
Current design status and design trend of fuel injectors for jet engines p 33 A88-13076

DETECTION

Evaluation of a dual processor implementation for a fault inferring nonlinear detection system [AIAA PAPER 87-2762] p 59 A88-12532
Optimal detection of sensor failures in flight control systems using deterministic observers p 38 A88-10803

DETERMINANTS

Optimal detection of sensor failures in flight control systems using deterministic observers p 38 A88-10803

DEVIATION

The deviation of light rays passing through a curved windscreens --- aircraft [BAE-MS-115] p 62 A88-10610

DIESEL FUELS

Combustion gas properties. III - Prediction of the thermodynamic properties of combustion gases of aviation and diesel fuels [ASME PAPER 87-GT-49] p 40 A88-11001

DIFFRACTION

The deviation of light rays passing through a curved windscreens --- aircraft [BAE-MS-115] p 62 A88-10610

DIFFUSERS

Combustor-diffuser interaction program p 35 A88-11152

DIFFUSION

A method for calculating turbulent boundary layers and losses in the flow channels of turbomachines [ASME PAPER 87-GT-225] p 7 A88-11121

DIFFUSION THEORY

Applicability of a diffusion combustion model to the analysis of supersonic turbulent reacting jets p 40 A88-10180

DIGITAL COMPUTERS

Development and trends in radio position finding p 20 A88-10680
Reliability modeling of fault-tolerant computer based systems p 37 A88-10801

DIGITAL ELECTRONICS

Digital controls for gas turbine engines [ASME PAPER 87-GT-211] p 31 A88-11111

DIGITAL FILTERS

Hybrid positioning and navigation systems - Technological status and development trends in position-finding and navigation procedures p 20 A88-10684

DIGITAL NAVIGATION

Development and trends in radio position finding p 20 A88-10680

DIGITAL SYSTEMS

Digital system bus integrity [NASA-CR-181446] p 28 A88-10030
Reliability modeling of fault-tolerant computer based systems p 37 A88-10801

DIGITAL TECHNIQUES

Softcopy versus hardcopy --- digital image displays for aerial reconnaissance p 27 A88-12750

DILUTION

Dilution jet mixing program, phase 3 p 54 A88-11153

DIRECTION FINDING

Development and trends in radio position finding p 20 A88-10680
Hybrid positioning and navigation systems - Technological status and development trends in position-finding and navigation procedures p 20 A88-10684

DISPLAY DEVICES

An integrated display for vertical situation awareness in commercial transport aircraft [SAE PAPER 861770] p 57 A88-10158
The advantage of flightpath-oriented situation displays during microburst encounters [SAE PAPER 861733] p 35 A88-10164
Color display technology - An overview [SAE PAPER 861692] p 43 A88-10170
Perspective traffic display format and airline pilot traffic avoidance p 58 A88-12639
Sensor control/data display set (SC/DDS) for film and/or electro optics (EO) p 26 A88-12731
Softcopy versus hardcopy --- digital image displays for aerial reconnaissance p 27 A88-12750
Color display programming for aviation [DFVLR-MITT-87-03] p 28 A88-10031
Fiber optic engineering sensor system. Preliminary program management plan, phase 3 revision [AD-A183663] p 62 A88-10608

DISTRIBUTED PARAMETER SYSTEMS

Stability of supersonic flow of an ideal gas with a head shock wave past cylindrical channels and cavities p 13 A88-12065

DOMAINS

Syntheses of reduced-order controllers for active flutter suppression p 35 A88-10095

DRAG DEVICES

Pressure field due to drag reducing outer layer devices in turbulent boundary layers p 3 A88-10492

DRAG REDUCTION

Pressure field due to drag reducing outer layer devices in turbulent boundary layers p 3 A88-10492
Transonic analysis and design of axisymmetric bodies in nonuniform flow [NASA-CR-4101] p 16 A88-10013

DRONE AIRCRAFT

Towards the unmanned cockpit p 25 A88-10812

DUCTED FLOW

Parabolized Navier-Stokes analysis of ducted supersonic combustion problems p 2 A88-10361
Experimental method for the combustion efficiency calculation in a reheat duct [ASME PAPER 87-GT-90] p 29 A88-11029

DYNAMIC LOADS

Possibilities for the modeling of dynamically loaded cylindrical structural parts in the wind tunnel [KU-SFB-210/T/24] p 15 A88-10005

DYNAMIC RESPONSE

On predicting the resonant response of bladed disk assemblies [ASME PAPER 87-GT-158] p 30 A88-11070
Investigation of interactions between limb-manipulator dynamics and effective vehicle roll control characteristics [NASA-CR-3983] p 36 A88-10039
Blade loss transient dynamics analysis, volume 1. Task 2: TETRA 2 theoretical development [NASA-CR-179632] p 34 A88-10791
Blade loss transient dynamics analysis, volume 2. Task 2: TETRA 2 user's manual [NASA-CR-179633] p 34 A88-10792
AGARD standard aeroelastic configurations for dynamic response. Candidate configuration 1-wing 445.6 [NASA-TM-100492] p 56 A88-11202

E

ECHO SOUNDING

Detection of targets in the presence of clutter using target echo modulations caused by rotating structures [REPT-12-86] p 50 A88-10231

EDDY VISCOSITY

The design of shock-free compressor cascades including viscous boundary layer effects [ASME PAPER 87-GT-71] p 4 A88-11015

EFFICIENCY

Impact of turbulence modeling on numerical accuracy and efficiency of compressible flow simulations [NASA-TM-88333] p 52 A88-11088

EJECTORS

Similarity of ejector wall-pressure distributions p 49 A88-12294

ELASTIC BUCKLING

Elastic buckling of internally pressurized cylinder-bulkhead combinations p 50 A88-12949

ELASTIC DEFORMATION

Numerical solution of coupled problems of supersonic flow past deformable shells of finite thickness p 13 A88-11280

ELASTIC PROPERTIES

Problems in continuum mechanics with mixed boundary conditions --- Russian book p 43 A88-10017

ELECTRIC CONNECTORS

Design principles and practices for implementation of MIL-STD-1760 in aircraft and stores [AD-A183724] p 24 A88-10027

ELECTRIC EQUIPMENT

Testing of aircraft electrical equipment --- Russian book p 39 A88-10044

ELECTRIC GENERATORS

Force commutated direct frequency changers for aerospace power applications p 48 A88-11825

ELECTRIC NETWORKS

Design principles and practices for implementation of MIL-STD-1760 in aircraft and stores [AD-A183724] p 24 A88-10027

ELECTRICAL RESISTANCE

The development of a high temperature static strain gage system p 53 A88-11142

ELECTRO-OPTICS

Sensor control/data display set (SC/DDS) for film and/or electro optics (EO) p 26 A88-12731
Real-time reconnaissance - An engineering perspective p 21 A88-12733
Datalink design trade-offs for electro-optical reconnaissance systems p 27 A88-12740
Arguments for electro-optical reconnaissance systems p 27 A88-12749

ELECTROMAGNETISM

Process support compressor motor electromagnetic design summary [DE87-014359] p 52 A88-11048

ELECTROMAGNETS

Process support compressor motor electromagnetic design summary [DE87-014359] p 52 A88-11048

ELECTRONIC CONTROL

The impact of modern technology on aircraft avionics equipment p 26 A88-10679
Digital controls for gas turbine engines [ASME PAPER 87-GT-211] p 31 A88-11111

ELECTRONIC COUNTERMEASURES

FDAD - A lab/field test tool --- Flight Data Analysis and Display p 25 A88-10436

ELLIPSES

Exact and asymptotic expressions of the lift slope coefficient of an elliptic wing p 14 A88-12292

ELLIPTIC DIFFERENTIAL EQUATIONS

Shock embedding discontinuous solution of elliptic equation for inverse problem of transonic S2 flow [ASME PAPER 87-GT-115] p 5 A88-11043

EMBEDDED COMPUTER SYSTEMS

Avionics, artificial intelligence, and embedded processing systems [AIAA PAPER 87-2818] p 59 A88-12558

ENCLOSURES

The use of Kevlar on aero-engine fan containment casings [PNR90410] p 53 A88-11134

ENERGY CONSERVATION

Cost savings possible with Air Force conversion to JP-8 as its primary fuel [AD-A183784] p 42 A88-10192

ENERGY CONVERSION EFFICIENCY

Combustion gas properties. III - Prediction of the thermodynamic properties of combustion gases of aviation and diesel fuels [ASME PAPER 87-GT-49] p 40 A88-11001

ENERGY TRANSFER

Momentum exchanges and energy transfers in cross flow fans [ASME PAPER 87-GT-32] p 44 A88-10992

Effect of energy release in the shock layer on the supersonic flight of bodies p 13 A88-12073

ENGINE AIRFRAME INTEGRATION

Transonic analysis and design of axisymmetric bodies in nonuniform flow [NASA-CR-4101] p 16 A88-10013

ENGINE CONTROL

- Investigation of integrated selection of optimum engine cycle parameters
[ASME PAPER 87-GT-39] p 29 A88-10993
- Conceptual design of an optic based engine control system
[ASME PAPER 87-GT-168] p 30 A88-11079
- Digital controls for gas turbine engines
[ASME PAPER 87-GT-211] p 31 A88-11111
- HIDEC adaptive engine control system flight evaluation results
[ASME PAPER 87-GT-257] p 32 A88-11137

ENGINE DESIGN

- Analytical study of swirler effects in annular propulsive nozzles p 28 A88-10362
- Multimodes to Mach 5 p 28 A88-10371
- Development of the XF3-30 turbofan engine
[ASME PAPER 87-GT-26] p 28 A88-10988
- Development of ceramic hot section components for AGT 100 gas turbine
[ASME PAPER 87-GT-79] p 45 A88-11019
- Off-design performance of supersonic compressors with fixed and variable geometry p 5 A88-11044
- [ASME PAPER 87-GT-116] p 5 A88-11044
- A discussion of the mean S2 stream surfaces applied to quasi-three-dimensional calculation programs for turbomachinery design p 5 A88-11067
- [ASME PAPER 87-GT-150] p 5 A88-11067
- Development of the AGT101 regenerator seals
[ASME PAPER 87-GT-173] p 46 A88-11083
- AGT101 - Ceramic gas turbine development
[ASME PAPER 87-GT-228] p 32 A88-11122
- An improved Stirling engine for model aircraft propulsion p 33 A88-11976
- The scramjet - Toward Mach 4-25 flight p 33 A88-13095
- First article test noise survey of the A/F32T-9 large turbo fan engine enclosed noise suppressor system, Sky Harbor IAP (International Airport), Phoenix, Arizona
[AD-A183799] p 61 A88-10588
- The wide chord fan blade: A Rolls Royce first
[PNR90416] p 34 A88-10789
- Turbines with counterrotating runners for aircraft power plants p 34 A88-10992
- Transmission efficiency in advanced aerospace powerplant
[PNR90391] p 53 A88-11133

ENGINE FAILURE

- A natural low frequency oscillation in the wake of an airfoil near stalling conditions
[NASA-TM-100213] p 18 A88-10779

ENGINE INLETS

- The aeromechanical response of an advanced transonic compressor to inlet distortion
[ASME PAPER 87-GT-189] p 31 A88-11094
- Boundary layer profile investigations downstream of an aero-engine intake anti-icing air exhaust slot
[PNR90378] p 52 A88-11080

ENGINE MONITORING INSTRUMENTS

- Introduction and application of the General Electric turbine engine monitoring software within KLM Royal Dutch Airlines
[ASME PAPER 87-GT-167] p 30 A88-11078

ENGINE NOISE

- Advanced turboprop wing installation effects measured by unsteady blade pressure and noise
[NASA-TM-100200] p 15 A88-10008
- First article test noise survey of the A/F32T-9 large turbo fan engine enclosed noise suppressor system, Sky Harbor IAP (International Airport), Phoenix, Arizona
[AD-A183799] p 61 A88-10588
- Noise emission of civil and military aero-engines. Sources of generation and measures for attenuation
[ETN-87-91021] p 62 A88-10595

ENGINE PARTS

- Development of ceramic hot section components for AGT 100 gas turbine
[ASME PAPER 87-GT-79] p 45 A88-11019
- Numerical solution of three-dimensional turbulent flows for modern gas turbine components
[ASME PAPER 87-GT-84] p 4 A88-11024
- Development of the AGT101 regenerator seals
[ASME PAPER 87-GT-173] p 46 A88-11083
- AGT101 - Ceramic gas turbine development
[ASME PAPER 87-GT-228] p 32 A88-11122
- Development of a statistically proven injection molding method for reaction bonded silicon nitride, sintering reaction bonded silicon nitride, and sintered silicon nitride
[ETN-87-90575] p 52 A88-11002
- Investment foundry melting stock. Rolls Royce requirements and demands in terms of quality and the relationship to end product performance
[PNR90397] p 52 A88-11003
- High temperature stress-strain analysis p 55 A88-11170

ENGINE STARTERS

- Starting system for cold weather p 23 A88-10871

ENGINE TESTS

- Development of the XF3-30 turbofan engine
[ASME PAPER 87-GT-26] p 28 A88-10988
- Velocity scaled aeroelastic testing of advanced turboprops
[ASME PAPER 87-GT-209] p 31 A88-11110
- AGT101 - Ceramic gas turbine development
[ASME PAPER 87-GT-228] p 32 A88-11122
- Cyclic spinning testing of aero-engine discs
[ASME PAPER 87-GT-259] p 32 A88-11139
- Diagnosis of flow channel in aircraft gas-turbine engines on basis of vibration spectrum characteristics p 35 A88-10993

EQUATIONS OF MOTION

- On predicting the resonant response of bladed disk assemblies
[ASME PAPER 87-GT-158] p 30 A88-11070
- Unified equation of motion (UEM) approach as applied to S1 turbomachinery problems
[ASME PAPER 87-GT-179] p 6 A88-11087
- A mathematical multi-point model for aircraft motion in moving air p 36 A88-12487
- Decoupling and stabilization of speed and height in F4 Phantom aircraft using output feedback
[ETN-87-90926] p 25 A88-10787

EROSIVE BURNING

- Computer predictions of erosion damage in gas turbines
[ASME PAPER 87-GT-127] p 46 A88-11054

ERROR ANALYSIS

- Some approaches to the design of high integrity software p 37 A88-10799

EULER EQUATIONS OF MOTION

- Explicit multigrid algorithm for quasi-three-dimensional viscous flows in turbomachinery p 2 A88-10355
- Multigrid solution of the Euler equations on unstructured and adaptive meshes p 44 A88-10570
- Computation of transonic separated wing flows using an Euler/Navier-Stokes zonal approach
[NASA-TM-88311] p 52 A88-11089

EUROPEAN AIRBUS

- Assessment of software quality for the AIRBUS A310 automatic pilot p 38 A88-10804

EUROPEAN SPACE PROGRAMS

- Aerospace research at the National Aerospace Laboratory (NLR)
[ETN-87-90821] p 62 A88-10697

EVALUATION

- Assessment of software quality for the AIRBUS A310 automatic pilot p 38 A88-10804

EXHAUST DIFFUSERS

- A trade-off study of rotor tip clearance flow in a turbine/exhaust diffuser system
[ASME PAPER 87-GT-229] p 32 A88-11123

EXHAUST GASES

- Combustion gas properties. III - Prediction of the thermodynamic properties of combustion gases of aviation and diesel fuels
[ASME PAPER 87-GT-49] p 40 A88-11001
- Prediction of NO and CO distribution in gas turbine combustors
[ASME PAPER 87-GT-63] p 41 A88-11010
- Boundary layer profile investigations downstream of an aero-engine intake anti-icing air exhaust slot
[PNR90378] p 52 A88-11080

EXHAUST SYSTEMS

- Gas turbine exhaust systems - Design considerations
[ASME PAPER 87-GT-238] p 32 A88-11128

EXPERIMENT DESIGN

- Experimental method for the combustion efficiency calculation in a reheat duct
[ASME PAPER 87-GT-90] p 29 A88-11029

EXPERT SYSTEMS

- Towards the design of an intelligent aerospace system
[AIAA PAPER 87-2844] p 26 A88-12569
- Expert system control for airborne radar surveillance

- Prediction of turbine blade heat transfer p 54 A88-11162
- Flow in a model turbine stator p 55 A88-11163
- Component specific modeling p 60 A88-11166

HEAT TRANSFER COEFFICIENTS

- Use of a liquid-crystal and heater-element composite for quantitative, high-resolution heat-transfer coefficients on a turbine airfoil including turbulence and surface-roughness effects p 44 A88-10969
- Application of the transient test technique to measure local heat transfer coefficients associated with augmented airfoil cooling passages
[ASME PAPER 87-GT-212] p 47 A88-11112
- Heat transfer with very high free stream turbulence p 54 A88-11161

HEAT TRANSMISSION

- Time-averaged heat-flux distributions and comparison with prediction for the Teledyne 702 HP turbine stage
[ASME PAPER 87-GT-120] p 30 A88-11048

HELICOPTER DESIGN

- New Soviet helicopter technology and its potential for industrial use p 1 A88-10657
- Anti-tank helicopters for the rich and not so rich p 1 A88-10877
- Composite directions at Kaman p 41 A88-12414
- Prepare for the 21st century - The 1987 Alexander A. Nikolsky Lecture --- examples of future design possibilities of helicopters p 24 A88-12645
- Integration of dynamic, aerodynamic and structural optimization of helicopter rotor blades
[NASA-CR-181441] p 16 A88-10012

HELICOPTER PERFORMANCE

- New Soviet helicopter technology and its potential for industrial use p 1 A88-10657
- An observer approach to the estimation of helicopter airspeed
[DFVLR-FB-87-13] p 25 A88-10029

HELICOPTERS

- Aircraft acoustics I - Exterior noise of subsonic passenger aircraft and helicopters --- Russian book p 61 A88-10047
- Building on a successful tradition - Composites at MDHC p 41 A88-12415
- Flight test results for a GPS receiver in a helicopter and a business aircraft p 22 A88-13094
- Detection of targets in the presence of clutter using target echo modulations caused by rotating structures
[REPT-12-86] p 50 A88-10231
- Analytical modeling of helicopter static and dynamic induced velocity in GRASP
[NASA-TM-100026] p 18 A88-10777
- Global positioning satellite-based automatic landing system and wind estimated feedback for the AH-64 helicopter p 22 A88-10784
- Improved oil-off survivability of tapered roller bearings
[NASA-CR-180804] p 53 A88-11135
- Helicopter main-rotor speed effects on far-field acoustic levels
[NASA-TM-100512] p 62 A88-11451

HEURISTIC METHODS

- An expert system for aircraft conflict resolution in dense airspace p 22 A88-10810

HIGH ALTITUDE

- Investigation of high-altitude ignition performance of several Chinese jet fuels with different properties
[ASME PAPER 87-GT-178] p 41 A88-11086

HIGH REYNOLDS NUMBER

- The effect of grit roughness on the performance of the Wortmann FX63-137 airfoil at a chord Reynolds number of 100,000 p 11 A88-11202
- Selection of aerofoil sections for use in man-powered aircraft p 12 A88-11207
- Wall interference tests of a CAST 10-2/DOA 2 airfoil in an adaptive-wall test section
[NASA-TM-4015] p 18 A88-10772

HIGH STRENGTH ALLOYS

- Conference on Mechanical Behaviour of Superalloys, London, England, June 10, 11, 1986, Selected Papers p 42 A88-12626
- Developments in disc materials --- for gas turbine engines p 42 A88-12632

HIGH STRENGTH STEELS

- The fatigue properties of aerospace steels under constant amplitude and flight-by-flight simulated loading
[BAE-MSM-R-GEN-0566] p 51 A88-10377

HIGH TEMPERATURE

- High temperature metal matrix composites for future aerospace systems
[NASA-TM-100212] p 43 A88-10938
- High temperature stress-strain analysis p 55 A88-11170
- Elevated temperature crack growth p 55 A88-11174

HIGH TEMPERATURE GASES

- Analysis of supersonic heterogeneous flow impinging on an obstacle p 14 A88-12074

HIGHLY MANEUVERABLE AIRCRAFT

- HIMAT flight program: Test results and program assessment overview
[NASA-TM-86725] p 24 A88-10026

HISTORIES

The history of aeroelasticity research in Germany from the beginning until 1945 --- airframes
[DFVLR-MITT-86-25] p 1 N88-10003

HOLE GEOMETRY (MECHANICS)

Film cooling of a turbine blade with injection through two rows of holes in the near-endwall region
[ASME PAPER 87-GT-196] p 47 A88-11100

HOLOGRAPHIC INTERFEROMETRY

Development and implementation of an aerodynamic holographic interferometry system p 49 A88-12725
Optical flow diagnostic measurements in turbomachinery
[PNR90396] p 52 N88-11081

HORIZONTAL TAIL SURFACES

Advanced composite horizontal stabilizer for next-generation commercial aircraft p 24 A88-13081

HOT CORROSION

Pack cementation coatings for superalloys - A review of history, theory, and practice
[ASME PAPER 87-GT-50] p 41 A88-11002
Experimental verification of vapor deposition rate theory in high velocity burner rigs p 43 N88-11179

HOVERING

Detection of targets in the presence of clutter using target echo modulations caused by rotating structures [REPT-12-86] p 50 N88-10231

HYBRID NAVIGATION SYSTEMS

Hybrid positioning and navigation systems - Technological status and development trends in position-finding and navigation procedures p 20 A88-10684
Optimal information processing for sensors and sensor systems - The case of radar sensors p 26 A88-10685
A hybrid navigation system with GPS p 21 A88-13087
GPS/INS hybrid navigation for aircraft p 22 A88-13090

HYDRODYNAMICS

Problems in continuum mechanics with mixed boundary conditions --- Russian book p 43 A88-10017

HYDROGEN-BASED ENERGY

Hydrogen in air transportation - Feasibility study for Zurich Airport, Switzerland p 41 A88-11146

HYPERSONIC FLIGHT

An Orient Express to capture the market p 1 A88-10370
Multimodes to Mach 5 p 28 A88-10371
The scramjet - Toward Mach 4-25 flight p 33 A88-13095

HYPERSONIC FLOW

The aerothermodynamic environment for holes in hypersonic configurations
[DE87-014651] p 17 N88-10767

HYPERSONIC VEHICLES

The aerothermodynamic environment for holes in hypersonic configurations
[DE87-014651] p 17 N88-10767

HYPERVELOCITY WIND TUNNELS

Experience about the application and valuation of roughness strips for boundary layer transition control in wind tunnel tests in the high-speed range
[ESA-TT-1028] p 51 N88-10278

ICE FORMATION

The dependence of the normalized ice accretion thickness on cloud-physical parameters
[DFVLR-FB-87-08] p 57 N88-10464

ICE PREVENTION

Boundary layer profile investigations downstream of an aero-engine intake anti-icing air exhaust slot
[PNR90378] p 52 N88-11080

IDEAL GAS

Stability of supersonic flow of an ideal gas with a head shock wave past cylindrical channels and cavities p 13 A88-12065
Optimal lifting wings with required longitudinal balancing characteristics p 14 A88-12075

IGNITION

Investigation of high-altitude ignition performance of several Chinese jet fuels with different properties
[ASME PAPER 87-GT-178] p 41 A88-11086

IMAGE PROCESSING

Recent developments in infrared data processing p 28 A88-12751
A compact high performance thermal imager p 50 A88-12843

IMAGING TECHNIQUES

Magnetic recording for near real time reconnaissance applications p 27 A88-12736
Imaging through the atmosphere for airborne reconnaissance p 27 A88-12748

Arguments for electro-optical reconnaissance systems p 27 A88-12749

IMPACT TESTS

Full-scale transport controlled impact demonstration program
[NASA-TM-89642] p 19 N88-10021

IMPINGEMENT

Computer predictions of erosion damage in gas turbines
[ASME PAPER 87-GT-127] p 46 A88-11054

IN-FLIGHT MONITORING

Flight characteristics of aircraft with gas-turbine engines --- Russian book p 23 A88-10049
FDAD - A lab/field test tool --- Flight Data Analysis and Display p 25 A88-10436
Implementation of a research prototype onboard fault monitoring and diagnosis system
[AIAA PAPER 87-2777] p 59 A88-12540

INCIDENCE

Experimental study of three-dimensional separated flow surrounding a hemisphere-cylinder at incidence
[AIAA PAPER 87-2492] p 3 A88-10498

INCOMPRESSIBLE FLOW

A numerical method for subsonic unsteady lifting surfaces - BIS. III - Some additional numerical results p 2 A88-10093
A new method of calculating optimum velocity distribution along the blade surface on arbitrary stream surface of revolution in turbomachines
[ASME PAPER 87-GT-30] p 4 A88-10991
Numerical prediction of turbulent flow in rotating cavities
[ASME PAPER 87-GT-74] p 45 A88-11018
Unified equation of motion (UEM) approach as applied to S1 turbomachinery problems
[ASME PAPER 87-GT-179] p 6 A88-11087

INDUCTION MOTORS

Process support compressor motor electromagnetic design summary
[DE87-014359] p 52 N88-11048

INDUSTRIES

New Soviet helicopter technology and its potential for industrial use p 1 A88-10657

INELASTIC STRESS

Constitutive modeling of superalloy single crystals with verification testing p 43 N88-11169

INERTIA

Effect of fluid inertia on the performance of squeeze film damper supported rotors
[ASME PAPER 87-GT-220] p 48 A88-11117

INERTIAL NAVIGATION

Inertial navigation - Technological status and development trends p 20 A88-10682
GPS/INS hybrid navigation for aircraft p 22 A88-13090
Test equipment with fiber optic data bus and laser gyro strapdown system LTN-90 for the helicopter BO-105
[ESA-TT-1038] p 22 N88-10025

INFORMATION DISSEMINATION

Development studies of a European data network for acquisition, processing, and display of air-traffic data p 21 A88-10688

INFORMATION SYSTEMS

Traditional versus rule-based programming techniques - Application to the control of optional flight information p 58 A88-10965

INFRARED DETECTORS

Test of IR arrays on the Kuiper Airborne Observatory p 49 A88-12838
An uncooled linescan thermal imager for ground and airborne use p 49 A88-12840

INFRARED IMAGERY

Recent developments in infrared data processing p 28 A88-12751
An uncooled linescan thermal imager for ground and airborne use p 49 A88-12840
A compact high performance thermal imager p 50 A88-12843

INFRARED SIGNATURES

Plume infrared signature measurements and comparison with a theoretical model --- of turbo shaft engines p 33 A88-12836

INJECTION MOLDING

Development of a statistically proven injection molding method for reaction bonded silicon nitride, sintering reaction bonded silicon nitride, and sintered silicon nitride
[ETN-87-90575] p 52 N88-11002

INJECTORS

Fuel-injector/air-swirl characterization p 54 N88-11150

INLET FLOW

Combustor-diffuser interaction program p 35 N88-11152

INSTALLING

Advanced turboprop wing installation effects measured by unsteady blade pressure and noise
[NASA-TM-100200] p 15 N88-10008

INTEGRALS

Elevated temperature crack growth p 55 N88-11174

INTERACTIONAL AERODYNAMICS

Navier-Stokes simulations of rotor/stator interaction using patched and overlaid grids p 2 A88-10354
Time-averaged heat-flux distributions and comparison with prediction for the Teledyne 702 HP turbine stage
[ASME PAPER 87-GT-120] p 30 A88-11048
The calculation of flow about aerofoils at low Reynolds number with application to remotely piloted vehicles p 11 A88-11197
Viscid/inviscid interaction analysis of subsonic turbulent trailing-edge flows p 14 A88-12282

INTERMETALLICS

High temperature metal matrix composites for future aerospace systems
[NASA-TM-100212] p 43 N88-10938

INTERNAL PRESSURE

Elastic buckling of internally pressurized cylinder-bulkhead combinations p 50 A88-12949

INTERNATIONAL COOPERATION

The will to European unity as exemplified by A320 p 23 A88-10659
Development studies of a European data network for acquisition, processing, and display of air-traffic data p 21 A88-10688

INVESTMENT CASTING

Investment foundry melting stock. Rolls Royce requirements and demands in terms of quality and the relationship to end product performance
[PNR90397] p 52 N88-11003

INVISID FLOW

Explicit multigrid algorithm for quasi-three-dimensional viscous flows in turbomachinery p 2 A88-10355
Shock embedding discontinuous solution of elliptic equation for inverse problem of transonic S2 flow
[ASME PAPER 87-GT-115] p 5 A88-11043
A discussion of the mean S2 stream surfaces applied to quasi-three-dimensional calculation programs for turbomachinery design
[ASME PAPER 87-GT-150] p 5 A88-11067
Numerical computation of non-isentropic potential equations for transonic cascade flows
[ASME PAPER 87-GT-159] p 5 A88-11071
The base pressure and loss of a family of four turbine blades
[ASME PAPER 87-GT-202] p 7 A88-11106
An analysis of unsteady, two-dimensional separation bubbles p 9 A88-11182
The calculation of flow about aerofoils at low Reynolds number with application to remotely piloted vehicles p 11 A88-11197
Transonic expansions p 13 A88-12059
Refined numerical solution of the transonic flow past a wedge p 14 A88-12280

ISOTHERMAL FLOW

Numerical prediction of turbulent flow in rotating cavities
[ASME PAPER 87-GT-74] p 45 A88-11018

ITERATIVE SOLUTION

Initial user experience with an artificial intelligence program for the preliminary design of centrifugal compressors
[ASME PAPER 87-GT-217] p 58 A88-11115

J**JET AIRCRAFT**

The Antonov An-74 brings high tech to low temperatures p 23 A88-10876
Effect of empennage arrangement on single-engine nozzle/body static pressures at transonic speeds
[NASA-TP-2753] p 17 N88-10771

JET ENGINE FUELS

Investigation of high-altitude ignition performance of several Chinese jet fuels with different properties
[ASME PAPER 87-GT-178] p 41 A88-11086

JET ENGINES

Off-design performance of supersonic compressors with fixed and variable geometry p 5 A88-11044
First article test noise survey of the A/F32T-9 large turbo fan engine enclosed noise suppressor system, Sky Harbor IAP (International Airport), Phoenix, Arizona
[AD-A183799] p 61 N88-10588
Effect of empennage arrangement on single-engine nozzle/body static pressures at transonic speeds
[NASA-TP-2753] p 17 N88-10771

- The use of Kevlar on aero-engine fan containment casings
[PNR90410] p 53 N88-11134
- JET MIXING FLOW**
Dilution jet mixing program, phase 3 p 54 N88-11153
- On the mixing of a row of jets with a confined crossflow p 54 N88-11154
- JP-8 JET FUEL**
Cost savings possible with Air Force conversion to JP-8 as its primary fuel
[AD-A183784] p 42 N88-10192

K

- KALMAN FILTERS**
Hybrid positioning and navigation systems - Technological status and development trends in position-finding and navigation procedures p 20 A88-10684
- KERNEL FUNCTIONS**
A numerical method for subsonic unsteady lifting surfaces - BIS. III - Some additional numerical results p 2 A88-10093
- KEROSENE**
Prediction of combustion performance of aviation kerosines using a novel premixed flame technique
[ASME PAPER 87-GT-125] p 41 A88-11052
- KEVLAR (TRADEMARK)**
The use of Kevlar on aero-engine fan containment casings
[PNR90410] p 53 N88-11134
- KINETIC ENERGY**
Force commutated direct frequency changers for aerospace power applications p 48 A88-11825
- KNOWLEDGE**
Towards the unmanned cockpit p 25 N88-10812

L

- LABORATORIES**
The Lewis Strain Gauge Laboratory: Status and plans p 54 N88-11146
- LABYRINTH SEALS**
Labyrinth seal flow measurement by tracer gas injection
[ASME PAPER 87-GT-187] p 47 A88-11092
- LAMINAR BOUNDARY LAYER**
A smoke-wire study of low Reynolds number flow over a NASA LRN(1) - 1007 airfoil section p 9 A88-11181
Transition and separation control on a low-Reynolds number airfoil p 9 A88-11186
Smoke-wire and thin-film-gauge observations of laminar separation bubbles on an NACA 23012-64 airfoil section p 13 A88-11210
- LAMINAR FLOW**
On massive laminar separation and lift anomalies in subcritical Re-range p 8 A88-11178
A simple method for the prediction of separation bubble formation on aerofoils at low Reynolds number p 8 A88-11179
A theoretical study of spanwise-periodic 3-D disturbances in the wake of a slightly stalled wing at low Reynolds numbers p 8 A88-11180
Low Reynolds number airfoil design at the Douglas Aircraft Company p 9 A88-11183
Observations and analyses of natural laminar flow over a nonlifting airframe surface
[SAE PAPER 871020] p 15 A88-13096
- LAMINAR FLOW AIRFOILS**
Wind-tunnel investigation of a full-scale general aviation airplane equipped with an advanced natural laminar flow wing
[NASA-TP-2772] p 16 N88-10009
- LANDING GEAR**
Some topics on aircraft landing gear design p 24 A88-13085
- LASER ANEMOMETERS**
Characterization of shock wave end wall boundary layer interactions in a transonic compressor rotor
[ASME PAPER 87-GT-166] p 6 A88-11077
Optical flow diagnostic measurements in turbomachinery
[PNR90396] p 52 N88-11081
- LASER APPLICATIONS**
NDE at twelve o'clock high p 48 A88-11585
- LASER DOPPLER VELOCIMETERS**
Comparison of predicted and measured velocities in a compressor disk drum model
[ASME PAPER 87-GT-208] p 47 A88-11109
Inter and intra blade row laser velocimetry studies of gas turbine compressor flows
[ASME PAPER 87-GT-235] p 7 A88-11126

- Airspeed measurement with a CO2 lidar p 26 A88-12655
- LASER GYROSCOPES**
Test equipment with fiber optic data bus and laser gyro strapdown system LTN-90 for the helicopter BO-105
[ESA-TT-1038] p 22 N88-10025
- LASER INTERFEROMETRY**
Optical flow diagnostic measurements in turbomachinery
[PNR90396] p 52 N88-11081
- LATERAL CONTROL**
Design study for an FBW lateral control system p 36 A88-13080
Investigation of interactions between limb-manipulator dynamics and effective vehicle roll control characteristics
[NASA-CR-3983] p 36 N88-10039
A preliminary investigation into the feasibility of implementing a direct sideforce control system on the Astra Hawk by means of an active control surface --- aircraft control
[ETN-87-90924] p 37 N88-10795
- LEADING EDGES**
Boundary layer profile investigations downstream of an aero-engine intake anti-icing air exhaust slot
[ASME PAPER 87-GT-237] p 32 A88-11127
The structure of separated flow regions occurring near the leading edge of airfoils including transition
[NASA-CR-181434] p 16 N88-10011
- LIFE (DURABILITY)**
A qualitative method for determining the temperature pattern of run gas turbine blades
[ASME PAPER 87-GT-102] p 45 A88-11037
Life prediction and constitutive models for engine hot section anisotropic materials program p 56 N88-11175
Thermal barrier coating life prediction model p 56 N88-11183
Thermal barrier coating life prediction model p 56 N88-11185
- LIFE CYCLE COSTS**
Applied reliability/maintainability methodology as a function within life cycle cost --- of aircraft turbine engine
[ASME PAPER 87-GT-172] p 46 A88-11082
- LIFT**
On massive laminar separation and lift anomalies in subcritical Re-range p 8 A88-11178
Exact and asymptotic expressions of the lift slope coefficient of an elliptic wing p 14 A88-12292
On the prospects for increasing dynamic lift
[RAE-TM-AERO-2068] p 17 N88-10018
- LIFT AUGMENTATION**
On the prospects for increasing dynamic lift
[RAE-TM-AERO-2068] p 17 N88-10018
- LIFT DEVICES**
High-lift-device design and low-speed wind-tunnel test p 15 A88-13079
- LIFTING BODIES**
A numerical method for subsonic unsteady lifting surfaces - BIS. III - Some additional numerical results p 2 A88-10093
- LIGHT AIRCRAFT**
Recent wind tunnel experiments at low Reynolds numbers p 11 A88-11193
Prediction of a microlight biplane's aerofoil performance using a computer model p 11 A88-11198
Selection of aerofoil sections for use in man-powered aircraft p 12 A88-11207
- LIGHT BEAMS**
The deviation of light rays passing through a curved windscreen --- aircraft
[BAE-MS-C.115] p 62 N88-10610
- LINEAR ARRAYS**
An uncooled linescan thermal imager for ground and airborne use p 49 A88-12840
- LINEAR FILTERS**
Fast stable solution of a dispersion equation of linear filtering --- for flight vehicle radar system p 21 A88-10728
- LINEAR QUADRATIC REGULATOR**
The design of a turboshaft speed governor using modern control techniques
[NASA-CR-175046] p 51 N88-10339
- LININGS**
Turbine Engine Hot Section Technology, 1985
[NASA-CP-2405] p 53 N88-11140
- LIQUID CRYSTALS**
Use of a liquid-crystal and heater-element composite for quantitative, high-resolution heat-transfer coefficients on a turbine airfoil including turbulence and surface-roughness effects p 44 A88-10969
- LIQUID HYDROGEN**
Hydrogen in air transportation - Feasibility study for Zurich Airport, Switzerland p 41 A88-11146

LOSSES

- Blade loss transient dynamics analysis, volume 1. Task 2: TETRA 2 theoretical development
[NASA-CR-179632] p 34 N88-10791
Blade loss transient dynamics analysis, volume 2. Task 2: TETRA 2 user's manual
[NASA-CR-179633] p 34 N88-10792
- LOW ALTITUDE**
B-18 combines brisk low-altitude handling, more capable avionics p 23 A88-10675
Dispersion in the wake of aircraft: An investigation of the effects of a ground plane on trailing vortices. Literature survey
[IC-AERO-REP-86-04] p 16 N88-10014
- LOW ASPECT RATIO WINGS**
The flow visualization on the rotary wing with low aspect ratio p 2 A88-10094
- LOW COST**
Low cost windowless cockpit research vehicle
[SAE PAPER 861755] p 39 A88-10156
- LOW REYNOLDS NUMBER**
Prediction of turbulent source flow between corotating disks with an anisotropic two-equation turbulence model
[ASME PAPER 87-GT-73] p 45 A88-11017
Aerodynamics at low Reynolds numbers Re greater than 10 to the 4th and less than 10 to the 6th; Proceedings of the International Conference, London, England, Oct. 15-18, 1986. Volumes 1, 2, & 3 p 8 A88-11176
Aerodynamics at low Reynolds numbers - A review of theoretical and experimental research at Delft University of Technology p 8 A88-11177
A simple method for the prediction of separation bubble formation on aerofoils at low Reynolds number p 8 A88-11179
A theoretical study of spanwise-periodic 3-D disturbances in the wake of a slightly stalled wing at low Reynolds numbers p 8 A88-11180
A smoke-wire study of low Reynolds number flow over a NASA LRN(1) - 1007 airfoil section p 9 A88-11181
An analysis of unsteady, two-dimensional separation bubbles p 9 A88-11182
Low Reynolds number airfoil design at the Douglas Aircraft Company p 9 A88-11183
Boundary layer and performance characteristics from wind tunnel tests of a low Reynolds number Liebeck airfoil p 9 A88-11184
Transition and separation control on a low-Reynolds number airfoil p 9 A88-11186
Control surface effects on the low Reynolds number behavior of the Wortmann FX 63-137 p 10 A88-11187
Recent developments in boundary layer computation p 10 A88-11188
On some unsteady aerodynamics characteristics of an NACA 0012 at Reynolds numbers of 125,000 and 400,000 p 10 A88-11189
Low Reynolds number wind tunnel measurements - The importance of being earnest p 10 A88-11190
Recent developments in the calculation of flow over low Reynolds-number airfoils p 10 A88-11191
On the determination of the 2-D characteristics of aerofoils at low Reynolds numbers p 10 A88-11192
Recent wind tunnel experiments at low Reynolds numbers p 11 A88-11193
Low-Reynolds number aerodynamics research at NASA Langley Research Center p 11 A88-11194
The calculation of flow about aerofoils at low Reynolds number with application to remotely piloted vehicles p 11 A88-11197
International Conference on the Aerodynamics at Low Reynolds Numbers between 10(4) and 10(6)
[ONRL-7-023-C] p 16 N88-10010
- LOW SPEED**
Low altitude/airspeed unmanned research aircraft (LAURA) preliminary development p 12 A88-11205
On the prospects for increasing dynamic lift
[RAE-TM-AERO-2068] p 17 N88-10018
- LOW TEMPERATURE ENVIRONMENTS**
The Antonov An-74 brings high tech to low temperatures p 23 A88-10876
- LUBRICANT TESTS**
Neutron and positron techniques for fluid transfer system analysis and remote temperature and stress measurement
[ASME PAPER 87-GT-219] p 48 A88-11116
- LUBRICATION**
Improved oil-off survivability of tapered roller bearings
[NASA-CR-180804] p 53 N88-11135

M

MACH NUMBER

Initial user experience with an artificial intelligence program for the preliminary design of centrifugal compressors

[ASME PAPER 87-GT-217] p 58 A88-11115

Theoretical and experimental analysis of a compressor cascade at supercritical flow conditions

[ASME PAPER 87-GT-256] p 8 A88-11136

MAGNETIC PROPERTIES

A qualitative method for determining the temperature pattern of run gas turbine blades

[ASME PAPER 87-GT-102] p 45 A88-11037

MAGNETIC RECORDING

Magnetic recording for near real time reconnaissance applications

p 27 A88-12736

MAINTAINABILITY

Electronic trend monitoring and exceedance recording systems - A means to improved turbine engine reliability

[ASME PAPER 87-GT-87] p 29 A88-11027

Applied reliability/maintainability methodology as a function within life cycle cost --- of aircraft turbine engine

[ASME PAPER 87-GT-172] p 46 A88-11082

MAN MACHINE SYSTEMS

Versatile simulation testbed for rotorcraft speech I/O system design

[SAE PAPER 861661] p 57 A88-10154

An integrated display for vertical situation awareness in commercial transport aircraft

[SAE PAPER 861770] p 57 A88-10158

Flying complex approach paths using the microwave landing system

[SAE PAPER 861771] p 35 A88-10159

The advantages of a primary flight display

[SAE PAPER 861730] p 58 A88-10162

The advantage of flightpath-oriented situation displays during microburst encounters

[SAE PAPER 861733] p 35 A88-10164

A rule-based system for arrival sequencing and scheduling in air traffic control

p 22 A88-10815

MAN POWERED AIRCRAFT

Selection of aerofoil sections for use in man-powered aircraft

p 12 A88-11207

MAN-COMPUTER INTERFACE

Intelligent interfaces to aircraft systems

[AIAA PAPER 87-2776] p 59 A88-12539

MANAGEMENT

Issues in air transport and airport management

[PB87-204509] p 19 A88-10782

MANAGEMENT METHODS

Cost savings possible with Air Force conversion to JP-8 as its primary fuel

[AD-A183784] p 42 A88-10192

MANEUVERS

Approach trajectory planning system for maximum concealment

[NASA-TM-88258] p 60 A88-11435

MANIFOLDS

Labyrinth seal flow measurement by tracer gas injection

[ASME PAPER 87-GT-187] p 47 A88-11092

MANUAL CONTROL

Flying complex approach paths using the microwave landing system

[SAE PAPER 861771] p 35 A88-10159

Comparison of programmable legend keyboard and dedicated keyboard for control of the flight management computer

[SAE PAPER 861772] p 57 A88-10160

MANUFACTURING

Pack cementation coatings for superalloys - A review of history, theory, and practice

[ASME PAPER 87-GT-50] p 41 A88-11002

A 1987 progress report of manufacturing techniques for Gravity Probe B gyroscope rotors

[NASA-TM-100312] p 53 A88-11101

MASS BALANCE

Boundary layer profile investigations downstream of an aero-engine intake anti-icing air exhaust slot

[ASME PAPER 87-GT-237] p 32 A88-11127

MASS TRANSFER

Effect of rib angle on local heat/mass transfer distribution in a two-pass rib-roughened channel

[ASME PAPER 87-GT-94] p 45 A88-11033

MATERIALS SCIENCE

Composite directions at Kaman

p 41 A88-12414

Mechanical property requirements for aero gas turbine materials

p 42 A88-12628

MATHEMATICAL MODELS

The accuracy-related parametric reduction of mathematical models

p 58 A88-10929

A model to determine the behaviour of a pressure measurement equipment during non-static operations of gasturbine engines

[ASME PAPER 87-GT-128] p 46 A88-11055

A mathematical multi-point model for aircraft motion in moving air

p 36 A88-12487

Contributions to the modeling of wind shear for danger studies

[ETN-87-90442] p 57 A88-10463

Impact of turbulence modeling on numerical accuracy and efficiency of compressible flow simulations

[NASA-TM-88333] p 52 A88-11088

Turbine Engine Hot Section Technology, 1985

[NASA-CP-2405] p 53 A88-11140

Life prediction and constitutive models for engine hot section anisotropic materials program

p 56 A88-11175

Thermal barrier coating life prediction model development

p 56 A88-11185

Software reliability models for fault-tolerant avionics computers and related topics

[NASA-CR-181440] p 60 A88-11382

MEASURING INSTRUMENTS

A model to determine the behaviour of a pressure measurement equipment during non-static operations of gasturbine engines

[ASME PAPER 87-GT-128] p 46 A88-11055

MECHANICAL PROPERTIES

Conference on Mechanical Behaviour of Superalloys, London, England, June 10, 11, 1986, Selected Papers

p 42 A88-12626

Mechanical property requirements for aero gas turbine materials

p 42 A88-12628

METAL COATINGS

Compressor turbine vane ring (PT6 engine) repair development

[ASME PAPER 87-GT-47] p 29 A88-10999

METAL FATIGUE

Turbine Engine Hot Section Technology, 1985

[NASA-CP-2405] p 53 A88-11140

METAL MATRIX COMPOSITES

High temperature metal matrix composites for future aerospace systems

[NASA-TM-100212] p 43 A88-10938

Composite structural materials

[NASA-CR-181416] p 56 A88-11186

METAL POWDER

Development and production of new and modified powders for sprayed coatings and components for saving important raw materials

[BMFT-FB-T-86-128] p 42 A88-10159

METAL SHEETS

High-temperature sheet materials for gas turbine applications

p 42 A88-12635

METEOROLOGICAL SERVICES

Computing complex for a system for the radio-acoustic sounding of the atmosphere - Hardware facilities

p 58 A88-11394

MICROBURSTS

The advantage of flightpath-oriented situation displays during microburst encounters

[SAE PAPER 861733] p 35 A88-10164

MICROPROCESSORS

Electronic trend monitoring and exceedance recording systems - A means to improved turbine engine reliability

[ASME PAPER 87-GT-87] p 29 A88-11027

The development of 270 Vdc solid state power controllers --- for advanced aircraft electrical systems.

p 33 A88-11923

MICROWAVE LANDING SYSTEMS

Flying complex approach paths using the microwave landing system

[SAE PAPER 861771] p 35 A88-10159

Flight director guidance for MLS

p 21 A88-10874

MILITARY AIRCRAFT

Low cost windowless cockpit research vehicle

[SAE PAPER 861755] p 39 A88-10156

Starting system for cold weather

p 23 A88-10871

The United Kingdom engine technology demonstrator programme

[ASME PAPER 87-GT-203] p 31 A88-11107

Low altitude/airspeed unmanned research aircraft (LAURA) preliminary development

p 12 A88-11205

Composites technology in Army aviation

p 24 A88-12413

Autonomous processing using a blackboard chipset

[AIAA PAPER 87-2855] p 59 A88-12575

MILITARY HELICOPTERS

Anti-tank helicopters for the rich and not so rich

p 1 A88-10877

MILITARY OPERATIONS

Aircraft and equipment factors in the occurrence of suspension line twists with U.S. Army parachutes

p 19 A88-12644

MILITARY TECHNOLOGY

Sensor configuration for a short to medium range reconnaissance pod

p 27 A88-12742

MISSILE SYSTEMS

Evolution and application of CFD techniques for scramjet engine analysis

p 28 A88-10358

MODAL RESPONSE

An optimal control method for passage of a flexible rotor through resonances

p 48 A88-11439

MODELS

Modeling and measurement of heat transfer on turbine blade tips

p 33 A88-10032

Reliability modeling of fault-tolerant computer based systems

p 37 A88-10801

MOMENTUM TRANSFER

Momentum exchanges and energy transfers in cross flow fans

[ASME PAPER 87-GT-32] p 44 A88-10992

MONOTONE FUNCTIONS

Software reliability models for fault-tolerant avionics computers and related topics

[NASA-CR-181440] p 60 A88-11382

MULTIPHASE FLOW

Stability of conical and curved annular diffusers for mixed-flow compressors

[ASME PAPER 87-GT-191] p 6 A88-11096

MULTIPROCESSING (COMPUTERS)

AOSP - Multiprocessor architecture and system considerations

[AIAA PAPER 87-2790] p 59 A88-12544

MUSCULAR FUNCTION

Investigation of interactions between limb-manipulator dynamics and effective vehicle roll control characteristics

[NASA-CR-3983] p 36 A88-10039

N

NAVIER-STOKES EQUATION

Navier-Stokes simulations of rotor/stator interaction using patched and overlaid grids

p 2 A88-10354

Explicit multigrid algorithm for quasi-three-dimensional viscous flows in turbomachinery

p 2 A88-10355

Cascade viscous flow analysis using the Navier-Stokes equations

p 2 A88-10356

Calculation of three-dimensional viscous flows in turbomachinery with an implicit relaxation method

p 2 A88-10357

Parabolized Navier-Stokes analysis of ducted supersonic combustion problems

p 2 A88-10361

Navier-Stokes solution for steady two-dimensional transonic cascade flows

[ASME PAPER 87-GT-54] p 4 A88-11005

Application of advanced computational codes in the design of an experiment for a supersonic throughflow fan rotor

[ASME PAPER 87-GT-160] p 6 A88-11072

Calculation of a three-dimensional turbomachinery rotor flow with a Navier-Stokes code

[ASME PAPER 87-GT-232] p 7 A88-11125

Computation of transonic separated wing flows using an Euler/Navier-Stokes zonal approach

[NASA-TM-88311] p 52 A88-11089

Flow in a model turbine stator

p 55 A88-11163

NAVIGATION AIDS

Modern technology in positioning and navigation; Navigation Meeting, Duesseldorf, Federal Republic of Germany, May 6-8, 1987, Reports

p 20 A88-10676

BMFT-supported projects in the fields position-finding, navigation, and traffic safety

p 20 A88-10677

The importance of modern positioning and navigation technology for ATC

p 20 A88-10678

Hybrid positioning and navigation systems - Technological status and development trends in position-finding and navigation procedures

p 20 A88-10684

Civil aviation application of the Global Positioning System (GPS) and its issues

p 22 A88-13088

NAVIGATION SATELLITES

An overview of space and aircraft navigation

p 40 A88-13086

A hybrid navigation system with GPS

p 21 A88-13087

NEUTRONS

Neutron and positron techniques for fluid transfer system analysis and remote temperature and stress measurement

[ASME PAPER 87-GT-219] p 48 A88-11116

NICKEL

Constitutive modeling for isotropic materials

p 55 A88-11171

NICKEL ALLOYS

The effect of variations of cobalt content on the cyclic oxidation resistance of selected Ni-base superalloys

p 40 A88-10031

Mechanical property requirements for aero gas turbine materials

p 42 A88-12628

High-temperature sheet materials for gas turbine applications

p 42 A88-12635

NITRIC OXIDE

Prediction of NO and CO distribution in gas turbine combustors

[ASME PAPER 87-GT-63] p 41 A88-11010

NOISE (SOUND)

Activities report of the Institute of Sound and Vibration Research

[ETN-87-90685] p 61 N88-10589

NOISE GENERATORS

Noise emission of civil and military aero-engines. Sources of generation and measures for attenuation

[ETN-87-91021] p 62 N88-10595

NOISE INTENSITY

First article test noise survey of the A/F32T-9 large turbo fan engine enclosed noise suppressor system, Sky Harbor IAP (International Airport), Phoenix, Arizona

[AD-A183799] p 61 N88-10588

Helicopter main-rotor speed effects on far-field acoustic levels

[NASA-TM-100512] p 62 N88-11451

NOISE MEASUREMENT

Noise levels from propeller-driven aircraft measured at ground level and at 1.2 m above the ground

[NPL-AC-110] p 61 N88-10594

NOISE PREDICTION (AIRCRAFT)

Prediction of sound fields in cavities using boundary-element methods

[ETN-87-91021] p 62 N88-10595

NOISE PROPAGATION

Noise emission of civil and military aero-engines. Sources of generation and measures for attenuation

[ETN-87-91021] p 62 N88-10595

NOISE REDUCTION

First article test noise survey of the A/F32T-9 large turbo fan engine enclosed noise suppressor system, Sky Harbor IAP (International Airport), Phoenix, Arizona

[AD-A183799] p 61 N88-10588

Noise emission of civil and military aero-engines. Sources of generation and measures for attenuation

[ETN-87-91021] p 62 N88-10595

NONDESTRUCTIVE TESTS

NDE at twelve o'clock high

[ETN-87-91021] p 62 N88-10595

NONUNIFORM FLOW

The spatially nonuniform convergence of the numerical solution of flows

[NASA-TM-100037] p 60 N88-11429

NOZZLE FLOW

Numerical solutions of scramjet nozzle flows

[ETN-87-91021] p 62 N88-10595

Oxygen recombination in a supersonic cooled flow

[ETN-87-91021] p 62 N88-10595

NOZZLE THRUST COEFFICIENTS

Comparison of wind tunnel and flight test afterbody and nozzle pressures for a twin-jet fighter aircraft at transonic speeds

[NASA-TP-2588] p 17 N88-10765

NOZZLES

Effect of empennage arrangement on single-engine nozzle/afterbody static pressures at transonic speeds

[NASA-TP-2753] p 17 N88-10771

NUMERICAL ANALYSIS

A numerical method for subsonic unsteady lifting surfaces - BIS. III - Some additional numerical results

[ETN-87-91021] p 62 N88-10595

A generalized numerical method for solving direct inverse and hybrid problems of blade cascade flow by using streamline-co-ordinate equation

[ASME PAPER 87-GT-29] p 4 A88-10990

Impact of turbulence modeling on numerical accuracy and efficiency of compressible flow simulations

[NASA-TM-88333] p 52 N88-11088

The spatially nonuniform convergence of the numerical solution of flows

[NASA-TM-100037] p 60 N88-11429

NUMERICAL STABILITY

Three-dimensional flow in a rotor - A strictly three-dimensional calculation of flows in turbomachines using the S1-S2 method

[ETN-87-91021] p 62 N88-10595

NUSSELT NUMBER

Effects of channel aspect ratio on heat transfer in rectangular passage sharp 180-deg turns

[ASME PAPER 87-GT-113] p 46 A88-11041

NYQUIST FREQUENCIES

Syntheses of reduced-order controllers for active flutter suppression

[ETN-87-91021] p 62 N88-10595

O**OBSERVABILITY (SYSTEMS)**

Optimal detection of sensor failures in flight control systems using deterministic observers

[ETN-87-91021] p 62 N88-10595

ONBOARD DATA PROCESSING

Optimal information processing for sensors and sensor systems - The case of radar sensors

[ETN-87-91021] p 62 N88-10595

AOSP - Multiprocessor architecture and system considerations

[AIAA PAPER 87-2790] p 59 A88-12544

OPTICAL DATA PROCESSING

Recent developments in infrared data processing

[ETN-87-91021] p 62 N88-10595

OPTICAL EQUIPMENT

A compact high performance thermal imager

[ETN-87-91021] p 62 N88-10595

OPTICAL GYROSCOPES

Inertial navigation - Technological status and development trends

[ETN-87-91021] p 62 N88-10595

OPTICAL RADAR

Airspeed measurement with a CO₂ lidar

[ETN-87-91021] p 62 N88-10595

OPTIMAL CONTROL

An optimal control method for passage of a flexible rotor through resonances

[ETN-87-91021] p 62 N88-10595

OPTIMIZATION

Necessary optimality conditions for three-dimensional bodies in supersonic gas flow

[ETN-87-91021] p 62 N88-10595

Investigation of integrated selection of optimum engine cycle parameters

[ASME PAPER 87-GT-39] p 29 A88-10993

Initial user experience with an artificial intelligence program for the preliminary design of centrifugal compressors

[ASME PAPER 87-GT-217] p 58 A88-11115

OPTOELECTRONIC DEVICES

Optical systems for gas turbine engines

[ETN-87-91021] p 62 N88-10595

ORIFICES

Dilution jet mixing program, phase 3

[ETN-87-91021] p 62 N88-10595

OXIDATION

Basic concepts for better heat protection systems

[ETN-87-91021] p 62 N88-10595

Thermal expansion mismatch and oxidation in thermal barrier coatings

[ETN-87-91021] p 62 N88-10595

OXIDATION RESISTANCE

The effect of variations of cobalt content on the cyclic oxidation resistance of selected Ni-base superalloys

[ETN-87-91021] p 62 N88-10595

OXYGEN RECOMBINATION

Oxygen recombination in a supersonic cooled flow

[ETN-87-91021] p 62 N88-10595

P**PANELS**

Stress intensity factors and residual strength of a cracked stiffened panel

[ETN-87-91021] p 62 N88-10595

PANORAMIC CAMERAS

Airborne reconnaissance pod flight test

[ETN-87-91021] p 62 N88-10595

Sensor configuration for a short to medium range reconnaissance pod

[ETN-87-91021] p 62 N88-10595

PARABOLIC DIFFERENTIAL EQUATIONS

Parabolized Navier-Stokes analysis of ducted supersonic combustion problems

[ETN-87-91021] p 62 N88-10595

PARACHUTE DESCENT

Aircraft and equipment factors in the occurrence of suspension line twists with U.S. Army parachutes

[ETN-87-91021] p 62 N88-10595

PARACHUTES

The aerodynamics of gliding parachutes

[ETN-87-91021] p 62 N88-10595

PARAMETERIZATION

The accuracy-related parametric reduction of mathematical models

[ETN-87-91021] p 62 N88-10595

PARTICLE LADEN JETS

Computer predictions of erosion damage in gas turbines

[ASME PAPER 87-GT-127] p 46 A88-11054

PASSENGER AIRCRAFT

Aircraft acoustics I - Exterior noise of subsonic passenger aircraft and helicopters --- Russian book

[ETN-87-91021] p 62 N88-10595

Aircraft acoustics II - Cabin noise in passenger aircraft --- Russian book

[ETN-87-91021] p 62 N88-10595

Wing design with a three-dimensional transonic inverse method

[ETN-87-91021] p 62 N88-10595

An aerodynamic design study of transonic transport wings

[ETN-87-91021] p 62 N88-10595

PERFORATED PLATES

Film cooling of a turbine blade with injection through two rows of holes in the near-endwall region

[ASME PAPER 87-GT-196] p 47 A88-11100

Structure simplification around a cutout - Application of a simplified damage tolerance design chart

[ETN-87-91021] p 62 N88-10595

PERFORMANCE PREDICTION

Analytical study of swirler effects in annular propulsive nozzles

[ETN-87-91021] p 62 N88-10595

Influence of the Reynolds number on the performance of centrifugal compressors

[ASME PAPER 87-GT-10] p 44 A88-10979

Correlations of fuel performance in a full-scale commercial combustor and two model combustors

[ASME PAPER 87-GT-89] p 29 A88-11028

Thermodynamics and performance projections for intercooled/reheat/recuperated gas turbine systems

[ASME PAPER 87-GT-108] p 46 A88-11040

Time-averaged heat-flux distributions and comparison with prediction for the Teledyne 702 HP turbine stage

[ASME PAPER 87-GT-120] p 30 A88-11048

Computer predictions of erosion damage in gas turbines

[ASME PAPER 87-GT-127] p 46 A88-11054

The performance estimation of transonic turbine at design and off-design conditions

[ASME PAPER 87-GT-148] p 30 A88-11066

Global positioning satellite-based automatic landing system and wind estimated feedback for the AH-64 helicopter

[ETN-87-91021] p 62 N88-10595

PERFORMANCE TESTS

Testing of aircraft electrical equipment --- Russian book

[ETN-87-91021] p 62 N88-10595

Electronic trend monitoring and exceedance recording systems - A means to improved turbine engine reliability

[ASME PAPER 87-GT-87] p 29 A88-11027

Test results and predictions for the response of near-ceiling sprinkler links in a full-scale compartment fire

[NBSIR-87-3633] p 50 N88-10209

Constitutive modeling for isotropic materials

[ETN-87-91021] p 62 N88-10595

PERMANENT MAGNETS

Force commutated direct frequency changers for aerospace power applications

[ETN-87-91021] p 62 N88-10595

Process support compressor motor electromagnetic design summary

[DE87-014359] p 52 N88-11048

PILOT PERFORMANCE

Versatile simulation testbed for rotorcraft speech I/O system design

[SAE PAPER 861661] p 57 A88-10154

Flying complex approach paths using the microwave landing system

[SAE PAPER 861771] p 35 A88-10159

Comparison of programmable legend keyboard and dedicated keyboard for control of the flight management computer

[SAE PAPER 861772] p 57 A88-10160

The advantages of a primary flight display

[SAE PAPER 861730] p 58 A88-10162

Improvements in aircraft safety and operational dependability from a projected flight path guidance display

[SAE PAPER 861732] p 35 A88-10163

The advantage of flightpath-oriented situation displays during microburst encounters

[SAE PAPER 861733] p 35 A88-10164

Airline requirements on a fly-by-wire aircraft - A pilot's view

[SAE PAPER 861804] p 36 A88-10167

Perspective traffic display format and airline pilot traffic avoidance

[SAE PAPER 861733] p 35 A88-10164

Investigation of interactions between limb-manipulator dynamics and effective vehicle roll control characteristics

[NASA-CR-3983] p 36 N88-10039

PITCHING MOMENTS

Unsteady aerodynamic measurements on a rotating compressor blade row at low Mach number

[ASME PAPER 87-GT-221] p 7 A88-11118

PLASMA SPRAYING

Thermal expansion mismatch and oxidation in thermal barrier coatings

[ETN-87-91021] p 62 N88-10595

Thermal barrier coating life prediction model development

[ETN-87-91021] p 62 N88-10595

PLASTIC PROPERTIES

3D inelastic analysis methods for hot section components

[ETN-87-91021] p 62 N88-10595

PLUMES

Plume infrared signature measurements and comparison with a theoretical model --- of turboshaft engines

[ETN-87-91021] p 62 N88-10595

Plume infrared signature measurements and comparison with a theoretical model --- of turboshaft engines

[ETN-87-91021] p 62 N88-10595

Plume infrared signature measurements and comparison with a theoretical model --- of turboshaft engines

[ETN-87-91021] p 62 N88-10595

Plume infrared signature measurements and comparison with a theoretical model --- of turboshaft engines

[ETN-87-91021] p 62 N88-10595

Plume infrared signature measurements and comparison with a theoretical model --- of turboshaft engines

[ETN-87-91021] p 62 N88-10595

Plume infrared signature measurements and comparison with a theoretical model --- of turboshaft engines

[ETN-87-91021] p 62 N88-10595

Plume infrared signature measurements and comparison with a theoretical model --- of turboshaft engines

RELAXATION METHOD (MATHEMATICS)

Calculation of three-dimensional viscous flows in turbomachinery with an implicit relaxation method
p 2 A88-10357

RELIABILITY

Software reliability models for fault-tolerant avionics computers and related topics
[NASA-CR-181440] p 60 N88-11382

RELIABILITY ANALYSIS

Applied reliability/maintainability methodology as a function within life cycle cost --- of aircraft turbine engine
[ASME PAPER 87-GT-172] p 46 A88-11082
NDE at twelve o'clock high p 48 A88-11585

RELIABILITY ENGINEERING

Design study for an FBW lateral control system
p 36 A88-13080
Stress intensity factors and residual strength of a cracked stiffened panel p 50 A88-13083
Structure simplification around a cutout - Application of a simplified damage tolerance design chart p 50 A88-13084

The application of emulation techniques in the analysis of highly reliable, guidance and control computer systems p 37 N88-10798
Some approaches to the design of high integrity software p 37 N88-10799
Reliability modeling of fault-tolerant computer based systems p 37 N88-10801
Software reliability models for fault-tolerant avionics computers and related topics
[NASA-CR-181440] p 60 N88-11382

REMOTE SENSING

Fiber optic engineering sensor system. Preliminary program management plan, phase 3 revision
[AD-A183663] p 62 N88-10608

REMOTE SENSORS

Airborne reconnaissance X; Proceedings of the Meeting, San Diego, CA, Aug. 19, 20, 1986
[SPIE-694] p 26 A88-12728
Sensor control/data display set (SC/DDSS) for film and/or electro optics (EO) p 26 A88-12731

REMOTELY PILOTED VEHICLES

Robotic air vehicle - A pilot's perspective
p 19 A88-10437
Atmospheric turbulence and gust on the performance of a Wortmann FX 63-137 wing p 9 A88-11185
Control surface effects on the low Reynolds number behavior of the Wortmann FX 63-137 p 10 A88-11187

The use of wind tunnel data in the design of radio controlled contest model sailplanes p 24 A88-11195
The calculation of flow about aerofoils at low Reynolds number with application to remotely piloted vehicles p 11 A88-11197

Preliminary measurements of the flight performance of an RPV compared with wind tunnel and CFD estimates
p 12 A88-11203

Aerodynamics of unmanned aircraft at full-scale in the RAE 24ft wind-tunnel p 12 A88-11204

Low altitude/airspeed unmanned research aircraft (LAURA) preliminary development p 12 A88-11205

Full-scale transport controlled impact demonstration program
[NASA-TM-89642] p 19 N88-10021

HiMAT flight program: Test results and program assessment overview
[NASA-TM-86725] p 24 N88-10026

REPORTS

Aircraft accidents
[JB-84] p 19 N88-10020

REQUIREMENTS

Airline requirements on a fly-by-wire aircraft - A pilot's view
[SAE PAPER 861804] p 36 A88-10167

RESEARCH AIRCRAFT

Low altitude/airspeed unmanned research aircraft (LAURA) preliminary development p 12 A88-11205

RESEARCH AND DEVELOPMENT

Color display technology - An overview
[SAE PAPER 861692] p 43 A88-10170

AGT101 - Ceramic gas turbine development
[ASME PAPER 87-GT-228] p 32 A88-11122

The development of 270 Vdc solid state power controllers --- for advanced aircraft electrical systems.
p 33 A88-11923

Investigations in the history and theory of development of aerospace science and technology. Number 5 --- Russian book p 62 A88-12202

Composites technology in Army aviation
p 24 A88-12413

Developments in disc materials --- for gas turbine engines p 42 A88-12632

RESEARCH VEHICLES

Low cost windowless cockpit research vehicle
[SAE PAPER 861755] p 39 A88-10156

RESIN MATRIX COMPOSITES

Composite structural materials
[NASA-CR-181416] p 56 N88-11186

RESONANT VIBRATION

Localization of natural modes of vibration in bladed disks
[ASME PAPER 87-GT-46] p 29 A88-10998
An optimal control method for passage of a flexible rotor through resonances p 48 A88-11439

REYNOLDS NUMBER

Influence of the Reynolds number on the performance of centrifugal compressors
[ASME PAPER 87-GT-10] p 44 A88-10979
Effects of channel aspect ratio on heat transfer in rectangular passage sharp 180-deg turns
[ASME PAPER 87-GT-113] p 46 A88-11041

Heat transfer to arrays of impinging jets in a crossflow
[ASME PAPER 87-GT-198] p 47 A88-11102

A study of the effects of thermal barrier coating surface roughness on the boundary layer characteristics of gas-turbine aerofoils
[ASME PAPER 87-GT-223] p 48 A88-11120

Particle transport across the transpired turbulent boundary layer
[ASME PAPER 87-GT-265] p 48 A88-11142

The structure of separated flow regions occurring near the leading edge of airfoils including transition
[NASA-CR-181434] p 16 N88-10011

RING LASERS

Inertial navigation - Technological status and development trends p 20 A88-10682

RISK

Flight safety and risk p 19 A88-10658

ROBOTICS

Robotic air vehicle - A pilot's perspective
p 19 A88-10437

ROLL

Investigation of interactions between limb-manipulator dynamics and effective vehicle roll control characteristics
[NASA-CR-3983] p 36 N88-10039

ROLLER BEARINGS

Counterrotating differential cylindrical roller bearing development
[AIAA PAPER 87-1843] p 43 A88-10497

Improved oil-off survivability of tapered roller bearings
[NASA-CR-180804] p 53 N88-11135

ROTARY WINGS

The flow visualization on the rotary wing with low aspect ratio p 2 A88-10094

Analytical modeling of helicopter static and dynamic induced velocity in GRASP
[NASA-TM-100026] p 18 N88-10777

ROTATING DISKS

Prediction of turbulent source flow between corotating disks with an anisotropic two-equation turbulence model
[ASME PAPER 87-GT-73] p 45 A88-11017

Analysis of windage losses and velocity distribution for a shrouded rotating disk
[ASME PAPER 87-GT-186] p 6 A88-11091

Cyclic spinning testing of aero-engine discs
[ASME PAPER 87-GT-259] p 32 A88-11139

Developments in disc materials --- for gas turbine engines p 42 A88-12632

ROTATING FLUIDS

Numerical prediction of turbulent flow in rotating cavities
[ASME PAPER 87-GT-74] p 45 A88-11018

ROTATING STALLS

Investigation of the excitation of turbine blade vibration in axial compressors in rotating stall
[ETN-87-90377] p 34 N88-10035

ROTATION

Coolant passage heat transfer with rotation
p 54 N88-11160

ROTOR AERODYNAMICS

Navier-Stokes simulations of rotor/stator interaction using patched and overlaid grids p 2 A88-10354

Through-flow analysis of a multi-stage compressor operating at near-stall conditions
[ASME PAPER 87-GT-51] p 4 A88-11003

Sealing of a shrouded rotor-stator system with pre-swirl coolant
[ASME PAPER 87-GT-72] p 45 A88-11016

ROTOR BLADES

Sealing of a shrouded rotor-stator system with pre-swirl coolant
[ASME PAPER 87-GT-72] p 45 A88-11016

On predicting the resonant response of bladed disk assemblies
[ASME PAPER 87-GT-158] p 30 A88-11070

Modelling the unsteady flow in a turbine rotor passage
[ASME PAPER 87-GT-197] p 7 A88-11101

ROTOR BLADES (TURBOMACHINERY)

A new method of calculating optimum velocity distribution along the blade surface on arbitrary stream surface of revolution in turbomachines
[ASME PAPER 87-GT-30] p 4 A88-10991

Localization of natural modes of vibration in bladed disks
[ASME PAPER 87-GT-46] p 29 A88-10998

Application of advanced computational codes in the design of an experiment for a supersonic throughflow fan rotor
[ASME PAPER 87-GT-160] p 6 A88-11072

Unified equation of motion (UEM) approach as applied to S1 turbomachinery problems
[ASME PAPER 87-GT-179] p 6 A88-11087

Calculation of a three-dimensional turbomachinery rotor flow with a Navier-Stokes code
[ASME PAPER 87-GT-232] p 7 A88-11125

Integration of dynamic, aerodynamic and structural optimization of helicopter rotor blades
[NASA-CR-181441] p 16 N88-10012

ROTOR SPEED

Helicopter main-rotor speed effects on far-field acoustic levels
[NASA-TM-100512] p 62 N88-11451

ROTOR SYSTEMS RESEARCH AIRCRAFT

Flight research at NASA Ames Research Center: A test pilot's perspective
[NASA-TM-100025] p 25 N88-10788

ROTORCRAFT AIRCRAFT

Composite materials in rotorcraft p 24 A88-12412

ROTORS

Three-dimensional flow in a rotor - A strictly three-dimensional calculation of flows in turbomachines using the S1-S2 method p 44 A88-10628

Effect of fluid inertia on the performance of squeeze film damper supported rotors
[ASME PAPER 87-GT-220] p 48 A88-11117

An optimal control method for passage of a flexible rotor through resonances p 48 A88-11439

Turbines with counterrotating runners for aircraft power plants p 34 A88-10992

A 1987 progress report of manufacturing techniques for Gravity Probe B gyroscope rotors
[NASA-TM-100312] p 53 N88-11101

RULES

A rule-based system for arrival sequencing and scheduling in air traffic control p 22 N88-10815

S**SAFETY DEVICES**

The use of Kevlar on aero-engine fan containment casings
[PNR80410] p 53 N88-11134

SAMPLING

Measurements in the functional mock up test of the NAL QSTOL aircraft control system
[NAL-TR-928] p 36 N88-10793

SATELLITE ATTITUDE CONTROL

Aerospace research at the National Aerospace Laboratory (NLR)
[ETN-87-90821] p 62 N88-10697

SATELLITE ORIENTATION

Analysis of free molecular effects on the attitude of satellites in geostationary transfer orbit. Part 2: Force and torque measurement in free molecular wind tunnel tests
[DFVLR-IB-222-86-A-07] p 40 N88-10078

SATELLITE PERTURBATION

Analysis of free molecular effects on the attitude of satellites in geostationary transfer orbit. Part 2: Force and torque measurement in free molecular wind tunnel tests
[DFVLR-IB-222-86-A-07] p 40 N88-10078

SATELLITE TELEVISION

Video data link provides television pictures in near real time via tactical radio and satellite channels
p 49 A88-12732

SCALE MODELS

Correlations of fuel performance in a full-scale commercial combustor and two model combustors
[ASME PAPER 87-GT-89] p 29 A88-11028

Velocity scaled aeroelastic testing of advanced turboprops
[ASME PAPER 87-GT-209] p 31 A88-11110

Wind tunnel testing of small scale pressure tapped model propellers p 32 A88-11196

SCALING LAWS

Velocity scaled aeroelastic testing of advanced turboprops
[ASME PAPER 87-GT-209] p 31 A88-11110

SCHEDULING

A rule-based system for arrival sequencing and scheduling in air traffic control p 22 N88-10815

SCHMIDT NUMBER

Particle transport across the transpired turbulent boundary layer
[ASME PAPER 87-GT-265] p 48 A88-11142

SEALS (STOPPERS)

Development of the AGT101 regenerator seals
[ASME PAPER 87-GT-173] p 46 A88-11083

SENSORS

Sensor configuration for a short to medium range reconnaissance pod p 27 A88-12742
Optimal detection of sensor failures in flight control systems using deterministic observers p 38 A88-10803

SEPARATED FLOW

Experimental study of three-dimensional separated flow surrounding a hemisphere-cylinder at incidence
[AIAA PAPER 87-2492] p 3 A88-10498

Experimental investigations of flows through a plane cascade at large angles of attack with separations
[ASME PAPER 87-GT-96] p 5 A88-11035

On massive laminar separation and lift anomalies in subcritical Re-range p 8 A88-11178

A simple method for the prediction of separation bubble formation on aerofoils at low Reynolds number p 8 A88-11179

Low Reynolds number airfoil design at the Douglas Aircraft Company p 9 A88-11183

Boundary layer and performance characteristics from wind tunnel tests of a low Reynolds number Liebeck airfoil p 9 A88-11184

Global marching technique for predicting separated flows over arbitrary airfoils p 14 A88-12293

The structure of separated flow regions occurring near the leading edge of airfoils including transition
[NASA-CR-181434] p 16 A88-10011

Investigations of separated flow states on wings of medium aspect ratio taking into account the wind tunnel interference problem p 17 A88-10016

Integration effects of D-shaped, underwing, aft-mounted, separate-flow, flow-through nacelles on a high-wing transport p 18 A88-10773

Computation of transonic separated wing flows using an Euler/Navier-Stokes zonal approach
[NASA-TM-88311] p 52 A88-11089

SERVICE LIFE

New Soviet helicopter technology and its potential for industrial use p 1 A88-10657

Ensuring the service life of designs (experience in aircraft construction) p 1 A88-10986

SHOCK ABSORBERS

Steering mechanism --- vehicles
[EP-PATENT-0-181-700-A1] p 51 A88-10338

SHOCK LAYERS

Effect of energy release in the shock layer on the supersonic flight of bodies p 13 A88-12073

SHOCK LOADS

Shock embedding discontinuous solution of elliptic equation for inverse problem of transonic S2 flow
[ASME PAPER 87-GT-115] p 5 A88-11043

SHOCK WAVE PROPAGATION

Stability of supersonic flow of an ideal gas with a head shock wave past cylindrical channels and cavities p 13 A88-12065

SHOCK WAVES

Characterization of shock wave end wall boundary layer interactions in a transonic compressor rotor
[ASME PAPER 87-GT-166] p 6 A88-11077

Modelling the unsteady flow in a turbine rotor passage
[ASME PAPER 87-GT-197] p 7 A88-11101

SHORT HAUL AIRCRAFT

Flight research at NASA Ames Research Center: A test pilot's perspective
[NASA-TM-100025] p 25 A88-10788

SHORT TAKEOFF AIRCRAFT

HTTB - The ultimate test bed p 23 A88-10875

The Antonov An-74 brings high tech to low temperatures p 23 A88-10876

SHROUDED TURBINES

Localization of natural modes of vibration in bladed disks
[ASME PAPER 87-GT-46] p 29 A88-10998

Sealing of a shrouded rotor-stator system with pre-swirl coolant
[ASME PAPER 87-GT-72] p 45 A88-11016

Analysis of windage losses and velocity distribution for a shrouded rotating disk
[ASME PAPER 87-GT-186] p 6 A88-11091

SIGNAL PROCESSING

AOSP - Multiprocessor architecture and system considerations
[AIAA PAPER 87-2790] p 59 A88-12544

Synchronizing video signals to standard IIRIG time codes p 21 A88-12737

Measurements in the functional mock up test of the NAL QSTOL aircraft control system
[NAL-TR-928] p 36 A88-10793

SILICON NITRIDES

Development of a statistically proven injection molding method for reaction bonded silicon nitride, sintering reaction bonded silicon nitride, and sintered silicon nitride
[ETN-87-90575] p 52 A88-11002

SIMULATION

Impact of turbulence modeling on numerical accuracy and efficiency of compressible flow simulations
[NASA-TM-88333] p 52 A88-11088

SINGLE CRYSTALS

Constitutive modeling of superalloy single crystals with verification testing p 43 A88-11169

SODIUM CHLORIDES

Experimental verification of vapor deposition rate theory in high velocity burner rigs p 43 A88-11179

SOFTWARE ENGINEERING

Color display programming for aviation
[DFVLR-MITT-87-03] p 28 A88-10031

Some approaches to the design of high integrity software p 37 A88-10799

Assessment of software quality for the AIRBUS A310 automatic pilot p 38 A88-10804

Software reliability models for fault-tolerant avionics computers and related topics
[NASA-CR-181440] p 60 A88-11382

SOFTWARE TOOLS

FDAD - A lab/field test tool --- Flight Data Analysis and Display p 25 A88-10436

Traditional versus rule-based programming techniques - Application to the control of optional flight information p 58 A88-10965

SOLID STATE DEVICES

The development of 270 Vdc solid state power controllers --- for advanced aircraft electrical systems. p 33 A88-11923

SOUND FIELDS

Prediction of sound fields in cavities using boundary-element methods p 61 A88-12281

SPACECRAFT DESIGN

Aerospace research at the National Aerospace Laboratory (NLR)
[ETN-87-90821] p 62 A88-10697

SPACECRAFT PROPULSION

High temperature metal matrix composites for future aerospace systems
[NASA-TM-100212] p 43 A88-10938

SPECIFIC HEAT

Effects of channel aspect ratio on heat transfer in rectangular passage sharp 180-deg turns
[ASME PAPER 87-GT-113] p 46 A88-11041

SPECTRORADIOMETERS

Plume infrared signature measurements and comparison with a theoretical model --- of turboshaft engines p 33 A88-12836

SPEECH RECOGNITION

Versatile simulation testbed for rotorcraft speech I/O system design
[SAE PAPER 861661] p 57 A88-10154

SPEED REGULATORS

The design of a turboshaft speed governor using modern control techniques
[NASA-CR-175046] p 51 A88-10339

SPHERES

Supersonic flow around a sphere in a thermal inhomogeneity p 2 A88-10264

SPRAY CHARACTERISTICS

Experiments on spray interactions in the wake of a bluff body
[ASME PAPER 87-GT-48] p 44 A88-11000

Spray performance of a hybrid injector under varying air density conditions
[ASME PAPER 87-GT-155] p 46 A88-11068

SPRAYED COATINGS

Development and production of new and modified powders for sprayed coatings and components for saving important raw materials
[BMFT-FB-T-86-129] p 42 A88-10159

SPRINKLING

Test results and predictions for the response of near-ceiling sprinkler links in a full-scale compartment fire
[NBSIR-87-3633] p 50 A88-10209

SPUTTERING

Thin-film temperature sensors deposited by radio frequency cathodic sputtering p 50 A88-12903

SQUEEZE FILMS

Effect of fluid inertia on the performance of squeeze film damper supported rotors
[ASME PAPER 87-GT-220] p 48 A88-11117

STABILIZERS (FLUID DYNAMICS)

Advanced composite horizontal stabilizer for next-generation commercial aircraft p 24 A88-13081

STANDARDS

AGARD standard aeroelastic configurations for dynamic response. Candidate configuration I-wing 445.6
[NASA-TM-100492] p 56 A88-11202

STATIC CHARACTERISTICS

The Lewis Strain Gauge Laboratory: Status and plans p 54 A88-11146

STATIC PRESSURE

Pressure field due to drag reducing outer layer devices in turbulent boundary layers p 3 A88-10492

Effect of empennage arrangement on single-engine nozzle/afterbody static pressures at transonic speeds
[NASA-TP-2753] p 17 A88-10771

STATISTICAL ANALYSIS

Analyses and assessments of span wise gust gradient data from NASA B-57B aircraft
[NASA-CR-178288] p 15 A88-10007

Software reliability models for fault-tolerant avionics computers and related topics
[NASA-CR-181440] p 60 A88-11382

STATISTICAL CORRELATION

Correlations of fuel performance in a full-scale commercial combustor and two model combustors
[ASME PAPER 87-GT-89] p 29 A88-11028

STATOR BLADES

Sealing of a shrouded rotor-stator system with pre-swirl coolant
[ASME PAPER 87-GT-72] p 45 A88-11016

Unified equation of motion (UEM) approach as applied to S1 turbomachinery problems
[ASME PAPER 87-GT-179] p 6 A88-11087

STATORS

Navier-Stokes simulations of rotor/stator interaction using patched and overlaid grids p 2 A88-10354

Analysis of windage losses and velocity distribution for a shrouded rotating disk
[ASME PAPER 87-GT-186] p 6 A88-11091

Flow in a model turbine stator p 55 A88-11163

STEADY FLOW

Navier-Stokes solution for steady two-dimensional transonic cascade flows
[ASME PAPER 87-GT-54] p 4 A88-11005

Refined numerical solution of the transonic flow past a wedge p 14 A88-12280

STEADY STATE

Blade loss transient dynamics analysis, volume 1. Task 2: TETRA 2 theoretical development
[NASA-CR-179632] p 34 A88-10791

Blade loss transient dynamics analysis, volume 2. Task 2: TETRA 2 user's manual
[NASA-CR-179633] p 34 A88-10792

STEERING

Steering mechanism --- vehicles
[EP-PATENT-0-181-700-A1] p 51 A88-10338

STIRLING ENGINES

An improved Stirling engine for model aircraft propulsion p 33 A88-11976

STOKES FLOW

Multigrid localization and multigrid grid generation for the computation of vortex structures and dynamics of flows in cavities and about airfoils p 3 A88-10562

STRAIN GAGES

The development of a high temperature static strain gage system p 53 A88-11142

The Lewis Strain Gauge Laboratory: Status and plans p 54 A88-11146

High temperature stress-strain analysis p 55 A88-11170

STRAIN MEASUREMENT

The development of a high temperature static strain gage system p 53 A88-11142

The Lewis Strain Gauge Laboratory: Status and plans p 54 A88-11146

High temperature stress-strain analysis p 55 A88-11170

STRAPDOWN INERTIAL GUIDANCE

Inertial navigation - Technological status and development trends p 20 A88-10682

Test equipment with fiber optic data bus and laser gyro strapdown system LTN-90 for the helicopter BO-105
[ESA-TT-1038] p 22 A88-10025

STREAM FUNCTIONS (FLUIDS)

Numerical solution of stream function equations in transonic flows
[ASME PAPER 87-GT-18] p 3 A88-10983

Shock embedding discontinuous solution of elliptic equation for inverse problem of transonic S2 flow
[ASME PAPER 87-GT-115] p 5 A88-11043

A discussion of the mean S2 stream surfaces applied to quasi-three-dimensional calculation programs for turbomachinery design
[ASME PAPER 87-GT-150] p 5 A88-11067

STRESS ANALYSIS

Criteria for determination of significant load cycles in variable amplitude load sequences
[NLR-MP-86013-U] p 51 A88-10386

3D inelastic analysis methods for hot section components p 55 A88-11164

- Component specific modeling p 60 N88-11166
 Constitutive modeling of superalloy single crystals with verification testing p 43 N88-11169
 Constitutive modeling for isotropic materials p 55 N88-11171

STRESS MEASUREMENT

- Neutron and positron techniques for fluid transfer system analysis and remote temperature and stress measurement [ASME PAPER 87-GT-219] p 48 A88-11116

STRESS-STRAIN RELATIONSHIPS

- Constitutive modeling of superalloy single crystals with verification testing p 43 N88-11169
 High temperature stress-strain analysis p 55 N88-11170
 Constitutive modeling for isotropic materials p 55 N88-11172

STRESSES

- Component specific modeling p 60 N88-11166

STRUCTURAL ANALYSIS

- Localization of natural modes of vibration in bladed disks [ASME PAPER 87-GT-46] p 29 A88-10998
 Reliability of finite element methods in North America [AGARD-R-748] p 53 N88-11139
 Turbine Engine Hot Section Technology, 1985 [NASA-CP-2405] p 53 N88-11140
 3D inelastic analysis methods for hot section components p 55 N88-11164
 3-D inelastic analysis methods for hot section components p 60 N88-11165
 High temperature stress-strain analysis p 55 N88-11170
 Constitutive modeling for isotropic materials p 55 N88-11171

STRUCTURAL DESIGN

- Advanced composite horizontal stabilizer for next-generation commercial aircraft p 24 A88-13081
 Design and fabrication trial of a composite flap structure p 1 A88-13082
 Structure simplification around a cutout - Application of a simplified damage tolerance design chart p 50 A88-13084
 Integration of dynamic, aerodynamic and structural optimization of helicopter rotor blades [NASA-CR-181441] p 16 N88-10012

STRUCTURAL DESIGN CRITERIA

- Stress intensity factors and residual strength of a cracked stiffened panel p 50 A88-13083

STRUCTURAL MEMBERS

- Possibilities for the modeling of dynamically loaded cylindrical structural parts in the wind tunnel [KU-SFB-210/T/24] p 15 N88-10005

STRUCTURAL RELIABILITY

- NDE at twelve o'clock high p 48 A88-11585
 Ensuring the service life of designs (experience in aircraft construction) p 1 N88-10986

STRUCTURAL VIBRATION

- On predicting the resonant response of bladed disk assemblies [ASME PAPER 87-GT-158] p 30 A88-11070

SUBSONIC AIRCRAFT

- Aircraft acoustics I - Exterior noise of subsonic passenger aircraft and helicopters --- Russian book p 61 A88-10047

SUBSONIC FLOW

- Arbitrary wings of low aspect ratio in subsonic flow p 3 A88-10660
 Viscid/inviscid interaction analysis of subsonic turbulent trailing-edge flows p 14 A88-12282

SUBSONIC WIND TUNNELS

- Dynamic wind tunnel balances in the DFVLR subsonic wind tunnel in Braunschweig p 39 A88-12488

SUPERCOMPUTERS

- Advanced computing for manufacturing p 60 A88-13109

SUPERCritical AIRFOILS

- A transonic model representation for two-dimensional wall interference assessment [NLR-TR-86026-U] p 15 N88-10006

SUPERCritical FLOW

- Theoretical and experimental analysis of a compressor cascade at supercritical flow conditions [ASME PAPER 87-GT-256] p 8 A88-11136

SUPERSONIC COMBUSTION

- Applicability of a diffusion combustion model to the analysis of supersonic turbulent reacting jets p 40 A88-10180

SUPERSONIC COMBUSTION RAMJET ENGINES

- Evolution and application of CFD techniques for scramjet engine analysis p 28 A88-10358
 The scramjet - Toward Mach 4-25 flight p 33 A88-13095

SUPERSONIC COMPRESSORS

- Off-design performance of supersonic compressors with fixed and variable geometry [ASME PAPER 87-GT-116] p 5 A88-11044

SUPERSONIC FLIGHT

- An Orient Express to capture the market p 1 A88-10370
 Multimodes to Mach 5 p 28 A88-10371
 Effect of energy release in the shock layer on the supersonic flight of bodies p 13 A88-12073

SUPERSONIC FLOW

- Supersonic flow around a sphere in a thermal inhomogeneity p 2 A88-10264
 Necessary optimality conditions for three-dimensional bodies in supersonic gas flow p 2 A88-10300
 Experimental study of three-dimensional separated flow surrounding a hemisphere-cylinder at incidence [AIAA PAPER 87-2492] p 3 A88-10498
 Application of advanced computational codes in the design of an experiment for a supersonic throughflow fan rotor [ASME PAPER 87-GT-160] p 6 A88-11072
 Numerical solution of coupled problems of supersonic flow past deformable shells of finite thickness p 13 A88-11280
 Strong gas injection into supersonic flow with turbulent mixing p 13 A88-12056
 Stability of supersonic flow of an ideal gas with a head shock wave past cylindrical channels and cavities p 13 A88-12065
 Oxygen recombination in a supersonic cooled flow p 13 A88-12071
 Analysis of supersonic heterogeneous flow impinging on an obstacle p 14 A88-12074
 Optimal lifting wings with required longitudinal balancing characteristics p 14 A88-12075
 Intergration effects of D-shaped, underwing, aft-mounted, separate-flow, flow-through nacelles on a high-wing transport [NASA-TM-4018] p 18 N88-10773

SUPERSONIC JET FLOW

- Applicability of a diffusion combustion model to the analysis of supersonic turbulent reacting jets p 40 A88-10180

SUPERSONIC TEST APPARATUS

- Verification of compressor data accuracy by uncertainty analysis and testing methods [ASME PAPER 87-GT-165] p 30 A88-11076

SURFACE GEOMETRY

- Observations and analyses of natural laminar flow over a nonlifting airframe surface [SAE PAPER 871020] p 15 A88-13096

SURFACE NAVIGATION

- Autonomous onboard collision avoidance for aircraft and ships p 21 A88-10687

SURFACE ROUGHNESS

- Use of a liquid-crystal and heater-element composite for quantitative, high-resolution heat-transfer coefficients on a turbine airfoil including turbulence and surface-roughness effects p 44 A88-10969
 Experience about the application and valuation of roughness strips for boundary layer transition control in wind tunnel tests in the high-speed range [ESA-TT-1028] p 51 N88-10278

SURFACE ROUGHNESS EFFECTS

- The effect of grit roughness on the performance of the Wortmann FX63-137 airfoil at a chord Reynolds number of 100,000 p 11 A88-11202

SURFACE TEMPERATURE

- Procedures for determining surface heat flux using thin film gauges on a coated metal model in a transient test facility [ASME PAPER 87-GT-95] p 45 A88-11034

SURVIVAL

- Improved oil-off survivability of tapered roller bearings [NASA-CR-180804] p 53 N88-11135

SUSPENDING (HANGING)

- Aircraft and equipment factors in the occurrence of suspension line twists with U.S. Army parachutes p 19 A88-12644

SWEPT WINGS

- Investigations of separated flow states on wings of medium aspect ratio taking into account the wind tunnel interference problem [ETN-87-90437] p 17 N88-10016
 Measurement techniques in low-speed turbulent flows: A report on EUROMECH 202 [NLR-MP-86038-U] p 51 N88-10283

SWIRLING

- Analytical study of swirler effects in annular propulsive nozzles p 28 A88-10362
 Sealing of a shrouded rotor-stator system with pre-swirl coolant [ASME PAPER 87-GT-72] p 45 A88-11016

- Flow investigations on swirling compressible flow through a vaneless radial diffuser [ASME PAPER 87-GT-193] p 7 A88-11097

SWITCHING CIRCUITS

- The development of 270 Vdc solid state power controllers --- for advanced aircraft electrical systems. p 33 A88-11923

SYNCHRONIZERS

- Synchronizing video signals to standard IRIG time codes p 21 A88-12737

SYSTEMS ANALYSIS

- Digital system bus integrity [NASA-CR-181446] p 28 N88-10030
 Software reliability models for fault-tolerant avionics computers and related topics [NASA-CR-181440] p 60 N88-11382

SYSTEMS ENGINEERING

- Versatile simulation testbed for rotorcraft speech I/O system design [SAE PAPER 861661] p 57 A88-10154
 Real-time reconnaissance - An engineering perspective p 21 A88-12733
 Datalink design trade-offs for electro-optical reconnaissance systems p 27 A88-12740
 Fiber optic engineering sensor system. Preliminary program management plan, phase 3 revision [AD-A183663] p 62 N88-10608
 AI expert system technology issues for guidance and control applications p 38 N88-10808

SYSTEMS INTEGRATION

- Design principles and practices for implementation of MIL-STD-1760 in aircraft and stores [AD-A183724] p 24 N88-10027

SYSTEMS SIMULATION

- Versatile simulation testbed for rotorcraft speech I/O system design [SAE PAPER 861661] p 57 A88-10154

T**TAIL ASSEMBLIES**

- Advanced composite horizontal stabilizer for next-generation commercial aircraft p 24 A88-13081
 Effect of empennage arrangement on single-engine nozzle/afterbody static pressures at transonic speeds [NASA-TP-2753] p 17 N88-10771

TAKEOFF

- Noise of a model high speed counterrotation propeller at simulated takeoff/approach conditions (F7/A7) [NASA-TM-100206] p 61 N88-10592

TAPERING

- Improved oil-off survivability of tapered roller bearings [NASA-CR-180804] p 53 N88-11135

TARGET ACQUISITION

- Autonomous processing using a blackboard chipset [AIAA PAPER 87-2855] p 59 A88-12575

TARGET RECOGNITION

- Detection of targets in the presence of clutter using target echo modulations caused by rotating structures [REPT-12-86] p 50 N88-10231

TASK COMPLEXITY

- Perspective traffic display format and airline pilot traffic avoidance p 58 A88-12639

TECHNOLOGICAL FORECASTING

- Prepare for the 21st century - The 1987 Alexander A. Nikolsky Lecture --- examples of future design possibilities of helicopters p 24 A88-12645

TECHNOLOGY ASSESSMENT

- Color display technology - An overview [SAE PAPER 861692] p 43 A88-10170
 The importance of modern positioning and navigation technology for ATC p 20 A88-10678
 Development and trends in radio position finding p 20 A88-10680
 Inertial navigation - Technological status and development trends p 20 A88-10682
 The United Kingdom engine technology demonstrator programme [ASME PAPER 87-GT-203] p 31 A88-11107
 Aerodynamics at low Reynolds numbers - A review of theoretical and experimental research at Delft University of Technology p 8 A88-11177
 Softcopy versus hardcopy --- digital image displays for aerial reconnaissance p 27 A88-12750
 Recent developments in infrared data processing p 28 A88-12751
 Investigation of the suitability of the 8ft x 6ft transonic wind-tunnel for aeroacoustic research on propellers [RAE-TM-AERO-2093] p 39 N88-10041
 A survey of aircraft integrated control technology [AR-004-561] p 37 N88-10794
 Transmission efficiency in advanced aerospace powerplant [PNR90391] p 53 N88-11133

TECHNOLOGY UTILIZATION

- New Soviet helicopter technology and its potential for industrial use p 1 A88-10657
Composite directions at Kaman p 41 A88-12414

TELEMETRY

- Fiber optic engineering sensor system. Preliminary program management plan, phase 3 revision [AD-A183663] p 62 N88-10608

TELEVISION TRANSMISSION

- Video data link provides television pictures in near real time via tactical radio and satellite channels p 49 A88-12732

TEMPERATURE DISTRIBUTION

- Supersonic flow around a sphere in a thermal inhomogeneity p 2 A88-10264
On the mixing of a row of jets with a confined crossflow p 54 N88-11154

TEMPERATURE MEASUREMENT

- Neutron and positron techniques for fluid transfer system analysis and remote temperature and stress measurement [ASME PAPER 87-GT-219] p 48 A88-11116

TEMPERATURE MEASURING INSTRUMENTS

- Procedures for determining surface heat flux using thin film gauges on a coated metal model in a transient test facility [ASME PAPER 87-GT-95] p 45 A88-11034

TEMPERATURE PROFILES

- A trace gas technique to study mixing in a turbine stage [ASME PAPER 87-GT-118] p 5 A88-11046

TEMPERATURE SENSORS

- Development of heat flux sensors for turbine airfoils p 54 N88-11143

TENSILE STRENGTH

- Cyclic spinning testing of aero-engine discs [ASME PAPER 87-GT-259] p 32 A88-11139

TENSILE STRESS

- Constitutive modeling of superalloy single crystals with verification testing p 43 N88-11169

TENSILE TESTS

- Creep fatigue life prediction for engine hot section materials (isotropic): Third year progress review p 55 N88-11173
Elevated temperature crack growth p 55 N88-11174

TERMINAL FACILITIES

- Issues in air transport and airport management [PB87-204509] p 19 N88-10782

TETHERLINES

- Aircraft and equipment factors in the occurrence of suspension line twists with U.S. Army parachutes p 19 A88-12644

THERMAL CONTROL COATINGS

- Thermal expansion mismatch and oxidation in thermal barrier coatings p 56 N88-11182

THERMAL PROTECTION

- Thermal barrier coating life prediction model development p 56 N88-11183
Thermal barrier coating life prediction model development p 56 N88-11185

THERMAL STRESSES

- Cyclic spinning testing of aero-engine discs [ASME PAPER 87-GT-259] p 32 A88-11139

THERMODYNAMIC EFFICIENCY

- Thermodynamics and performance projections for intercooled/reheat/recuperated gas turbine systems [ASME PAPER 87-GT-108] p 46 A88-11040
A trade-off study of rotor tip clearance flow in a turbine/exhaust diffuser system [ASME PAPER 87-GT-229] p 32 A88-11123

THERMODYNAMIC PROPERTIES

- Combustion gas properties. III - Prediction of the thermodynamic properties of combustion gases of aviation and diesel fuels [ASME PAPER 87-GT-49] p 40 A88-11001

THERMOMETERS

- Thin-film temperature sensors deposited by radio frequency cathodic sputtering p 50 A88-12903

THERMOSETTING RESINS

- Composite structural materials [NASA-CR-181416] p 56 N88-11186

THIN FILMS

- Procedures for determining surface heat flux using thin film gauges on a coated metal model in a transient test facility [ASME PAPER 87-GT-95] p 45 A88-11034
Thin-film temperature sensors deposited by radio frequency cathodic sputtering p 50 A88-12903

THIN WINGS

- Optimal lifting wings with required longitudinal balancing characteristics p 14 A88-12075
Calculation of aerodynamic heat transfer for blunt-nosed thin wings at different angles of attack at supersonic speeds [NASA-TT-20127] p 18 N88-10776

THREE DIMENSIONAL BODIES

- Necessary optimality conditions for three-dimensional bodies in supersonic gas flow p 2 A88-10300
Problem and solution formulations for the generation of 3D block-structured grids --- aircraft design [NLR-MP-86020-U] p 25 N88-10028

THREE DIMENSIONAL FLOW

- Calculation of three-dimensional viscous flows in turbomachinery with an implicit relaxation method p 2 A88-10357
Experimental study of three-dimensional separated flow surrounding a hemisphere-cylinder at incidence [AIAA PAPER 87-2492] p 3 A88-10498
Three-dimensional flow in a rotor - A strictly three-dimensional calculation of flows in turbomachines using the S1-S2 method p 44 A88-10628
A simplified method for 3-D potential flow in turbomachinery using vortex sheet boundary conditions [ASME PAPER 87-GT-28] p 3 A88-10989
Three-dimensional calculation of wall boundary layer flows in turbomachines [ASME PAPER 87-GT-82] p 4 A88-11022
Numerical solution of three-dimensional turbulent flows for modern gas turbine components [ASME PAPER 87-GT-84] p 4 A88-11024
Shock embedding discontinuous solution of elliptic equation for inverse problem of transonic S2 flow [ASME PAPER 87-GT-115] p 5 A88-11043
A discussion of the mean S2 stream surfaces applied to quasi-three-dimensional calculation programs for turbomachinery design [ASME PAPER 87-GT-150] p 5 A88-11067
Application of advanced computational codes in the design of an experiment for a supersonic throughflow fan rotor [ASME PAPER 87-GT-160] p 6 A88-11072
Development and application of a high frequency wedge probe [ASME PAPER 87-GT-216] p 47 A88-11114
Calculation of a three-dimensional turbomachinery rotor flow with a Navier-Stokes code [ASME PAPER 87-GT-232] p 7 A88-11125
Flow in a model turbine stator p 55 N88-11163

THRUST AUGMENTATION

- Similarity of ejector wall-pressure distributions p 49 A88-12294

TILT ROTOR AIRCRAFT

- Recent tilt rotor flight control law innovations p 36 A88-12646

TILT ROTOR RESEARCH AIRCRAFT PROGRAM

- Flight research at NASA Ames Research Center: A test pilot's perspective [NASA-TM-100025] p 25 N88-10788

TIME DEPENDENCE

- 3D inelastic analysis methods for hot section components p 55 N88-11164

TIME MARCHING

- Global marching technique for predicting separated flows over arbitrary airfoils p 14 A88-12293

TOMOGRAPHY

- Neutron and positron techniques for fluid transfer system analysis and remote temperature and stress measurement [ASME PAPER 87-GT-219] p 48 A88-11116

TORQUEMETERS

- Analysis of free molecular effects on the attitude of satellites in geostationary transfer orbit. Part 2: Force and torque measurement in free molecular wind tunnel tests [DFVLR-IB-222-86-A-07] p 40 N88-10078

TRACE ELEMENTS

- Labyrinth seal flow measurement by tracer gas injection [ASME PAPER 87-GT-187] p 47 A88-11092

TRACKING PROBLEM

- Towards the design of an intelligent aerospace system [AIAA PAPER 87-2844] p 26 A88-12569

TRAILING EDGES

- Arbitrary wings of low aspect ratio in subsonic flow p 3 A88-10660
The base pressure and loss of a family of four turbine blades [ASME PAPER 87-GT-202] p 7 A88-11106
Viscid/inviscid interaction analysis of subsonic turbulent trailing-edge flows p 14 A88-12282

TRAINING AIRCRAFT

- Altitude tests of the XF3-30 turbofan [ASME PAPER 87-GT-25] p 28 A88-10987
Development of the XF3-30 turbofan engine [ASME PAPER 87-GT-26] p 28 A88-10988

TRAJECTORY ANALYSIS

- Approach trajectory planning system for maximum concealment [NASA-TM-88258] p 60 N88-11435

TRANSDUCERS

- Optical systems for gas turbine engines p 49 A88-12657

TRANSFER ORBITS

- Analysis of free molecular effects on the attitude of satellites in geostationary transfer orbit. Part 2: Force and torque measurement in free molecular wind tunnel tests [DFVLR-IB-222-86-A-07] p 40 N88-10078

TRANSIENT RESPONSE

- Application of the transient test technique to measure local heat transfer coefficients associated with augmented airfoil cooling passages [ASME PAPER 87-GT-212] p 47 A88-11112

TRANSMISSION EFFICIENCY

- Transmission efficiency in advanced aerospace powerplant [PNR90391] p 53 N88-11133

TRANSMISSION LINES

- Extended systems of variable structure with mobile radio-communication objects p 44 A88-10726

TRANSMISSIONS (MACHINE ELEMENTS)

- Transmission efficiency in advanced aerospace powerplant [PNR90391] p 53 N88-11133
Improved oil-off survivability of tapered roller bearings [NASA-CR-180804] p 53 N88-11135

TRANSONIC COMPRESSORS

- Verification of compressor data accuracy by uncertainty analysis and testing methods [ASME PAPER 87-GT-165] p 30 A88-11076
Characterization of shock wave end wall boundary layer interactions in a transonic compressor rotor [ASME PAPER 87-GT-166] p 6 A88-11077
The aeromechanical response of an advanced transonic compressor to inlet distortion [ASME PAPER 87-GT-189] p 31 A88-11094

TRANSONIC FLIGHT

- An aerodynamic design study of transonic transport wings p 15 A88-13078

TRANSONIC FLOW

- Multigrid solution of the Euler equations on unstructured and adaptive meshes p 44 A88-10570
Numerical solution of stream function equations in transonic flows [ASME PAPER 87-GT-18] p 3 A88-10983
Navier-Stokes solution for steady two-dimensional transonic cascade flows [ASME PAPER 87-GT-54] p 4 A88-11005
Shock embedding discontinuous solution of elliptic equation for inverse problem of transonic S2 flow [ASME PAPER 87-GT-115] p 5 A88-11043
The performance estimation of transonic turbine at design and off-design conditions [ASME PAPER 87-GT-148] p 30 A88-11066
Numerical computation of non-isentropic potential equations for transonic cascade flows [ASME PAPER 87-GT-159] p 5 A88-11071
A multi-grid algorithm for 2-D transonic potential cascade flow [ASME PAPER 87-GT-180] p 6 A88-11088
The base pressure and loss of a family of four turbine blades [ASME PAPER 87-GT-202] p 7 A88-11106
Transonic expansions p 13 A88-12059
Refined numerical solution of the transonic flow past a wedge p 14 A88-12280
Two-dimensional transonic aerodynamic design method p 14 A88-12284
Transonic analysis and design of axisymmetric bodies in nonuniform flow [NASA-CR-4101] p 16 N88-10013
A method for the calculation of transonic flows for the control of adaptive wind tunnels [ETN-87-90411] p 17 N88-10015
Computation of transonic separated wing flows using an Euler/Navier-Stokes zonal approach [NASA-TM-88311] p 52 N88-11089

TRANSONIC SPEED

- Comparison of wind tunnel and flight test afterbody and nozzle pressures for a twin-jet fighter aircraft at transonic speeds [NASA-TP-2588] p 17 N88-10765
Effect of empennage arrangement on single-engine nozzle/afterbody static pressures at transonic speeds [NASA-TP-2753] p 17 N88-10771

TRANSONIC WIND TUNNELS

- A method for the calculation of transonic flows for the control of adaptive wind tunnels [ETN-87-90411] p 17 N88-10015
Investigation of the suitability of the 8ft x 6ft transonic wind-tunnel for aeroacoustic research on propellers [RAE-TM-AERO-2093] p 39 N88-10041
Wall interference tests of a CAST 10-2/DOA 2 airfoil in an adaptive-wall test section [NASA-TM-4015] p 18 N88-10772
Integration effects of D-shaped, underwing, aft-mounted, separate-flow, flow-through nacelles on a high-wing transport [NASA-TM-4018] p 18 N88-10773

TRANSPORT AIRCRAFT

- An integrated display for vertical situation awareness in commercial transport aircraft
[SAE PAPER 861770] p 57 A88-10158
- An Orient Express to capture the market
p 1 A88-10370
- The impact of modern technology on aircraft avionics equipment
p 26 A88-10679
- Flight director guidance for MLS
p 21 A88-10874
- The Antonov An-74 brings high tech to low temperatures
p 23 A88-10876
- High-lift-device design and low-speed wind-tunnel test
p 15 A88-13079
- Full-scale transport controlled impact demonstration program
[NASA-TM-89642] p 19 A88-10021
- Integration effects of D-shaped, underwing, aft-mounted, separate-flow, flow-through nacelles on a high-wing transport
[NASA-TM-4018] p 18 A88-10773

TRANSPORT THEORY

- Numerical solutions of scramjet nozzle flows
p 2 A88-10359

TURBINE BLADES

- A simplified method for 3-D potential flow in turbomachinery using vortex sheet boundary conditions
[ASME PAPER 87-GT-28] p 3 A88-10989
- Friction damping of random vibration in gas turbine engine airfoils
[ASME PAPER 87-GT-44] p 29 A88-10996
- Procedures for determining surface heat flux using thin film gauges on a coated metal model in a transient test facility
[ASME PAPER 87-GT-95] p 45 A88-11034
- A qualitative method for determining the temperature pattern of run gas turbine blades
[ASME PAPER 87-GT-102] p 45 A88-11037
- Computer predictions of erosion damage in gas turbines
[ASME PAPER 87-GT-127] p 46 A88-11054
- A discussion of the mean S2 stream surfaces applied to quasi-three-dimensional calculation programs for turbomachinery design
[ASME PAPER 87-GT-150] p 5 A88-11067
- Unified equation of motion (UEM) approach as applied to S1 turbomachinery problems
[ASME PAPER 87-GT-179] p 6 A88-11087
- Applications of ceramic coating on the turbine blades of the AGTJ-100B
[ASME PAPER 87-GT-190] p 41 A88-11095
- Film cooling of a turbine blade with injection through two rows of holes in the near-endwall region
[ASME PAPER 87-GT-196] p 47 A88-11100
- The base pressure and loss of a family of four turbine blades
[ASME PAPER 87-GT-202] p 7 A88-11106
- The turbomachine blading design achieved by solving the inverse field problem
[ASME PAPER 87-GT-215] p 31 A88-11113
- Development and application of a high frequency wedge probe
[ASME PAPER 87-GT-216] p 47 A88-11114
- A trade-off study of rotor tip clearance flow in a turbine/exhaust diffuser system
[ASME PAPER 87-GT-229] p 32 A88-11123
- Modeling and measurement of heat transfer on turbine blade tips
p 33 A88-10032
- Investigation of the excitation of turbine blade vibration in axial compressors in rotating stall
[ETN-87-90377] p 34 A88-10035
- Experimental determination of the oscillatory forces on two turbine blade profiles
[ETN-87-90417] p 34 A88-10037
- Blade loss transient dynamics analysis, volume 1. Task 2: TETRA 2 theoretical development
[NASA-CR-179632] p 34 A88-10791
- Blade loss transient dynamics analysis, volume 2. Task 2: TETRA 2 user's manual
[NASA-CR-179633] p 34 A88-10792
- Turbine Engine Hot Section Technology, 1985
[NASA-CP-2405] p 53 A88-11140
- Development of heat flux sensors for turbine airfoils
p 54 A88-11143
- Prediction of turbine blade heat transfer
p 54 A88-11162
- 3D inelastic analysis methods for hot section components
p 55 A88-11164
- 3-D inelastic analysis methods for hot section components
p 60 A88-11165
- Component specific modeling
p 60 A88-11166
- Constitutive modeling of superalloy single crystals with verification testing
p 43 A88-11169
- Constitutive modeling for isotropic materials
p 55 A88-11171
- Constitutive modeling for isotropic materials
p 55 A88-11172

- Experimental verification of vapor deposition rate theory in high velocity burner rigs
p 43 A88-11179
- Thermal expansion mismatch and oxidation in thermal barrier coatings
p 56 A88-11182

TURBINE ENGINES

- Electronic trend monitoring and exceedance recording systems - A means to improved turbine engine reliability
[ASME PAPER 87-GT-87] p 29 A88-11027
- Time-averaged heat-flux distributions and comparison with prediction for the Teledyne 702 HP turbine stage
[ASME PAPER 87-GT-120] p 30 A88-11048
- Introduction and application of the General Electric turbine engine monitoring software within KLM Royal Dutch Airlines
[ASME PAPER 87-GT-167] p 30 A88-11078
- Applied reliability/maintainability methodology as a function within life cycle cost --- of aircraft turbine engine
[ASME PAPER 87-GT-172] p 46 A88-11082
- Plume infrared signature measurements and comparison with a theoretical model --- of turboshaft engines
p 33 A88-12836
- Blade loss transient dynamics analysis, volume 1. Task 2: TETRA 2 theoretical development
[NASA-CR-179632] p 34 A88-10791
- Blade loss transient dynamics analysis, volume 2. Task 2: TETRA 2 user's manual
[NASA-CR-179633] p 34 A88-10792
- Development of heat flux sensors for turbine airfoils
p 54 A88-11143
- Thermal barrier coating life prediction model development
p 56 A88-11185

TURBINE EXHAUST NOZZLES

- High-temperature sheet materials for gas turbine applications
p 42 A88-12635

TURBINE INSTRUMENTS

- Optical systems for gas turbine engines
p 49 A88-12657

TURBINE WHEELS

- Localization of natural modes of vibration in bladed disks
[ASME PAPER 87-GT-46] p 29 A88-10998
- Developments in disc materials --- for gas turbine engines
p 42 A88-12632

TURBOCOMPRESSORS

- Through-flow analysis of a multi-stage compressor operating at near-stall conditions
[ASME PAPER 87-GT-51] p 4 A88-11003
- A new method (FTDCDF) for blade design of axial/mixed-flow compressors and its applications
[ASME PAPER 87-GT-183] p 31 A88-11090
- Modelling the unsteady flow in a turbine rotor passage
[ASME PAPER 87-GT-197] p 7 A88-11101
- Development and application of a high frequency wedge probe
[ASME PAPER 87-GT-216] p 47 A88-11114
- Inter and intra blade row laser velocimetry studies of gas turbine compressor flows
[ASME PAPER 87-GT-235] p 7 A88-11126
- Modeling and measurement of heat transfer on turbine blade tips
p 33 A88-10032
- Investigation of the excitation of turbine blade vibration in axial compressors in rotating stall
[ETN-87-90377] p 34 A88-10035

TURBOFAN AIRCRAFT

- Altitude tests of the XF3-30 turbofan
[ASME PAPER 87-GT-25] p 28 A88-10987

TURBOFAN ENGINES

- Counterrotating differential cylindrical roller bearing development
[AIAA PAPER 87-1843] p 43 A88-10497
- Altitude tests of the XF3-30 turbofan
[ASME PAPER 87-GT-25] p 28 A88-10987
- Development of the XF3-30 turbofan engine
[ASME PAPER 87-GT-26] p 28 A88-10988
- Investigation of integrated selection of optimum engine cycle parameters
[ASME PAPER 87-GT-39] p 29 A88-10993
- First article test noise survey of the A/F32T-9 large turbo fan engine enclosed noise suppressor system, Sky Harbor IAP (International Airport), Phoenix, Arizona
[AD-A183799] p 61 A88-10588
- The wide chord fan blade: A Rolls Royce first
[PNR90416] p 34 A88-10789

TURBOJET ENGINES

- Investigation of integrated selection of optimum engine cycle parameters
[ASME PAPER 87-GT-39] p 29 A88-10993

TURBOMACHINE BLADES

- A generalized numerical method for solving direct inverse and hybrid problems of blade cascade flow by using streamline-co-ordinate equation
[ASME PAPER 87-GT-29] p 4 A88-10990

TURBOMACHINERY

- Explicit multigrad algorithm for quasi-three-dimensional viscous flows in turbomachinery
p 2 A88-10355

- Three-dimensional flow in a rotor - A strictly three-dimensional calculation of flows in turbomachines using the S1-S2 method
p 44 A88-10628
- Prediction of turbulent source flow between corotating disks with an anisotropic two-equation turbulence model
[ASME PAPER 87-GT-73] p 45 A88-11017
- Three-dimensional calculation of wall boundary layer flows in turbomachines
[ASME PAPER 87-GT-82] p 4 A88-11022
- A discussion of the mean S2 stream surfaces applied to quasi-three-dimensional calculation programs for turbomachinery design
[ASME PAPER 87-GT-150] p 5 A88-11067
- Unified equation of motion (UEM) approach as applied to S1 turbomachinery problems
[ASME PAPER 87-GT-179] p 6 A88-11087
- The turbomachine blading design achieved by solving the inverse field problem
[ASME PAPER 87-GT-215] p 31 A88-11113
- A method for calculating turbulent boundary layers and losses in the flow channels of turbomachines
[ASME PAPER 87-GT-225] p 7 A88-11121
- Optical flow diagnostic measurements in turbomachinery
[PNR90396] p 52 A88-11081

TURBOPROP AIRCRAFT

- Noise of a model high speed counterrotation propeller at simulated takeoff/approach conditions (F7/A7)
[NASA-TM-100206] p 61 A88-10592

TURBOPROP ENGINES

- Velocity scaled aeroelastic testing of advanced turboprops
[ASME PAPER 87-GT-209] p 31 A88-11110
- Advanced turboprop wing installation effects measured by unsteady blade pressure and noise
[NASA-TM-100200] p 15 A88-10008

TURBOSHAPTS

- Plume infrared signature measurements and comparison with a theoretical model --- of turboshaft engines
p 33 A88-12836
- The design of a turboshaft speed governor using modern control techniques
[NASA-CR-175046] p 51 A88-10339

TURBULENCE

- Impact of turbulence modeling on numerical accuracy and efficiency of compressible flow simulations
[NASA-TM-88333] p 52 A88-11088
- Prediction of turbine blade heat transfer
p 54 A88-11162
- Flow in a model turbine stator
p 55 A88-11163

TURBULENCE EFFECTS

- Imaging through the atmosphere for airborne reconnaissance
p 27 A88-12748

TURBULENT BOUNDARY LAYER

- Pressure field due to drag reducing outer layer devices in turbulent boundary layers
p 3 A88-10492
- Three-dimensional calculation of wall boundary layer flows in turbomachines
[ASME PAPER 87-GT-82] p 4 A88-11022
- Modelling the unsteady flow in a turbine rotor passage
[ASME PAPER 87-GT-197] p 7 A88-11101
- Comparison of predicted and measured velocities in a compressor disk drum model
[ASME PAPER 87-GT-208] p 47 A88-11109
- A study of the effects of thermal barrier coating surface roughness on the boundary layer characteristics of gas-turbine airfoils
[ASME PAPER 87-GT-223] p 48 A88-11120
- A method for calculating turbulent boundary layers and losses in the flow channels of turbomachines
[ASME PAPER 87-GT-225] p 7 A88-11121
- Particle transport across the transpired turbulent boundary layer
[ASME PAPER 87-GT-265] p 48 A88-11142
- Heat transfer with very high free stream turbulence
p 54 A88-11161

TURBULENT DIFFUSION

- Applicability of a diffusion combustion model to the analysis of supersonic turbulent reacting jets
p 40 A88-10180

TURBULENT FLOW

- Cascade viscous flow analysis using the Navier-Stokes equations
p 2 A88-10356
- Prediction of turbulent source flow between corotating disks with an anisotropic two-equation turbulence model
[ASME PAPER 87-GT-73] p 45 A88-11017
- Numerical prediction of turbulent flow in rotating cavities
[ASME PAPER 87-GT-74] p 45 A88-11018
- Numerical solution of three-dimensional turbulent flows for modern gas turbine components
[ASME PAPER 87-GT-84] p 4 A88-11024
- Effect of rib angle on local heat/mass transfer distribution in a two-pass rib-roughened channel
[ASME PAPER 87-GT-94] p 45 A88-11033

V

- Flow investigations on swirling compressible flow through a vaneless radial diffuser
[ASME PAPER 87-GT-193] p 7 A88-11097
- A method for calculating turbulent boundary layers and losses in the flow channels of turbomachines
[ASME PAPER 87-GT-225] p 7 A88-11121
- Boundary layer profile investigations downstream of an aero-engine intake anti-icing air exhaust slot
[ASME PAPER 87-GT-237] p 32 A88-11127
- Viscid/inviscid interaction analysis of subsonic turbulent trailing-edge flows p 14 A88-12282
- Measurement techniques in low-speed turbulent flows: A report on EUROMECH 202
[NLR-MP-86038-U] p 51 N88-10283
- Fuel-injector/air-swirl characterization p 54 N88-11150

TURBULENT JETS

- Heat transfer to arrays of impinging jets in a crossflow
[ASME PAPER 87-GT-198] p 47 A88-11102

TURBULENT MIXING

- Parabolized Navier-Stokes analysis of ducted supersonic combustion problems p 2 A88-10361
- Strong gas injection into supersonic flow with turbulent mixing p 13 A88-12056

TURBULENT WAKES

- Experiments on spray interactions in the wake of a bluff body
[ASME PAPER 87-GT-48] p 44 A88-11000
- Modelling the unsteady flow in a turbine rotor passage
[ASME PAPER 87-GT-197] p 7 A88-11101
- A natural low frequency oscillation in the wake of an airfoil near stalling conditions
[NASA-TM-100213] p 18 N88-10779

TWISTING

- Aircraft and equipment factors in the occurrence of suspension line twists with U.S. Army parachutes p 19 A88-12644

TWO DIMENSIONAL BOUNDARY LAYER

- Prediction of turbine blade heat transfer p 54 N88-11162

TWO DIMENSIONAL FLOW

- A new method of calculating optimum velocity distribution along the blade surface on arbitrary stream surface of revolution in turbomachines
[ASME PAPER 87-GT-30] p 4 A88-10991
- Navier-Stokes solution for steady two-dimensional transonic cascade flows
[ASME PAPER 87-GT-54] p 4 A88-11005
- A smoke-wire study of low Reynolds number flow over a NASA LRN(1) - 1007 airfoil section p 9 A88-11181
- On the determination of the 2-D characteristics of aerofoils at low Reynolds numbers p 10 A88-11192
- Two-dimensional transonic aerodynamic design method p 14 A88-12284
- A transonic model representation for two-dimensional wall interference assessment
[NLR-TR-86026-U] p 15 N88-10006

TWO PHASE FLOW

- Analysis of supersonic heterogeneous flow impinging on an obstacle p 14 A88-12074

U

ULTRASONIC TESTS

- NDE at twelve o'clock high p 48 A88-11585

UNIFORM FLOW

- Analysis of supersonic heterogeneous flow impinging on an obstacle p 14 A88-12074

UNSTEADY FLOW

- Navier-Stokes simulations of rotor/stator interaction using patched and overlaid grids p 2 A88-10354
- Multigrid localization and multigrid grid generation for the computation of vortex structures and dynamics of flows in cavities and about airfoils p 3 A88-10562
- Modelling the unsteady flow in a turbine rotor passage
[ASME PAPER 87-GT-197] p 7 A88-11101
- Development and application of a high frequency wedge probe
[ASME PAPER 87-GT-216] p 47 A88-11114
- Unsteady aerodynamic measurements on a rotating compressor blade row at low Mach number
[ASME PAPER 87-GT-221] p 7 A88-11118
- An analysis of unsteady, two-dimensional separation bubbles p 9 A88-11182
- On some unsteady aerodynamics characteristics of an NACA 0012 at Reynolds numbers of 125,000 and 400,000 p 10 A88-11189
- Advanced turboprop wing installation effects measured by unsteady blade pressure and noise
[NASA-TM-100200] p 15 N88-10008

USER MANUALS (COMPUTER PROGRAMS)

- Blade loss transient dynamics analysis, volume 2. Task 2: TETRA 2 user's manual
[NASA-CR-179633] p 34 N88-10792

V/STOL AIRCRAFT

- Flight research at NASA Ames Research Center: A test pilot's perspective
[NASA-TM-100025] p 25 N88-10788

VANELESS DIFFUSERS

- Flow investigations on swirling compressible flow through a vaneless radial diffuser
[ASME PAPER 87-GT-193] p 7 A88-11097

VANES

- Use of a liquid-crystal and heater-element composite for quantitative, high-resolution heat-transfer coefficients on a turbine airfoil including turbulence and surface-roughness effects p 44 A88-10969
- Compressor turbine vane ring (PT6 engine) repair development
[ASME PAPER 87-GT-47] p 29 A88-10999
- Turbine Engine Hot Section Technology, 1985
[NASA-CP-2405] p 53 N88-11140
- Development of heat flux sensors for turbine airfoils p 54 N88-11143
- Component specific modeling p 60 N88-11166
- Constitutive modeling for isotropic materials p 55 N88-11172

VAPOR DEPOSITION

- Experimental verification of vapor deposition rate theory in high velocity burner rigs p 43 N88-11179

VARIABLE CYCLE ENGINES

- Multimodes to Mach 5 p 28 A88-10371

VARIABLE GEOMETRY STRUCTURES

- Off-design performance of supersonic compressors with fixed and variable geometry
[ASME PAPER 87-GT-116] p 5 A88-11044

VELOCITY

- Analytical modeling of helicopter static and dynamic induced velocity in GRASP
[NASA-TM-100026] p 18 N88-10777

VELOCITY DISTRIBUTION

- A new method of calculating optimum velocity distribution along the blade surface on arbitrary stream surface of revolution in turbomachines
[ASME PAPER 87-GT-30] p 4 A88-10991
- Analysis of windage losses and velocity distribution for a shrouded rotating disk
[ASME PAPER 87-GT-186] p 6 A88-11091
- Comparison of predicted and measured velocities in a compressor disk drum model
[ASME PAPER 87-GT-208] p 47 A88-11109
- Velocity scaled aeroelastic testing of advanced turboprops
[ASME PAPER 87-GT-209] p 31 A88-11110

VELOCITY MEASUREMENT

- Development and application of a high frequency wedge probe
[ASME PAPER 87-GT-216] p 47 A88-11114
- Airspeed measurement with a CO₂ lidar p 26 A88-12655
- An observer approach to the estimation of helicopter airspeed
[DFVLR-FB-87-13] p 25 N88-10029

VERTICAL ORIENTATION

- An integrated display for vertical situation awareness in commercial transport aircraft
[SAE PAPER 861770] p 57 A88-10158

VERTICAL TAKEOFF AIRCRAFT

- Digital controls for gas turbine engines
[ASME PAPER 87-GT-211] p 31 A88-11111

VIBRATION

- Investigation of the excitation of turbine blade vibration in axial compressors in rotating stall
[ETN-87-90377] p 34 N88-10035
- Activities report of the Institute of Sound and Vibration Research
[ETN-87-90685] p 61 N88-10589

VIBRATION DAMPING

- Friction damping of random vibration in gas turbine engine airfoils
[ASME PAPER 87-GT-44] p 29 A88-10996
- An optimal control method for passage of a flexible rotor through resonances p 48 A88-11439

VIBRATIONAL SPECTRA

- Diagnosis of flow channel in aircraft gas-turbine engines on basis of vibration spectrum characteristics p 35 N88-10993

VIBRATORY LOADS

- Experimental determination of the oscillatory forces on two turbine blade profiles
[ETN-87-90417] p 34 N88-10037

VIDEO DATA

- Video data link provides television pictures in near real time via tactical radio and satellite channels p 49 A88-12732
- Synchronizing video signals to standard IRIG time codes p 21 A88-12737

VISCOUS FLOW

- Explicit multigrid algorithm for quasi-three-dimensional viscous flows in turbomachinery p 2 A88-10355
- Cascade viscous flow analysis using the Navier-Stokes equations p 2 A88-10356
- The design of shock-free compressor cascades including viscous boundary layer effects
[ASME PAPER 87-GT-71] p 4 A88-11015
- An analysis of unsteady, two-dimensional separation bubbles p 9 A88-11182
- The calculation of flow about aerofoils at low Reynolds number with application to remotely piloted vehicles p 11 A88-11197

VOLATILITY

- Cost savings possible with Air Force conversion to JP-8 as its primary fuel
[AD-A183784] p 42 N88-10192

VORTEX GENERATORS

- Further visualization of combined wing tip and starting vortex systems p 14 A88-12276

VORTEX SHEETS

- A simplified method for 3-D potential flow in turbomachinery using vortex sheet boundary conditions
[ASME PAPER 87-GT-28] p 3 A88-10989

VORTICES

- Multigrid localization and multigrid grid generation for the computation of vortex structures and dynamics of flows in cavities and about airfoils p 3 A88-10562
- Further visualization of combined wing tip and starting vortex systems p 14 A88-12276
- The development of wing theory p 14 A88-12483

VORTICITY

- Momentum exchanges and energy transfers in cross flow fans
[ASME PAPER 87-GT-32] p 44 A88-10992

W

WALL FLOW

- A new method of calculating optimum velocity distribution along the blade surface on arbitrary stream surface of revolution in turbomachines
[ASME PAPER 87-GT-30] p 4 A88-10991
- Three-dimensional calculation of wall boundary layer flows in turbomachines
[ASME PAPER 87-GT-82] p 4 A88-11022
- Characterization of shock wave end wall boundary layer interactions in a transonic compressor rotor
[ASME PAPER 87-GT-166] p 6 A88-11077
- Wall interference tests of a CAST 10-2/DOA 2 airfoil in an adaptive-wall test section
[NASA-TM-4015] p 18 N88-10772

WALL PRESSURE

- Pressure field due to drag reducing outer layer devices in turbulent boundary layers p 3 A88-10492
- Similarity of ejector wall-pressure distributions p 49 A88-12294

WALL TEMPERATURE

- Prediction of gas turbine combustor-liner temperature
[ASME PAPER 87-GT-177] p 31 A88-11085

WEAPON SYSTEMS

- Design principles and practices for implementation of MIL-STD-1760 in aircraft and stores
[AD-A183724] p 24 N88-10027

WEAPONS DELIVERY

- Robotic air vehicle - A pilot's perspective p 19 A88-10437

WEAR TESTS

- Counterrotating differential cylindrical roller bearing development
[AIAA PAPER 87-1843] p 43 A88-10497

WEDGE FLOW

- Refined numerical solution of the transonic flow past a wedge p 14 A88-12280

WEIBULL DENSITY FUNCTIONS

- Development of ceramic hot section components for AGT 100 gas turbine
[ASME PAPER 87-GT-79] p 45 A88-11019

WEIGHT REDUCTION

- The use of Kevlar on aero-engine fan containment casings
[PNR90410] p 53 N88-11134

WEST GERMANY

- The history of aeroelasticity research in Germany from the beginning until 1945 --- airframes
[DFVLR-MITT-86-25] p 1 N88-10003

WIND (METEOROLOGY)

- Global positioning satellite-based automatic landing system and wind estimated feedback for the AH-64 helicopter p 22 N88-10784

WIND MEASUREMENT

- Analyses and assessments of span wise gust gradient data from NASA B-57B aircraft
[NASA-CR-178288] p 15 N88-10007

WIND SHEAR

WIND SHEAR

Contributions to the modeling of wind shear for danger studies
[ETN-87-90442] p 57 N88-10463

WIND TUNNEL APPARATUS

Dynamic wind tunnel balances in the DFVLR subsonic wind tunnel in Braunschweig p 39 A88-12488
A method for the calculation of transonic flows for the control of adaptive wind tunnels
[ETN-87-90411] p 17 N88-10015

WIND TUNNEL MODELS

Possibilities for the modeling of dynamically loaded cylindrical structural parts in the wind tunnel
[KU-SFB-210/T/24] p 15 N88-10005
A transonic model representation for two-dimensional wall interference assessment
[NLR-TR-86026-U] p 15 N88-10006
Flutter suppression and gust load alleviation. Part 1: Results of phase 1 to 3. Part 2: Description of the Garteur model
[MBB-LKE292/S/PUB/191] p 36 N88-10038
Comparison of wind tunnel and flight test afterbody and nozzle pressures for a twin-jet fighter aircraft at transonic speeds
[NASA-TP-2588] p 17 N88-10765

WIND TUNNEL STABILITY TESTS

Aerodynamics of unmanned aircraft at full-scale in the RAE 24ft wind-tunnel p 12 A88-11204

WIND TUNNEL TESTS

Theoretical and experimental analysis of a compressor cascade at supercritical flow conditions
[ASME PAPER 87-GT-256] p 8 A88-11136
Boundary layer and performance characteristics from wind tunnel tests of a low Reynolds number Liebeck airfoil p 9 A88-11184
Transition and separation control on a low-Reynolds number airfoil p 9 A88-11186
Low Reynolds number wind tunnel measurements - The importance of being earnest p 10 A88-11190
Recent wind tunnel experiments at low Reynolds numbers p 11 A88-11193
Low-Reynolds number aerodynamics research at NASA Langley Research Center p 11 A88-11194
The use of wind tunnel data in the design of radio controlled contest model sailplanes p 24 A88-11195
Wind tunnel testing of small scale pressure tapped model propellers p 32 A88-11196
Preliminary measurements of the flight performance of an RPV compared with wind tunnel and CFD estimates p 12 A88-11203
Wind-tunnel test results of Eppler 387 aerofoils and comparisons with flight test and computation p 12 A88-11208
Development and implementation of an aerodynamic holographic interferometry system p 49 A88-12725
Wind-tunnel investigation of a full-scale general aviation airplane equipped with an advanced natural laminar flow wing
[NASA-TP-2772] p 16 N88-10009
Investigations of separated flow states on wings of medium aspect ratio taking into account the wind tunnel interference problem p 17 N88-10016
Investigation of the suitability of the 8ft x 6ft transonic wind-tunnel for aeroacoustic research on propellers
[RAE-TM-AERO-2093] p 39 N88-10041
Analysis of free molecular effects on the attitude of satellites in geostationary transfer orbit. Part 2: Force and torque measurement in free molecular wind tunnel tests
[DFVLR-IB-222-86-A-07] p 40 N88-10078
Experience about the application and valuation of roughness strips for boundary layer transition control in wind tunnel tests in the high-speed range
[ESA-TT-1028] p 51 N88-10278
Comparison of wind tunnel and flight test afterbody and nozzle pressures for a twin-jet fighter aircraft at transonic speeds
[NASA-TP-2588] p 17 N88-10765

Wall interference tests of a CAST 10-2/DOA 2 airfoil in an adaptive-wall test section
[NASA-TM-4015] p 18 N88-10772
Integration effects of D-shaped, underwing, aft-mounted, separate-flow, flow-through nacelles on a high-wing transport
[NASA-TM-4018] p 18 N88-10773

WIND TUNNEL WALLS

A transonic model representation for two-dimensional wall interference assessment
[NLR-TR-86026-U] p 15 N88-10006
Wall interference tests of a CAST 10-2/DOA 2 airfoil in an adaptive-wall test section
[NASA-TM-4015] p 18 N88-10772

WIND TUNNELS

Momentum exchanges and energy transfers in cross flow fans
[ASME PAPER 87-GT-32] p 44 A88-10992

Boundary layer profile investigations downstream of an aero-engine intake anti-icing air exhaust slot
[ASME PAPER 87-GT-237] p 32 A88-11127
Particle transport across the transpired turbulent boundary layer
[ASME PAPER 87-GT-265] p 48 A88-11142
Possibilities for the modeling of dynamically loaded cylindrical structural parts in the wind tunnel
[KU-SFB-210/T/24] p 15 N88-10005

WINDSHIELDS

The deviation of light rays passing through a curved windscreen --- aircraft
[BAE-MS-115] p 62 N88-10610

WING FLAPS

Design and fabrication trial of a composite flap structure p 1 A88-13082

WING PLANFORMS

An experimental investigation of the aerodynamics of the hang glider p 11 A88-11200
Further visualization of combined wing tip and starting vortex systems p 14 A88-12276
Exact and asymptotic expressions of the lift slope coefficient of an elliptic wing p 14 A88-12292

WING PROFILES

Arbitrary wings of low aspect ratio in subsonic flow p 3 A88-10660
A theoretical study of spanwise-periodic 3-D disturbances in the wake of a slightly stalled wing at low Reynolds numbers p 8 A88-11180
Control surface effects on the low Reynolds number behavior of the Wortmann FX 63-137 p 10 A88-11187

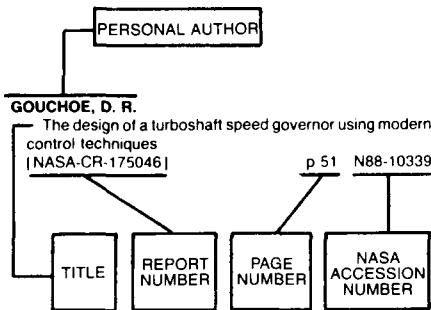

WING TIP VORTICES

Further visualization of combined wing tip and starting vortex systems p 14 A88-12276
Dispersion in the wake of aircraft: An investigation of the effects of a ground plane on trailing vortices. Literature survey
[IC-AERO-REP-86-04] p 16 N88-10014

WINGS

Prediction of a microlight biplane's aerofoil performance using a computer model p 11 A88-11198
Aerodynamics of unmanned aircraft at full-scale in the RAE 24ft wind-tunnel p 12 A88-11204
The development of wing theory p 14 A88-12483
Wing design with a three-dimensional transonic inverse method p 14 A88-13077
An aerodynamic design study of transonic transport wings p 15 A88-13078
Advanced turboprop wing installation effects measured by unsteady blade pressure and noise
[NASA-TM-100200] p 15 N88-10008
Wind-tunnel investigation of a full-scale general aviation airplane equipped with an advanced natural laminar flow wing
[NASA-TP-2772] p 16 N88-10009
Computation of transonic separated wing flows using an Euler/Navier-Stokes zonal approach
[NASA-TM-88311] p 52 N88-11089
AGARD standard aeroelastic configurations for dynamic response. Candidate configuration I-wing 445.6
[NASA-TM-100492] p 56 N88-11202

Typical Personal Author Index Listing

Listings in this index are arranged alphabetically by personal author. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document listed (e.g., NASA report, translation, NASA contractor report). The page and accession numbers are located beneath and to the right of the title. Under any one author's name the accession numbers are arranged in sequence with the AIAA accession numbers appearing first.

A

- ABBITT, J. D.**
A smoke-wire study of low Reynolds number flow over a NASA LRN(1) - 1007 airfoil section p 9 A88-11181
- ABBOTT, KATHY H.**
Traditional versus rule-based programming techniques - Application to the control of optional flight information p 58 A88-10965
- Implementation of a research prototype onboard fault monitoring and diagnosis system [AIAA PAPER 87-2777] p 59 A88-12540
- ABDALLAH, S.**
Unified equation of motion (UEM) approach as applied to S1 turbomachinery problems [ASME PAPER 87-GT-179] p 6 A88-11087
- ABDEL MESSEH, W.**
Application of the transient test technique to measure local heat transfer coefficients associated with augmented airfoil cooling passages [ASME PAPER 87-GT-212] p 47 A88-11112
- ABIR, A.**
Stability of conical and curved annular diffusers for mixed-flow compressors [ASME PAPER 87-GT-191] p 6 A88-11096
- ACKERMANN, J.**
Robust control system design p 37 N88-10800
- AGRAWAL, D. P.**
Flow investigations on swirling compressible flow through a vaneless radial diffuser [ASME PAPER 87-GT-193] p 7 A88-11097
- AILSLIEGER, ROSS E.**
Low cost windowless cockpit research vehicle [SAE PAPER 861755] p 39 A88-10156
- ALBERGA, D. G.**
Comparison of predicted and measured velocities in a compressor disk drum model [ASME PAPER 87-GT-208] p 47 A88-11109
- ALDER, H. P.**
Hydrogen in air transportation - Feasibility study for Zurich Airport, Switzerland p 41 A88-11146
- ALEKHIN, V. I.**
Computing complex for a system for the radio-acoustic sounding of the atmosphere - Hardware facilities p 58 A88-11394

- ALEKSANDROV, VIKTOR MIKHAILOVICH**
Problems in continuum mechanics with mixed boundary conditions p 43 A88-10017
- ALLEN, J. L.**
A study of the effects of thermal barrier coating surface roughness on the boundary layer characteristics of gas-turbine aerofoils [ASME PAPER 87-GT-223] p 48 A88-11120
- ALTHAUS, DIETER**
Recent wind tunnel experiments at low Reynolds numbers p 11 A88-11193
- AMANO, KANICHI**
Wing design with a three-dimensional transonic inverse method p 14 A88-13077
- An aerodynamic design study of transonic transport wings p 15 A88-13078
- High-lift-device design and low-speed wind-tunnel test p 15 A88-13079
- ANDO, SHIGENORI**
A numerical method for subsonic unsteady lifting surfaces - BIS. III - Some additional numerical results p 2 A88-10093
- AOANO, H.**
Cyclic spinning testing of aero-engine discs [ASME PAPER 87-GT-259] p 32 A88-11139
- ARAFILOV, S. I.**
Effect of energy release in the shock layer on the supersonic flight of bodies p 13 A88-12073
- ARAI, MASASHI**
Applications of ceramic coating on the turbine blades of the AGTJ-100B [ASME PAPER 87-GT-190] p 41 A88-11095
- ARORA, S. C.**
Application of the transient test technique to measure local heat transfer coefficients associated with augmented airfoil cooling passages [ASME PAPER 87-GT-212] p 47 A88-11112
- ATKINSON, WILLIAM H.**
Development of heat flux sensors for turbine airfoils p 54 N88-11143
- AUER, JOSEPH**
FDAD - A lab/field test tool p 25 A88-10436

B

- BACHALO, W. D.**
Experiments on spray interactions in the wake of a bluff body [ASME PAPER 87-GT-48] p 44 A88-11000
- BAGANOFF, D.**
Similarity of ejector wall-pressure distributions p 49 A88-12294
- BAILEY, J. M.**
Process support compressor motor electromagnetic design summary [DE87-014359] p 52 N88-11048
- BAILEY, RICHARD S.**
The development of a high temperature static strain gage system p 53 N88-11142
- BAINES, N. C.**
A study of the effects of thermal barrier coating surface roughness on the boundary layer characteristics of gas-turbine aerofoils [ASME PAPER 87-GT-223] p 48 A88-11120
- BALUTEAU, C.**
Assessment of software quality for the AIRBUS A310 automatic pilot p 38 N88-10804
- BANDYOPADHYAY, P. R.**
Pressure field due to drag reducing outer layer devices in turbulent boundary layers p 3 A88-10492
- BANK, W.**
Further visualization of combined wing tip and starting vortex systems p 14 A88-12276
- BAR-SEVER, A.**
Transition and separation control on a low-Reynolds number airfoil p 9 A88-11186
- BARANOVSKII, S. I.**
Applicability of a diffusion combustion model to the analysis of supersonic turbulent reacting jets p 40 A88-10180
- BARNETT, MARK**
Viscid/inviscid interaction analysis of subsonic turbulent trailing-edge flows p 14 A88-12282
- BARON, SHELDON**
Intelligent interfaces to aircraft systems [AIAA PAPER 87-2776] p 59 A88-12539
- BARRETT, CHARLES A.**
The effect of variations of cobalt content on the cyclic oxidation resistance of selected Ni-base superalloys p 40 A88-10031
- BATILL, STEPHEN M.**
Low Reynolds number wind tunnel measurements - The importance of being earnest p 10 A88-11190
- BAUMBICK, R. J.**
Conceptual design of an optic based engine control system [ASME PAPER 87-GT-168] p 30 A88-11079
- BAVUSO, SALVATORE J.**
Reliability modeling of fault-tolerant computer based systems p 37 N88-10801
- BENDIKSEN, O. O.**
Localization of natural modes of vibration in bladed disks [ASME PAPER 87-GT-46] p 29 A88-10998
- BENNETT, J. C.**
Fuel-injector/air-swirl characterization p 54 N88-11150
- BERDNIKOV, VALERII NIKOLAEVICH**
Testing of aircraft electrical equipment p 39 A88-10044
- BERNHARD, R. J.**
Prediction of sound fields in cavities using boundary-element methods p 61 A88-12281
- BERTELIUD, A.**
Measurement techniques in low-speed turbulent flows: A report on EUROMECH 202 [NLR-MP-86038-U] p 51 N88-10283
- BERTIN, JOHN J.**
The aerothermodynamic environment for holes in hypersonic configurations [DE87-014651] p 17 N88-10767
- BILLIG, F. S.**
Numerical solutions of scramjet nozzle flows p 2 A88-10359
- BIRCH, STUART**
Aircraft tyres p 23 A88-10873

ZHU, XUJIN

A discussion of the mean S2 stream surfaces applied to quasi-three-dimensional calculation programs for turbomachinery design
[ASME PAPER 87-GT-150] p 5 A88-11067

ZHU, Y.

A simplified method for 3-D potential flow in turbomachinery using vortex sheet boundary conditions
[ASME PAPER 87-GT-28] p 3 A88-10989

ZHU, ZHILI

Investigation of integrated selection of optimum engine cycle parameters
[ASME PAPER 87-GT-39] p 29 A88-10993

ZHUKOVSKIY

Ensuring the service life of designs (experience in aircraft construction)
p 1 N88-10986

ZINN, BEN T.

Flame driving of longitudinal instabilities in liquid fueled dump combustors
[AD-A183536] p 33 N88-10033

ZOU, ZIXIANG

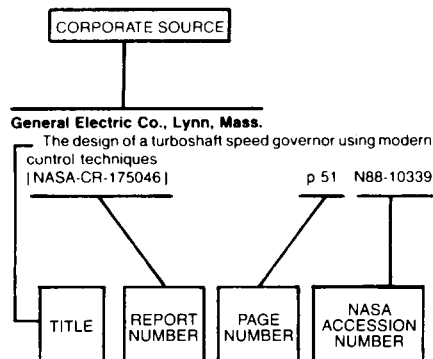

A new method of calculating optimum velocity distribution along the blade surface on arbitrary stream surface of revolution in turbomachines
[ASME PAPER 87-GT-30] p 4 A88-10991

CORPORATE SOURCE INDEX

AERONAUTICAL ENGINEERING / A Continuing Bibliography (Supplement 223)

February 1988

Typical Corporate Source Index Listing

Listings in this index are arranged alphabetically by corporate source. The title of the document is used to provide a brief description of the subject matter. The page number and the accession number are included in each entry to assist the user in locating the abstract in the abstract section. If applicable, a report number is also included as an aid in identifying the document.

A

- Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France).**
Knowledge Based Concepts and Artificial Intelligence: Applications to Guidance and Control
[AGARD-LS-155] p 38 N88-10806
- Reliability of finite element methods in North America

Comparison of wind tunnel and flight test afterbody and nozzle pressures for a twin-jet fighter aircraft at transonic speeds
[NASA-TP-2588] p 17 N88-10765

Analytical modeling of helicopter static and dynamic induced velocity in GRASP
[NASA-TM-100026] p 18 N88-10777

Flight research at NASA Ames Research Center: A test pilot's perspective
[NASA-TM-100025] p 25 N88-10788

Flight test of a resident backup software system
p 38 N88-10805

Impact of turbulence modeling on numerical accuracy and efficiency of compressible flow simulations
[NASA-TM-88333] p 52 N88-11088

Computation of transonic separated wing flows using an Euler/Navier-Stokes zonal approach
[NASA-TM-88311] p 52 N88-11089

The spatially nonuniform convergence of the numerical solution of flows
[NASA-TM-100037] p 60 N88-11429

Approach trajectory planning system for maximum concealment
[NASA-TM-88258] p 60 N88-11435

National Aeronautics and Space Administration, Flight Research Center, Edwards, Calif.

HIDEC adaptive engine control system flight evaluation results
[ASME PAPER 87-GT-257] p 32 A88-11137

National Aeronautics and Space Administration, Langley Research Center, Hampton, Va.

Flying complex approach paths using the microwave landing system
[SAE PAPER 861771] p 35 A88-10159

Evolution and application of CFD techniques for scramjet engine analysis
p 28 A88-10358

Pressure field due to drag reducing outer layer devices in turbulent boundary layers
p 3 A88-10492

Traditional versus rule-based programming techniques - Application to the control of optional flight information
p 58 A88-10965

Transition and separation control on a low-Reynolds number airfoil
p 9 A88-11186

Low-Reynolds number aerodynamics research at NASA Langley Research Center
p 11 A88-11194

Evaluation of a dual processor implementation for a fault inferring nonlinear detection system
[AIAA PAPER 87-2762] p 59 A88-12532

Implementation of a research prototype onboard fault monitoring and diagnosis system
[AIAA PAPER 87-2777] p 59 A88-12540

Wind-tunnel investigation of a full-scale general aviation airplane equipped with an advanced natural laminar flow wing
[NASA-TP-2772] p 16 N88-10009

Full-scale transport controlled impact demonstration program
[NASA-TM-89642] p 19 N88-10021

Comparison of wind tunnel and flight test afterbody and nozzle pressures for a twin-jet fighter aircraft at transonic speeds
[NASA-TP-2588] p 17 N88-10765

Effect of empennage arrangement on single-engine nozzle/afterbody static pressures at transonic speeds
[NASA-TP-2753] p 17 N88-10771

Wall interference tests of a CAST 10-2/DOA 2 airfoil in an adaptive-wall test section
[NASA-TM-4015] p 18 N88-10772

Integration effects of D-shaped, underwing, aft-mounted, separate-flow, flow-through nacelles on a high-wing transport
[NASA-TM-4018] p 18 N88-10773

The application of emulation techniques in the analysis of highly reliable, guidance and control computer systems
p 37 N88-10798

Reliability modeling of fault-tolerant computer based systems
p 37 N88-10801

AGARD standard aeroelastic configurations for dynamic response. Candidate configuration I-wing 445.6
[NASA-TM-100492] p 56 N88-11202

Helicopter main-rotor speed effects on far-field acoustic levels
[NASA-TM-100512] p 62 N88-11451

National Aeronautics and Space Administration, Lewis Research Center, Cleveland, Ohio.

The effect of variations of cobalt content on the cyclic oxidation resistance of selected Ni-base superalloys
p 40 A88-10031

Explicit multigrid algorithm for quasi-three-dimensional viscous flows in turbomachinery
p 2 A88-10355

Use of a liquid-crystal and heater-element composite for quantitative, high-resolution heat-transfer coefficients on a turbine airfoil including turbulence and surface-roughness effects
p 44 A88-10969

Application of advanced computational codes in the design of an experiment for a supersonic throughflow fan rotor
[ASME PAPER 87-GT-160] p 6 A88-11072

Conceptual design of an optic based engine control system
[ASME PAPER 87-GT-168] p 30 A88-11079

A method for calculating turbulent boundary layers and losses in the flow channels of turbomachines
[ASME PAPER 87-GT-225] p 7 A88-11121

Transition and separation control on a low-Reynolds number airfoil
p 9 A88-11186

Advanced turboprop wing installation effects measured by unsteady blade pressure and noise
[NASA-TM-100200] p 15 N88-10008

Noise of a model high speed counterrotation propeller at simulated takeoff/approach conditions (F7/A7)
[NASA-TM-100206] p 61 N88-10592

A natural low frequency oscillation in the wake of an airfoil near stalling conditions
[NASA-TM-100213] p 18 N88-10779

High temperature metal matrix composites for future aerospace systems
[NASA-TM-100212] p 43 N88-10938

Turbine Engine Hot Section Technology, 1985
[NASA-CP-2405] p 53 N88-11140

The Lewis Strain Gauge Laboratory: Status and plans
p 54 N88-11146

On the mixing of a row of jets with a confined crossflow
p 54 N88-11154

High temperature stress-strain analysis
p 55 N88-11170

Experimental verification of vapor deposition rate theory in high velocity burner rigs
p 43 N88-11179

Thermal expansion mismatch and oxidation in thermal barrier coatings
p 56 N88-11182

National Aeronautics and Space Administration, Marshall Space Flight Center, Huntsville, Ala.

A 1987 progress report of manufacturing techniques for Gravity Probe B gyroscope rotors
[NASA-TM-100312] p 53 N88-11101

National Aerospace Lab., Amsterdam (Netherlands).

A transonic model representation for two-dimensional wall interference assessment
[NLR-TR-86026-U] p 15 N88-10006

Problem and solution formulations for the generation of 3D block-structured grids
[NLR-MP-86020-U] p 25 N88-10028

Measurement techniques in low-speed turbulent flows: A report on EUROMECH 202
[NLR-MP-86038-U] p 51 N88-10283

Criteria for determination of significant load cycles in variable amplitude load sequences
[NLR-MP-86013-U] p 51 N88-10386

Aerospace research at the National Aerospace Laboratory (NLR)
[ETN-87-90821] p 62 N88-10697

National Aerospace Lab., Tokyo (Japan).

Measurements in the functional mock up test of the NAL QSTOL aircraft control system
[NAL-TR-928] p 36 N88-10793

National Bureau of Standards, Gaithersburg, Md.

Test results and predictions for the response of near-ceiling sprinkler links in a full-scale compartment fire
[NBSIR-87-3633] p 50 N88-10209

National Cheng Kung Univ., Tainan (Taiwan).

Refined numerical solution of the transonic flow past a wedge
[N88-12280] p 14 A88-12280

National Physical Lab., Teddington (England).

Noise levels from propeller-driven aircraft measured at ground level and at 1.2 m above the ground
[NPL-AC-110] p 61 N88-10594

National Transportation Safety Board, Washington, D. C.

Aircraft accident reports, brief format, US civil and foreign aviation. Issue number 1: 1986 accidents
[PB87-916903] p 19 N88-10781

Naval Air Propulsion Test Center, Trenton, N.J.

Conceptual design of an optic based engine control system
[ASME PAPER 87-GT-168] p 30 A88-11079

NKF Engineering, Inc., Reston, Va.

Fiber optic engineering sensor system. Preliminary program management plan, phase 3 revision
[AD-A183663] p 62 N88-10608

Notre Dame Univ., Ind.

Low Reynolds number wind tunnel measurements - The importance of being earnest p 10 A88-11190
The structure of separated flow regions occurring near the leading edge of airfoils including transition
[NASA-CR-181434] p 16 N88-10011

O

Office of Naval Research, London (England).

International Conference on the Aerodynamics at Low Reynolds Numbers between 10(4) and 10(6)
[ONRL-7-023-C] p 16 N88-10010

P

Pratt and Whitney Aircraft, East Hartford, Conn.

Inter and intra blade row laser velocimetry studies of gas turbine compressor flows
[ASME PAPER 87-GT-235] p 7 A88-11126
Development of heat flux sensors for turbine airfoils p 54 N88-11143

Coolant passage heat transfer with rotation p 54 N88-11160

Verilog S.A., Toulouse (France).

Assessment of software quality for the AIRBUS A310 automatic pilot p 38 N88-10804

Virginia Univ., Charlottesville.

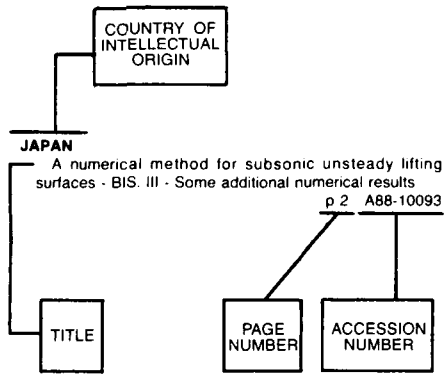

A smoke-wire study of low Reynolds number flow over a NASA LRN(1) - 1007 airfoil section p 9 A88-11181

FOREIGN TECHNOLOGY INDEX

AERONAUTICAL ENGINEERING / A Continuing Bibliography (Supplement 223)

February 1988

Typical Foreign Technology Index Listing

Listings in this index are arranged alphabetically by country of intellectual origin. The title of the document is used to provide a brief description of the subject matter. The page number and the accession number are included in each entry to assist the user in locating the citation in the abstract section. If applicable, a report number is also included as an aid in identifying the document.

A

AUSTRALIA

- The use of wind tunnel data in the design of radio controlled contest model sailplanes p 24 A88-11195
- A survey of aircraft integrated control technology [AR-004-561] p 37 N88-10794
- The influence of load cycle reconstitution on fatigue behaviour [ARL-STRUC-R-424] p 56 N88-11198

C

CANADA

- Compressor turbine vane ring (PT6 engine) repair development [ASME PAPER 87-GT-47] p 29 A88-10999
- Combustion gas properties. III - Prediction of the thermodynamic properties of combustion gases of aviation and diesel fuels [ASME PAPER 87-GT-49] p 40 A88-11001
- Three-dimensional calculation of wall boundary layer flows in turbomachines [ASME PAPER 87-GT-82] p 4 A88-11022
- A qualitative method for determining the temperature pattern of run gas turbine blades [ASME PAPER 87-GT-102] p 45 A88-11037
- Application of the transient test technique to measure local heat transfer coefficients associated with augmented airfoil cooling passages [ASME PAPER 87-GT-212] p 47 A88-11112
- An expert system for aircraft conflict resolution in dense airspace p 22 N88-10810
- Towards the unmanned cockpit p 25 N88-10812

CHINA, PEOPLE'S REPUBLIC OF

- Numerical solution of stream function equations in transonic flows [ASME PAPER 87-GT-18] p 3 A88-10983

A simplified method for 3-D potential flow in turbomachinery using vortex sheet boundary conditions [ASME PAPER 87-GT-28] p 3 A88-10989

A generalized numerical method for solving direct inverse and hybrid problems of blade cascade flow by using streamline-co-ordinate equation [ASME PAPER 87-GT-29] p 4 A88-10990

A new method of calculating optimum velocity distribution along the blade surface on arbitrary stream surface of revolution in turbomachines [ASME PAPER 87-GT-30] p 4 A88-10991

Investigation of integrated selection of optimum engine cycle parameters [ASME PAPER 87-GT-39] p 29 A88-10993

Experimental investigations of flows through a plane cascade at large angles of attack with separations [ASME PAPER 87-GT-96] p 5 A88-11035

Shock embedding discontinuous solution of elliptic equation for inverse problem of transonic S2 flow [ASME PAPER 87-GT-115] p 5 A88-11043

The performance estimation of transonic turbine at design and off-design conditions [ASME PAPER 87-GT-148] p 30 A88-11066

A discussion of the mean S2 stream surfaces applied to quasi-three-dimensional calculation programs for turbomachinery design [ASME PAPER 87-GT-150] p 5 A88-11067

Numerical computation of non-isentropic potential equations for transonic cascade flows [ASME PAPER 87-GT-159] p 5 A88-11071

Investigation of high-altitude ignition performance of several Chinese jet fuels with different properties [ASME PAPER 87-GT-178] p 41 A88-11086

A multi-grid algorithm for 2-D transonic potential cascade flow [ASME PAPER 87-GT-180] p 6 A88-11088

A new method (FTDCDF) for blade design of axial/mixed-flow compressors and its applications [ASME PAPER 87-GT-183] p 31 A88-11090

Calculation of aerodynamic heat transfer for blunt-nosed thin wings at different angles of attack at supersonic speeds [NASA-TT-20127] p 18 N88-10776

Investigation of control law for active flutter suppression [NASA-TT-20126] p 39 N88-10818

CZECHOSLOVAKIA

- The fourth generation of TL commercial aircraft p 23 A88-10656

E

EGYPT

- Computer predictions of erosion damage in gas turbines [ASME PAPER 87-GT-127] p 46 A88-11054
- Towards the design of an intelligent aerospace system [AIAA PAPER 87-2844] p 26 A88-12569

F

FRANCE

Three-dimensional flow in a rotor - A strictly three-dimensional calculation of flows in turbomachines using the S1-S2 method p 44 A88-10628

Experimental method for the combustion efficiency calculation in a reheat duct [ASME PAPER 87-GT-90] p 29 A88-11029

The turbomachine blading design achieved by solving the inverse field problem [ASME PAPER 87-GT-215] p 31 A88-11113

Airspeed measurement with a CO2 lidar p 26 A88-12655

Thin-film temperature sensors deposited by radio frequency cathodic sputtering p 50 A88-12903

Assessment of software quality for the AIRBUS A310 automatic pilot p 38 N88-10804

Knowledge Based Concepts and Artificial Intelligence: Applications to Guidance and Control [AGARD-LS-155] p 38 N88-10806

- Supersonic flow around a sphere in a thermal inhomogeneity p 2 A88-10264
- Necessary optimality conditions for three-dimensional bodies in supersonic gas flow p 2 A88-10300
- Extended systems of variable structure with mobile radio-communication objects p 44 A88-10726
- Fast stable solution of a dispersion equation of linear filtering p 21 A88-10728
- The accuracy-related parametric reduction of mathematical models p 58 A88-10929
- Numerical solution of coupled problems of supersonic flow past deformable shells of finite thickness p 13 A88-11280
- Computing complex for a system for the radio-acoustic sounding of the atmosphere - Hardware facilities p 58 A88-11394
- Strong gas injection into supersonic flow with turbulent mixing p 13 A88-12056
- Transonic expansions p 13 A88-12059
- Stability of supersonic flow of an ideal gas with a head shock wave past cylindrical channels and cavities p 13 A88-12065
- Oxygen recombination in a supersonic cooled flow p 13 A88-12071
- Effect of energy release in the shock layer on the supersonic flight of bodies p 13 A88-12073
- Analysis of supersonic heterogeneous flow impinging on an obstacle p 14 A88-12074
- Optimal lifting wings with required longitudinal balancing characteristics p 14 A88-12075
- Investigations in the history and theory of development of aerospace science and technology. Number 5 p 62 A88-12202
- Ensuring the service life of designs (experience in aircraft construction) p 1 N88-10986
- Turbines with counterrotating runners for aircraft power plants p 34 N88-10992
- Diagnosis of flow channel in aircraft gas-turbine engines on basis of vibration spectrum characteristics p 35 N88-10993

UNITED KINGDOM

- Sealing of a shrouded rotor-stator system with pre-swirl coolant [ASME PAPER 87-GT-72] p 45 A88-11016
- Numerical prediction of turbulent flow in rotating cavities [ASME PAPER 87-GT-74] p 45 A88-11018
- Correlations of fuel performance in a full-scale commercial combustor and two model combustors [ASME PAPER 87-GT-89] p 29 A88-11028
- Procedures for determining surface heat flux using thin film gauges on a coated metal model in a transient test facility [ASME PAPER 87-GT-95] p 45 A88-11034
- Prediction of combustion performance of aviation kerosines using a novel premixed flame technique [ASME PAPER 87-GT-125] p 41 A88-11052
- Spray performance of a hybrid injector under varying air density conditions [ASME PAPER 87-GT-155] p 46 A88-11068
- Modelling the unsteady flow in a turbine rotor passage [ASME PAPER 87-GT-197] p 7 A88-11101

The base pressure and loss of a family of four turbine blades
[ASME PAPER 87-GT-202] p 7 A88-11106

The United Kingdom engine technology demonstrator programme
[ASME PAPER 87-GT-203] p 31 A88-11107

Digital controls for gas turbine engines
[ASME PAPER 87-GT-211] p 31 A88-11111

Neutron and positron techniques for fluid transfer system analysis and remote temperature and stress measurement
[ASME PAPER 87-GT-219] p 48 A88-11116

A study of the effects of thermal barrier coating surface roughness on the boundary layer characteristics of gas-turbine aerofoils
[ASME PAPER 87-GT-223] p 48 A88-11120

Boundary layer profile investigations downstream of an aero-engine intake anti-icing air exhaust slot
[ASME PAPER 87-GT-237] p 32 A88-11127

Gas turbine exhaust systems - Design considerations
[ASME PAPER 87-GT-238] p 32 A88-11128

Aerodynamics at low Reynolds numbers Re greater than 10 to the 4th and less than 10 to the 6th; Proceedings of the International Conference, London, England, Oct. 15-18, 1986. Volumes 1, 2, & 3 p 8 A88-11176

A simple method for the prediction of separation bubble formation on aerofoils at low Reynolds number
p 8 A88-11179

On the determination of the 2-D characteristics of aerofoils at low Reynolds numbers p 10 A88-11192

Wind tunnel testing of small scale pressure tapped model propellers p 32 A88-11196

The calculation of flow about aerofoils at low Reynolds number with application to remotely piloted vehicles
p 11 A88-11197

Prediction of a microlight biplane's aerofoil performance using a computer model p 11 A88-11198

An experimental investigation of the aerodynamics of the hang glider p 11 A88-11200

The aerodynamics of gliding parachutes
p 11 A88-11201

Preliminary measurements of the flight performance of an RPV compared with wind tunnel and CFD estimates
p 12 A88-11203

Aerodynamics of unmanned aircraft at full-scale in the RAE 24ft wind-tunnel p 12 A88-11204

The performance of model aircraft using flow invigorators, gliding in the critical range of Reynolds number p 12 A88-11206

Wind-tunnel test results of Eppler 387 aerofoils and comparisons with flight test and computation
p 12 A88-11208

Flight simulation p 39 A88-11470

The conflict resolution process for TCAS II and some simulation results p 21 A88-12474

Conference on Mechanical Behaviour of Superalloys, London, England, June 10, 11, 1986, Selected Papers
p 42 A88-12626

Mechanical property requirements for aero gas turbine materials p 42 A88-12628

High-temperature sheet materials for gas turbine applications p 42 A88-12635

Optical systems for gas turbine engines
p 49 A88-12657

An uncooled linescan thermal imager for ground and airborne use p 49 A88-12840

A compact high performance thermal imager
p 50 A88-12843

Elastic buckling of internally pressurized cylinder-bulkhead combinations p 50 A88-12949

Dispersion in the wake of aircraft: An investigation of the effects of a ground plane on trailing vortices. Literature survey
[IC-AERO-REP-86-04] p 16 N88-10014

On the prospects for increasing dynamic lift
[RAE-TM-AERO-2068] p 17 N88-10018

Investigation of the suitability of the 8ft x 6ft transonic wind-tunnel for aeroacoustic research on propellers
[RAE-TM-AERO-2093] p 39 N88-10041

Steering mechanism
[EP-PATENT-0-181-700-A1] p 51 N88-10338

The fatigue properties of aerospace steels under constant amplitude and flight-by-flight simulated loading
[BAE-MSM-R-GEN-0566] p 51 N88-10377

Activities report of the Institute of Sound and Vibration Research
[ETN-87-90685] p 61 N88-10589

Noise levels from propeller-driven aircraft measured at ground level and at 1.2 m above the ground
[NPL-AC-110] p 61 N88-10594

The deviation of light rays passing through a curved windscreen
[BAE-MSM-115] p 62 N88-10610

Decoupling and stabilization of speed and height in F4 Phantom aircraft using output feedback
[ETN-87-90926] p 25 N88-10787

The wide chord fan blade: A Rolls Royce first
[PNR90416] p 34 N88-10789

A preliminary investigation into the feasibility of implementing a direct sideforce control system on the Astra Hawk by means of an active control surface
[ETN-87-90924] p 37 N88-10795

Some approaches to the design of high integrity software p 37 N88-10799

Investment foundry melting stock. Rolls Royce requirements and demands in terms of quality and the relationship to end product performance
[PNR90397] p 52 N88-11003

Boundary layer profile investigations downstream of an aero-engine intake anti-icing air exhaust slot
[PNR90378] p 52 N88-11080

Optical flow diagnostic measurements in turbomachinery
[PNR90396] p 52 N88-11081

Transmission efficiency in advanced aerospace powerplant
[PNR90391] p 53 N88-11133

The use of Kevlar on aero-engine fan containment casings
[PNR90410] p 53 N88-11134

AERONAUTICAL ENGINEERING / A Continuing Bibliography (Supplement 223)

February 1988

Typical Report Number Index Listing

Listings in this index are arranged alphabetically by report number. The page number indicates the page on which the citation is located. The accession number denotes the number by which the citation is identified. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

ACCESSION NUMBER INDEX

AERONAUTICAL ENGINEERING / A Continuing Bibliography (Supplement 223)

February 1988

Typical Accession Number Index Listing

Listings in this index are arranged alpha-numerically by accession number. The page number listed to the right indicates the page on which the citation is located. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

AVAILABILITY OF CITED PUBLICATIONS

IAA ENTRIES (A88-10000 Series)

Publications announced in *IAA* are available from the AIAA Technical Information Service as follows: Paper copies of accessions are available at \$10.00 per document (up to 50 pages), additional pages \$0.25 each. Microfiche⁽¹⁾ of documents announced in *IAA* are available at the rate of \$4.00 per microfiche on demand. Standing order microfiche are available at the rate of \$1.45 per microfiche for *IAA* source documents and \$1.75 per microfiche for AIAA meeting papers.

Minimum air-mail postage to foreign countries is \$2.50. All foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to: Technical Information Service, American Institute of Aeronautics and Astronautics, 555 West 57th Street, New York, NY 10019. Please refer to the accession number when requesting publications.

STAR ENTRIES (N88-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code preceded by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on NTIS PRICE SCHEDULES.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report number* shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, as indicated above, for those documents identified by a # symbol.)

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26.1 reduction).

- Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)
- Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.
- Avail: ESDU. Pricing information on specific data, computer programs, and details on ESDU topic categories can be obtained from ESDU International Ltd. Requesters in North America should use the Virginia address while all other requesters should use the London address, both of which are on the page titled ADDRESSES OF ORGANIZATIONS.
- Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).
- Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.
- Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Documents Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.
- Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.
- Avail: US Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of \$1.50 each, postage free. (See discussion of NASA patents and patent applications below.)
- Avail: (US Sales Only). These foreign documents are available to users within the United States from the National Technical Information Service (NTIS). They are available to users outside the United States through the International Nuclear Information Service (INIS) representative in their country, or by applying directly to the issuing organization.
- Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this Introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.
- Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC: NASA and NASA-sponsored documents and a large number of aerospace publications are available to the public for reference purposes at the library maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

EUROPEAN: An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England for public access. The British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy or microfiche of NASA and NASA-sponsored documents, those identified by both the symbols # and * from ESA – Information Retrieval Service European Space Agency, 8-10 rue Mario-Nikis, 75738 CEDEX 15, France.

FEDERAL DEPOSITORY LIBRARY PROGRAM

In order to provide the general public with greater access to U.S. Government publications, Congress established the Federal Depository Library Program under the Government Printing Office (GPO), with 50 regional depositories responsible for permanent retention of material, inter-library loan, and reference services. At least one copy of nearly every NASA and NASA-sponsored publication, either in printed or microfiche format, is received and retained by the 50 regional depositories. A list of the regional GPO libraries, arranged alphabetically by state, appears on the inside back cover. These libraries are *not* sales outlets. A local library can contact a Regional Depository to help locate specific reports, or direct contact may be made by an individual.

STANDING ORDER SUBSCRIPTIONS

NASA SP-7037 and its supplements are available from the National Technical Information Service (NTIS) on standing order subscription as PB 88-914100 at the price of \$8.50 domestic and \$17.00 foreign. The price of the annual index is \$14.50. Standing order subscriptions do not terminate at the end of a year, as do regular subscriptions, but continue indefinitely unless specifically terminated by the subscriber.
